As explained above, the CBP and the other relevant agencies have not updated their processes to allow for individuals to easily file Electronic Export Information in the AES. Given that they are aware of the issues, have had more than three years to fix them, and have made no discernable progress in that direction, there is no reason to believe they will do so by the time the proposal is published as a final rule.

The NRA is unaware of any compelling security need to change the status quo. The very fact that the systems have not been updated to address the outstanding issues would seem to indicate CBP and DHS agree. Simply put, there has been no urgency to facilitate AES filings by private travelers. The Form 4457 procedure has proven to be a workable system both before and since the 2012 rule change, and it can continue to suffice for the near term.

The paper Form 4457 also serves an important function for some U.S. travelers to foreign countries that require a valid "firearm license" from visitors' home countries. Neither the U.S. government nor most U.S. states generally license the acquisition or simple possession of firearms, especially long guns. But foreign officials in these countries have historically accepted the Form 4457 as fulfilling this requirement.

It is also relevant that BIS has throughout the relevant time period always allowed for the temporary export of shotguns and shotgun shells under its jurisdiction via the baggage exemption of 15 C.F.R. § 740.14 without requiring a declaration to be filed in the AES. Indeed, that exemption currently does not specifically require the use of the Form 4457 procedure, either. Codifying the Form 4457 procedure would therefore help promote consistency and understanding across the different agencies involved in enforcing the nation's export rules and with the traveling public. The president's determination that certain additional firearms and ammunition no longer warrant control under the USML more strongly argues in favor of BIS adopting its own procedures for their temporary export than for importing procedures from the ITAR into the EAR.

CBP can also issue its own rulemaking on procedures for temporary exports by private travelers, should the state of play change with respect to the practical and technological issues of the AES. The issue could then be fully vetted in its own right. There is no reason, however, to inject this thorny issue into the larger project of Export Reform. It is not necessary nor helpful to the objectives of Export Reform, and it would perpetuate a problem one solution to which has already been identified (i.e., the paper Form 4457 procedure).

- E. Private travelers exporting a personal firearm they temporarily imported into the U.S. for lawful purposes should not be required to use AES for this purpose.

The same problems that arise from requiring U.S. persons to file declarations through the AES to take advantage of the BAG exemption apply to requiring foreign visitors traveling to the U.S. with their own firearms to use the AES to avail themselves of the TMP exception. This is not necessary under the current version of 15 C.F.R. § 740.9, and it should not be added to that section or to § 758.1.

Currently, foreign visitors traveling to the U.S. with their own firearms must apply for an import permit from the Bureau of Alcohol, Tobacco, Firearms & Explosives using ATF Form 6NIA. The individual will also have to substantiate his or her eligibility to possess a firearm in the United States as a non-U.S. person (for example, by obtaining a hunting license from a U.S. state). The travelers must then declare their firearms at the border, provide CBP officials with any required documents, and maintain the required documents during the duration of their stay. Customs officials in the country of re-importation can use the ATF Form 6NIA to confirm that the individual is returning with the same firearms that were brought to the U.S.

We are unaware of any attempt on DDTTC's part to enforce a requirement that foreign visitors (including from Canada) declare the "export" of firearms they temporary brought to the U.S. for lawful purposes through the AES when the visitor returns home. Indeed, it is difficult to understand how doing so would contribute to national security. Thanks the Second Amendment and America's unique commitment to individual liberty, the U.S. has by far the largest civilian stock of firearms in the world.²¹ Given the ready availability of firearms in the U.S. as compared to the rest of the world, there is little chance that America's interests are seriously threatened by foreign visitors bringing their own lawfully obtained guns into the country. At the very least, they are not threatened enough to impose a bureaucratic requirement for private foreign travelers that has already proven unworkable for their U.S. counterparts.

For these reasons, we urge BIS to omit from §§ 740.2 and 758.10 the AES declaration requirement as applied to private foreign travelers temporarily bringing personal firearms into the U.S. Foreign hunters and competitive shooters help contribute to the U.S. economy, and these proposed changes would discourage them from doing so. Meanwhile, reports of foreign travelers committing crimes in the U.S. with firearms they lawfully brought with them are vanishingly rare.

II. The expanded data elements necessary for AES filings exacerbate the problems for private travelers forced to use the system and violate the spirit of Congressional prohibitions against federal firearm registries.

The proposal would "expand the data elements required as part of an AES filing for [firearms transferred from the USML] to include serial numbers, make, model and caliber," including for those wishing to use the BAG and TMP exemptions. This makes the previously mentioned problems with AES filing that much worse. It also runs counter to the spirit of clearly

²¹ Lederer, *supra* note 2.

established Congressional policy against using bureaucratic record-keeping requirements to establish firearms registries.

Firearm registries have long been anathema to gun owners as a tool that can be used to target them for discrimination and for the eventual seizure of their firearms. History is rife with examples of tyrants who used civilian disarmament to further their despotic ends,²² and America's own Revolutionary War began in earnest after a British raid on Colonial arms caches. Against this backdrop, federal gun control laws have consistently maintained a policy against national registries of the sorts of common arms with which Americans typically exercise their Second Amendment rights.²³

Congress, in enacting the Gun Control Act of 1968 (GCA), specifically declined to create a federal firearm registry, despite the urging of President Lyndon B. Johnson to do so.²⁴ Both the House and the Senate voted down proposals to require registration of guns as the legislation made its way through Congress.²⁵ As Sen. James McClure later stated,

The central compromise of the Gun Control Act of 1968—the sine qua non for the entry of the Federal Government into any form of firearms regulation was this: Records concerning gun ownership would be maintained by dealers, not by the Federal Government and not by State and local governments.^[26]

Congress then amended the GCA in 1986 to prohibit any rule or regulation enacted under its auspices from using the records that federal firearm licensees must keep to establish “any system of registration of firearms, firearms owners, or firearms transactions or dispositions”²⁷

When the Brady Handgun Violence Protection Act of 1993²⁸ created the authority for the National Instant Criminal Background Check System (NICS), Congress took pains to ensure the system would not circumvent the GCA's policy against firearm registration. The Act states that if the NICS determines receipt of a firearm would not be in violation of law, it shall “destroy all records of the system with respect to the call (other than the identifying number and the date the

²² See, e.g., STEPHEN HALBROOK, GUN CONTROL IN THE THIRD REICH, DISARMING THE JEWS AND “ENEMIES OF THE STATE” (Independent Inst. 2013).

²³ The National Firearms Act, 26 U.S.C. §§ 5801-5872, requires federal registration of limited categories of arms, but to the extent it covers firearms, those guns— which include machineguns, short-barreled shotguns, short-barreled rifles, and non-sporting firearms greater than .50 caliber — are comparatively rare among the U.S. civilian firearm stock.

²⁴ See Lyndon B. Johnson, “Remarks Upon Signing the Gun Control Act of 1968,” Oct. 22, 1968, available at <http://www.presidency.ucsb.edu/ws/?pid=29197> (last visited July 6, 2018).

²⁵ 114 Cong. Rec. H22267 (daily ed. July 19, 1968); 114 Cong. Rec. S27420-421 (daily ed. Sept. 18, 1968).

²⁶ 131 Cong. Rec. S9163-64 (July 9, 1985).

²⁷ 18 U.S.C. § 926(a).

²⁸ Pub. L. No. 103-159, 107 Stat. 1536 (1993).

number was assigned) and all records of the system relating to the person or the transfer.”²⁹ Section 103(i) of the Act contains additional prohibitions against the use of the system to create a federal firearms registry:

No department, agency, officer, or employee of the United States may—

(1) require that any record or portion thereof generated by the system established under this section may be recorded at or transferred to a facility owned, managed, or controlled by the United States or any State or political subdivision thereof; or

(2) use the system established under this section to establish any system for the registration of firearms, firearm owners, or firearm transactions or dispositions except with respect to person, prohibited by section 922 (g) or (n) of title 18, United States Code State law, from receiving a firearm.^[30]

Beginning in 1979, the annual appropriations bills that funded the ATF and its predecessor agency prohibited the Department of Justice from centralizing the records of federal firearm licensees (FFLs), until the prohibition was made permanent in 2011.³¹ Also made permanent in that 2011 appropriations bill was another rider that prohibited the ATF from compiling a searchable registry of gun buyers’ names from business records transferred to the agency by FFLs who ceased doing business.³² A third provision in the same bill permanently created a 24-hour deadline for the destruction of identifying information on those who successfully undergo a NICS check.³³

Even Obamacare contains a number of provisions that prohibit information collected under its authority from being used to create firearm registries.³⁴

Meanwhile, there is no express authority in the enabling act under which this rulemaking is promulgated for BIS to collect and retain detailed information on the firearms owned by law-abiding Americans. Yet BIS is proposing to compel Americans to enter identifying information about themselves and their firearms into a federal database as a precondition of engaging in lawful travel with firearms. Individuals forced to comply with this requirement are given no assurances about how the information will be retained or protected or whether it will be available to other entities, and if so, under what circumstances. This clearly runs contrary to the spirit of congressional policy governing the handling of firearm owner information.

²⁹ 18 U.S.C. 922(f)(2)(C).

³⁰ 107 Stat. at 1542.

³¹ Consolidated and Further Continuing Appropriations Act, 2012, Pub. L. No. 112-55, 125 Stat. 552, 609 (2011).

³² 125 Stat. 552, 610.

³³ *Id.* at 632.

³⁴ Patient Protection and Affordable Care Act, Pub. L. No. 111-148, 124 Stat. 119, 884-5 (2010).

The *de facto* federal firearm registry that would be created by forcing private gun owners to make detailed declarations about themselves and their firearms via the AES is another argument in favor of retaining the current procedure utilizing the paper Form 4457. That procedure vindicates the government's legitimate interest in monitoring the firearms that move and in out of the country but does not require the government to maintain a central registry of firearm owner information.

Going forward, any further attempt to automate the information private travelers must provide about their personal firearms should include express privacy provisions. At a minimum, these should prevent the dissemination or transfer of the information to other entities and require its complete destruction once CBP has verified that the firearms which were temporarily exported have been returned to the U.S.

For all these reasons, the NRA objects to the proposal's use of expanded data elements for private travelers seeking to utilize the BAG or TMP exceptions and urges that those requirements be omitted from the final rule.

III. The Final Rule Should Take Effect Immediately to the Extent Requirements Are Eliminated and Phase in Other Changes to Allow Regulated Entities Time to Adapt.

When the final rule governing Categories I, II, and III of the USML is published, certain changes should take effect immediately, while others should be phased in to allow regulated entities time to adapt.

Changes that merely eliminate requirements altogether should take effect immediately. For example, there is no justification for continuing to make "manufacturers" of articles that would be moved off the USML register with the Department of State.

On the other hand, where control of an item changes from the USML to the CCL, necessitating new procedures by the regulated entity, implementation of the final rule's effective date should be delayed to allow for new compliance systems to be established.

Licenses already granted under the ITAR should also be grandfathered for all outstanding transactions.

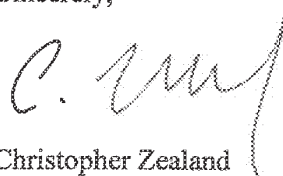

The NRA does not have any specific recommendations for a timeline of implementation for enforcing new requirements and procedures. We will defer to the entities whose day-to-day operations will be directly affected by the changes in the final rule.

Conclusion

The NRA is very pleased to see Export Reform finally turn its attention to Categories I, II, and III of the USML. The proposal charts a positive course that will contribute to national security, enhance the competitiveness of U.S. businesses, and benefit ordinary gun owners by mitigating the potential for export regulations to burden innocent conduct that does not implicate national security. We hope you will take the suggestions offered herein seriously to further promote the worthy goals of this effort, and we appreciate the opportunity to provide input.

We have also included our submission on the Directorate of Defense Trade Control's companion rulemaking and incorporate those comments herein by this reference.

Sincerely,

A handwritten signature in black ink, appearing to read "C. Zealand", with a stylized flourish extending from the end.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

U.S. firearms exported to Mexican police have been used in massacres and forced disappearances. We need international background checks to prevent gun exports to military and private groups that use them to commit violence or collude with organized crime.

At the core of these proposed changes is the mistaken belief that firearms do not merit tighter control because they are neither high-tech nor provide unique military advantages. In reality, these are some of the weapons most often used to commit abuses and extend conflict around the world. As such they deserve our highest scrutiny, not an easier path for sale and one without Congressional oversight. The policy continues the wrong-minded approach of the Trump administration to treat weapons as any other trade commodity, threatening to undermine long-term global security and true U.S. national security interests.

"The Trump administration's decision to relax regulations on the export of firearms will make it easier for terrorists, tyrants and criminal gangs to get their hands on the same dangerous firearms that have been used in mass shootings in the United States. This is a victory for the NRA and the gun industry and a loss for everyone else. Relaxing regulations on many firearms by putting them under the jurisdiction of the Commerce Department rather than the Department of State will make it harder to track where these weapons end up, and therefore easier for them to be diverted into the wrong hands. To make matters worse, Congress would no longer even be notified of major firearms exports, making it harder to do things like limit sales to the police in the Philippines who have been involved in assassinations of their own citizens -- as Sen. Ben Cardin, who blocked such sales in the past, has noted.

O, let America be America again --
The land that never has been yet --
And yet must be -- the land where every [one] is free.
Langston Hughes, Let America Be America Again

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting

made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Thank you for taking action to help make our country and our world a safer place.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military yet semi-automatic rifles are used in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns as well as any larger caliber firearm. Six U.S. states, DC, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by Congress to regulate the export of arms as the rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons which will limit its ability to comment on related human rights concerns, as it recently did on Philippines and Turkey. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017 letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. The government taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking which will make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls for gun exports and would eliminate the State Departments

Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale but the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I generally oppose regs that would make it easier to export guns from the US so I oppose any changes to current rules and regs.

Ex, Congress no longer being notified about large weapons sales is not acceptable.

The changes would present fewer obstacles for crime organizations to purchase large caches of weapons. Removing liscensing requirements is also a problem in my opinion.

None of the rule changes are acceptable and I urge you to oppose them.

Thank you

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Firearms are dangerous! They are used to kill people every day around the world in acts of terrorism, organized crime, political violence and human rights violations. They should be subject to more controls, not less. The Commerce Department does not have the resources to adequately enforce export controls.

This rule change would remove essential safe safeguards that help keep extra-legal agents from obtaining the weapons that fuel violence that destabilizes countries and causes mass migration.

Please do the right thing and forgo this disastrous rule change.

I do not support switching the regulation of firearms exports from the State Department to the Commerce Department. This change facilitates exporting firearms to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Is America into making money for arms deals, or are we for stabilizing the nations on this earth, reaching for democratic peace for all.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department.

The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

General Comment

As a concerned citizen, I oppose the NRA's push to move export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. I believe this transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Right now, firearms exports are classified as military", which allows Congress to block sales of large batches of firearms to foreign countries. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. In addition, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Finally, this rule change would eliminate some very important State Department programs, including; the State Departments Blue Lantern program, the licensing program for brokers, and the block on 3D printing of firearms. The bottom line is that firearms are extremely dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

The proposed rule change:

- * Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- * Eliminates Congressional oversight for important gun export deals.
- * Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- * Removes statutory license requirements for brokers, increasing risk of trafficking.
- * Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- * Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- * The Commerce Department does not have the resources to enforce export controls, even now.
- * Reduces transparency and reporting on gun exports.
- * Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Please make sure that the proposed rule change DOES NOT:

Treat semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminate Congressional oversight for important gun export deals.

Transfer the cost of processing licenses from gun manufacturers to taxpayers.

Remove statutory license requirements for brokers, increasing risk of trafficking.

Reduce or eliminate end-use controls, such as State Depts Blue Lantern program, or eliminates registration of firearms exporters.

Enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Give the Commerce Department the responsibility to enforce export controls over semi-automatic assault rifles.

Reduce transparency and reporting on gun exports.

Transfer gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

If this proposed rule reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and eliminates registration of firearms exporters, a requirement since the 1940s, we will contribute to instability and threats to safety in other countries. That will only add to the need for immigrants and those seeking asylum in our country to flee their dangerous situations. Increasing the risk of arms trafficking is never in our best interests nor those of countries to which we export.

General Comment

This new rule would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international terrorists and criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of the gun industry. I am appalled at this administrations capitulation to the gun lobby which is now turning to the international market as gun sales decline in the US. I am concerned that the proposed rule does not adequately address our national security, foreign policy, international crime and terrorist threats. Congress and the public must be able to understand the impact of these rules on potential firearm exports. The proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

We shouldn't have assault style weapons available to individuals at home or abroad as they were designed as weapons of war, and as such should be restricted to military use. Why facilitate deranged parties acts of mass murder whether it be at home ore elsewhere?

I oppose this regulation change. The only parties who stand to benefit are arms manufacturers. Meanwhile, the lax enforcement capabilities of the Department of Commerce will make it easier for US made arms to find their way into the hands of people who would use them against us.

General Comment

I oppose the proposed change of export licencies from the State Department to the Commerce Department. This transfer includes assault weapons and other powerful firearms and will make it easier to export U.S. guns and ammunition globally. These exported firearms are already being used in crimes, attacks and human rights violations in many other nations.

A change to the Commerce Department will increase the number of export applicants by 10,000 annually, according to the Dept. of Commerce estimates. This change will only benefit the arms business, and cause many more deaths and destruction worldwide.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. What is the purpose of making this change -- the export of many more firearms, including weapons of mass murder? Isn't it enough that America is drenched in privately-owned guns -- including assault rifles -- and suffers from the highest rates of gun violence and gun deaths in the world -- by a mile? We want to infect the rest of the world with our unique kind of insanity? Well I say "NO we do not!"

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Dear sir

I am writing to oppose the proposed changes to the regulation of domestic Firearm sales to foreign purchasers. The United States has supplied weapons to foreign groups in the past only to have those same weapons used against our own military personnel. Mistakes were made in the past but I would rather arms sales were regulated by the State Department whose aim is to protect the safety of our nation. The Commerce Department has a goal of increasing our sales and isn't tasked with determining whether those sales constitute a future danger to our country.

I urge the Commerce and State Departments to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

Please, please no! I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

I strongly oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates critical Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives. This change seems poorly thought out and completely unnecessary.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The public needs MORE information not less about firearms both domestically and internationally.

The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I think the level of criminality in Central America and Mexico has been partially enabled by guns from the USA ending up in gangs and drug cartels. This has also encouraged the surge in Asylum seekers. Lets not make gun sales easier.

I join all those Americans who ask you to reject this proposed rule.
This proposal would make it easier to export U.S. guns and ammunition globally, even though U.S.-exported firearms are already used in many crimes, attacks and human rights violations in many other nations.

There are many problems with this proposal, including it:
Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.
Transfers the cost of processing licenses from gun manufacturers to taxpayers.
Removes statutory license requirements for brokers, increasing risk of trafficking.
Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
The Commerce Department does not have the resources to enforce export controls, even now.
Reduces transparency and reporting on gun exports.
Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

PLEASE REJECT THIS PROPOSAL!

General Comment

I am a retired social worker, mother of three and active voter and community member. I am all too aware of the devastation that gun violence has exacted on our communities here in the US. I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

The State Department should continue to control firearms.

Firearms are classified as "military" for a good reason, and their regulation is much more appropriate under the State Department than the Department of Commerce.

Firearms are in need of much more regulation that they are currently, and that regulation should remain under the State Department.

The Commerce Department does not have the resources adequately to enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Firearm exports should continue to be regulated by the State Department. There is a compelling reason they are, and have long been, regulated by State.

Name: John Black

General Comment

I am a parent, educator, retiree and my wife and I oppose the proposed rule for the following reasons: The proposed rule treats semi-automatic assault rifles as non-military. But many groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, DC, and several large retail chains also prohibit retail sale of semi-automatic assault rifles.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. Senators have explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. Taxpayers will absorb the cost of reviewing applications and processing licenses.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

The rule reduces controls for gun exports. It would eliminate the State Departments Blue Lantern

program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.

Thank you.

I respectfully request that this proposed rule change be defeated. Among the reasons are that it

- 1.Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- 2.Eliminates Congressional oversight for important gun export deals.
- 3.Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- 4.Removes statutory license requirements for brokers, increasing risk of trafficking.
- 5.Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- 6.Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- 7.The Commerce Department does not have the resources to enforce export controls, even now.
- 8.Reduces transparency and reporting on gun exports.
- 9.Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Points 1 and 9 above are especially compelling. We definitely should not export our gun violence problems to the rest of the world.

This country cannot even control what is going on here with our homegrown terrorists & these guns, especially the weapons used by our military & designed for our military like the AR-15. The President appeases the gun lobby with these ideas, but that is just a fraction of the population & only serves his political purposes. We need to get our house in order. Contrary to Mr. Trump's opinion the United States does not need to be like Russia. He wouldn't even need to come up with schemes like this for trade, had he not alienated our closest allies like Canada who we had a trade deficit with, they spent more money here than we did there. I'm praying that someone who works in this government now & has control, uses common sense in this case & acts responsibly.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

the proposed rule change:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world as this is how they make money. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

With the proposed rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns. Moreover, the Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. Thus, firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Additionally, the rule change would make the world a more dangerous place for the following reasons: It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

In summary, firearms are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

The problem with indiscriminately arming nations is like the weather: If you like a current regime, wait a decade or two and it will change--often to one opposed to the United States. Accordingly, the decision whether to arm a regime is better assessed by the State Department than the Commerce Department, whose emphasis is promoting trade. The proposed rule is short-sighted and should be rejected.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

The rule change would make the world a far more dangerous place:

- by eliminating the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- by removing licensing requirements for brokers, increasing the risk of trafficking.
- by removing the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please leave the regulation of firearms exports under the jurisdiction of the State Department.

Thank you.

I strongly oppose moving firearm export license oversight from the State Department to the Commerce Department. This rule change would eliminate necessary and crucial Congressional oversight for gun export deals, enable the 3D printing of firearms and allow weapons of war to more easily proliferate throughout the world. This rule change increases profits to the American gun industry while the entire world will pay the cost in lost lives.

I want to make these points about the proposed rule:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I oppose switching the regulation of firearms exports from the State Department to the Commerce Department because it would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Exports such as these belong to the State Department to handle. This is not commerce - this is exploitation by a lobbying organization to spread its influence around the world without regard to public safety. We need to reduce gun violence. Changing this regulation from the U.S. State Department to the U.S. Commerce Department effectively increases gun violence. This MUST NOT HAPPEN.C

I am opposed to moving the authority to regulate export of firearms from the State Department to the Commerce Department. I think the State Department is better equipped to review proposals to ship exports of firearms and is in a better position to block such exports to rogue countries where they could be used by the authorities to stifle people's right to protest against the government. We need to be very careful of whom we export dangerous firearms to and the State Department is better equipped to do that.

I oppose the NRA-proposed rule change to move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department.

The State Depts mission is to safeguard our nation; the Dept of Commerces mission is to promote American business.

Firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Additional threatening effects of the rule change:

1. It will eliminate the State Departments Blue Lantern program, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them;
2. It will remove licensing requirements for brokers, increasing the risk of trafficking;
3. It will remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe.

PLEASE DO NOT LET THIS RULE CHANGE TAKE EFFECT. Our national security is more important than the profits of gun manufacturers.

This seems like a particularly bad idea to me. These firearms are not only for the hunting enthusiast and hobbyist, but are used as weapons of conflict across the world. That would be the purview of the State Department, not the Commerce Dept. I respect the right of American citizens to own guns, but I do not want to provide the gun industry any greater latitude in their lucrative business of selling weapons around the world.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

As a taxpaying, American citizen I am vehemently opposed to this proposed rule change to move the handling of export licenses of semi-automatic assault-type weapons and other powerful firearms to the US Commerce Department.

This is foolhardy and clearly not in the interests of national security. Such a move would mean Congress would not be automatically informed of the sale of large caches of firearms to foreign countries. No prudent person would think giving private arms companies the go-ahead to sell dangerous weapons overseas without proper vetting is a good idea.

Largely unregulated arms sales could endanger our national interests and security. Lack of oversight would permit arms sales to anyone, including our enemies. Furthermore, why would we want to threaten world stability and undermine our own global diplomacy as well as that of our allies?

I think that trail leads to the National Rifle Association and its lobbyists. This transfer of authority must not be approved; to do so, is to embrace an unethical and inhumane practice which will only smear our international reputation and harm our diplomatic efforts for peace. Please retain administration of export licenses with the State Department. Peace over profits.

he bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Extensive trafficking in firearms contributes to violence around the globe. The world is awash in firearms, particularly military style weapons. Many weapons end up in the hands of pirates, terrorists, criminals and poachers. Wildlife poaching is a major cause of loss of wildlife. We do not need to make it easier to transport firearms around the world. We should be making it more difficult.

Firearms exports are increasing the danger that people and animals face around the planet. We need to work to actively reduce the amount of firearms not make it easier to export them.

I oppose this proposal for all the following reasons as well as those I have outlined above.

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic

assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control.

General Comment

I strongly oppose moving oversight of firearm export licensing from the Department of State to the Department of Commerce.

The proposed rule change treats semiautomatic weapons as "non-military," which is absurd. Moreover, the proposed rule eliminates Congressional oversight of gun export deals, transfers the cost of processing licenses from gun manufacturers to tax payers, and enables unchecked gun production in the U.S. and exports abroad by removing the block of 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I am writing in response to the proposed policy to make it easier to export U.S. guns and ammunition globally and the move of export licensing from the State Department to the Commerce Department. We do not need to make it easier to export guns. There are enough in the world. The only reason for this proposed changes is to benefit the gun lobby. Here are other reasons why this should not happen:

- It treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- It eliminates Congressional oversight for important gun export deals.
- It transfers the cost of processing licenses from gun manufacturers to taxpayers.
- It removes statutory license requirements for brokers, increasing risk of trafficking.
- It enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- It reduces transparency and reporting on gun exports.
- It transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

All of these reasons make this policy change ridiculous and terrifying. Please please do not allow this policy to go through. We have enough gun violence all over the world. Why create an even easier path to gun violence and human rights violations?

Thank you,
Meredith Roach

I OPPOSE the proposal. It would make America LESS SAFE. The proposal weakens controls over semiautomatic assault weapons including AR-15s and AK-47s, 50 caliber sniper rifles, and high-capacity ammunition magazines. It may also deregulate 3D printing of guns and could ultimately weaken controls on firearm imports. The proposed transfer will likely lead to more U.S. guns getting into the hands of criminal organizations, human rights abusers, and terrorist groups. The proposed rules are a priority for the National Rifle Association and the National Shooting Sports Foundation (the official trade association for the firearms industry) who want to open up international markets to compensate for lagging domestic gun sales.

This rule change would make the world a more dangerous place.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The oversight is necessary for gun export deals, to make sure these firearms don't just go to the highest bidder, ie. terrorists and criminals. Plus this will have the US taxpayer on the hook for the costs of processing! It enables 3D printing of firearms as well.

No to this BS!

I am writing to voice my strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms more dangerous by transferring controls to an agency that prioritizes business interests over national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also concerning. This rule seems designed to create profits for the U.S. gun industry. The rules description of semiautomatic assault rifles like the AR-15 as civilian products is also concerning. These weapons were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. Please do not go forward with this dangerous policy.

I am speaking out against the proposed policy of exporting ammunition and guns globally from the United States. We have a culture of war. Providing weapons to facilitate the ease of war is not in anyone's best interest. The proposed rule changes do the following, and are of grave concern:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

This is a dangerous proposal and should be squashed immediately.

I am opposed to the Trump administration proposed to make it easier to export U.S. guns and ammunition globally, even though U.S.- exported firearms are already used in many crimes, attacks and human rights violations in many other nations. These are the reasons that I am concerned:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

The Trump administration proposal applies to assault weapons and other powerful firearms, moving export licenses from the State Department to the Commerce Department. The U.S. gun lobby has advocated for these policies. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually. The fact that this proposal applies to assault weapons and other powerful firearms typically used in the military is concerning in that terrorist organizations may be able to easily get their hands on these weapons. We do not need to increase the potential use of weapons whether they are here or exported abroad. Thank you for your consideration of this serious matter.

I am writing in support of this proposal. The current ITAR regulations, as imposed upon gunsmiths, are stifling to business. The modern gunsmith will perform tasks such as barrel replacement, muzzle threading, and other tasks that do not make him a manufacturer by the common definition of the word, but subject him to manufacturer regulations and fees. The overwhelming majority of these small businesses operate on very thin margins as a general rule anyway, and most will never export a single product outside the US. To include common sporting rifles like the Remington 700 or even the semi-automatic AR15 under this regulations is simply ludicrous and needs to be changed. Ignore the comments in opposition, not one of them knows what they are talking about, they simply oppose this common sense measure because it will benefit 2nd Amendment advocates.

International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III

Document: DOS-2017-0046-2776

Comment on DOS-2017-0046-0001

Submitter Information

Name: Suzanna Bortz

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security. The Commerce Department does not have the resources to adequately enforce export controls.

General Comment

I oppose the proposed rule change because it will do the following:

- Treat semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminate Congressional oversight for important gun export deals.
- Transfer the cost of processing licenses from gun manufacturers to taxpayers.
- Remove statutory license requirements for brokers, increasing risk of trafficking.
- Reduce or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduce transparency and reporting on gun exports.
- Transfer gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Please oppose the proposed rule change. This matter was brought to my attention by Texas Gun Sense. Our country does not need reckless laws and rule changes such as these that undermine common sense gun safety. Thank you.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

Please do not loosen gun export regulations. OMG. What kind of world do you want??
Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Hello,

If you're being mugged and you have a gun, would you hand it over to them? President Trump's proposal to lift the current regulations exports seems to be doing the same thing. I believe the the inherently military nature of these firearms means that the sale of them is an issue of national security. I feel very strongly that the gun export laws should stay as they are. Why would we make it easier for potential terrorists or international criminals to obtain lethal weapons?

Thank you for your time.

The proposed changes in the rule regarding international arms regulations are RECKLESS. Lives around the world will be endangered by international and domestic criminals. It boggles the mind that an American administration can be so blind to the effect of these changes on the freedom of the traveling public to go anywhere without fear of gun violence; on the freedom of Americans to go about their business in their own country; and on the general safety of the world at large.

Please do not change these rules so drastically. They've been in place since 1940; they still work. You are hurting us, your constituents, whom you promised and swore an oath to protect against all enemies, foreign and domestic. These rule changes violate that oath on every ground.

I oppose this proposed rule for the following reasons, and for my belief that will make our world even for violent. Congress is shirking their responsibility in protecting the American people.

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I strongly oppose this proposal to transfer the oversight of weapons export from the State Dept. to the Commerce Dept. The change is only for the benefit of the gun manufacturers to increase their profits and to weaken law enforcement over firearms trafficking to shady gun dealers. The security of civilian citizens here and abroad would be at risk for the following reasons.

The proposed change treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I adamantly oppose the proposed rule change because of its negative impact on both the domestic and international fronts.

The proposed rule would dramatically change the regulatory structure for firearm exports--in a way that makes it appears to be largely driven by the interests of industry.

It's complexity raises the concern that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. In addition, I am concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Specifically, these the rule changes that would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

No, dont loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule appears to be largely driven by the interests of industry.

The proposed rule does not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. Also, the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Dont eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

Dont remove licensing requirements for brokers, increasing the risk of trafficking.

Dont remove the State Departments block on the 3D printing of firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I am a North Carolina pediatrician. I am opposed to this proposed rule: International Traffic in Arms Regulations.

In a time of great national concerns about keeping our country secure, this proposed rule MAKES NO SENSE.

Specifically, it will eliminate the State Dept BLUE LANTERN program which carries out hundreds of post shipment and pre license inspections and reports these actions to the public.

Please listen to the citizens of the USA like myself and don't put us in jeopardy with this proposed rule.

Thank you.

General Comment

I oppose the passing of this rule that would loosen regulations on weapon exports because it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. This rule should not pass.

General Comment

I am commenting on the new rule proposed by the Trump Administration that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. I am concerned that the proposed rule will not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

This is pure greed on display. The gun industry serves the purpose to kill. International sentiment seeks to reduce weapons of mass destruction even as the United States attempts to mass distribute guns. The quantities of guns being distributed for profit will eventually rival the same mass destruction as large weapons. This must be stopped.

General Comment

I am a citizen of the USA and resident of the state of Michigan.

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

More reasons exist to stop these unwise changes.

General Comment

The Trump administration has proposed changes to the agreements affecting the sale of weapons abroad that I believe would make the world a more dangerous place. Please don't value commercial gain as more important than keeping all of us safe.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not dismantle important protections that have served us well and that we still need.

General Comment

To Whom It May Concern:

It would ask that you preserve the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. Eliminating these licensing requirements for brokers will increase the risk of illegal firearm trafficking.

Please also preserve the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The government's first job is to protect the people. Opening the door to the spreading of unlicensed firearms to whomever, wherever is inconsistent with the spirit of firearms laws and your obligation to protect the safety of the American people.

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

My name is Monica Ortiz and I am a registered voter in Wellington, Florida. My only concern is to save lives. One life is worth more than all the guns in the world. We need to have common sense gun laws on the books. Not laws that make it easier for guns to get into the hands of someone who means to do harm to others. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. This proposed rule must not be put in place!

General Comment

I am very OPPOSED to the proposed regulation to move the firearms exports from the State Department of Commerce.

The State Departments oversight and regulatory authority is critical to our countrys safety by monitoring weapons domestically and those coming into this country. Since most types of firearms can be used for military and terrorist activities and they should remain under the scrutiny of the Department of State for our protection rather than Department of Commerce for promoting export of our goods with little oversight.

If the regulatory rule is changed, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

Additionally, the Commerce Department just does not have the resources to adequately enforce export controls which means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The end result is firearms will be exported to anyone with money.

For the safety of the people of our country and the world, PLEASE DO NOT approve this move.

General Comment

We know that gun violence spreads like a virus, from one person/family to another and across communities and states. Simply being close to a gun increases the chances that you will be harmed, domestic violence, suicide or accidentally. Gun violence is an epidemic in America, spreading like a wildfire in California. Please don't export this violence to other countries which would make gun violence a pandemic, like the deadly flu in 1918. It was not a disease that could be controlled. This violence will circle back through America ten-fold and may revisit it's deadly effect on you or your family.

As a physician, I stabilize patients using the ABCs first, Airway, Breathing, Circulation, the most necessary functions to keep one's body alive. Sometimes that means we don't treat the cause of their emergency first. We stabilize the airway so they can get air in, we ensure they can oxygenate effectively and then we make sure their heart is working and their blood pressure is adequate to perfuse the brain. Once we know those major organs are taken care of, we can begin to search for a cause. First, we have to buy ourselves time to work. We can continue to talk about the causes of gun violence but first we have to stop the gun deaths and stabilize the situation to give ourselves time to come up with reasonable plans. For now, stop spreading the gun violence by making more guns, transporting more guns and making it easier to get guns, even temporarily.

Ideally, if at least temporarily, HALT gun sales. There are more than enough guns on the market for people to sell to each other. Let's discuss this without all the rhetoric, without the NRA. Let's look at the science. Don't spread this epidemic. ABCs, stop the bleeding.

It is appalling to hear that our gov't wants to make selling weapons easier which will help the terrorists even more. It's a well known fact our gov't has created or emboldened terrorist organizations due to lack of foresight and/or corruption.

It is ludicrous to ease sale of weapons which will empower and strengthen terrorist organizations. Trump's plan is a terrible plan and must not proceed.

Im Nick Britten and Im for increased gun safety around the world. For that reason Im against this proposal. More specifically Im against this proposal because it does the following things:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

There should be no relaxation of laws and regulations around exporting or traveling with firearms. The United States has one of the worst rates of gun violence in the world and we should not allow that to flow over into other countries. Eased exports will only support terrorist organizations. Do not enable gun manufacturers to spread their business through terrorism.

There are two major problems with this rule change moving the handling of export licenses of semiautomatic assault and other firearms from the U.S. State Department to the U.S. Commerce Department. First, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security. Second, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere.

This rule change would, therefore, make it much easier for firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous groups and organizations to obtain large caches of American guns and ammo with which to commit their horrendous crimes.

This rule change should not take place in the best interests of both American security and moral conscience.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted on line instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain

rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies

General Comment

I have the following concerns about the rule change. Specifically, it

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

None of these changes is beneficial to the broader public, in the US and abroad.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

First, we should not be exporting anything to any country where it is currently against the law to own or possess such an item. This action would undermine that country's right to their own sovereign rule. Second, we have become the leading nation in the world in gun deaths, and we do not want to export that disease to any other country in the world. Third, exporting these items will create enemies and the US at this point needs friends, not new enemies.

General Comment

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

Good afternoon,

My name is Andres R. Quiroga, current resident of New York. Im writing to oppose this amendment based on the overwhelming amount of evidence we have on the horrific results American weapon exports have had around the world.

If moral grounds are not enough, please remember that we have directly armed terrorist organizations in the past, which resulted in loss of life of allies and American soldiers.

I know there are other plenty factually supported reasons not to, but human life has no cost, and those 2 should suffice.

Thank you

As a human rights advocate for the last decade and a half, I am writing to express my concern about, and voice my opposition to, the reclassification of semi-automatic weapons as commercial items.

Due to my extensive work on gross human rights abuses in sub-Saharan Africa, I understand the role the semi-automatic weapons play in increasing fatalities in areas of Africa affected by conflict.

For example, in the Democratic Republic of Congo, the large-scale presence of automatic and semi-automatic weapons increases the toll on civilians at the hands of armed actors inside and outside of government. According to the 2012 Amnesty International Report, "If You Resist, We Will Shoot You!" (available online at http://www.amnesty.eu/content/assets/ATT_DRC_report.pdf), members of the Congolese Republican Guard used AK-47 rifles to disperse a crowd of pro-democracy demonstrators in the capital city of Kinshasa in late 2011.

The use of semi-automatic weapons like the AK-47 in the dispersal of protesters led to the death of 12 opposition activists as a result of this excessive force.

As such, I strenuously oppose the any federal steps to make these weapons easier to export across national borders.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. Please note that I am a supporter of the Second Amendment and consider myself a rational moderate on the issue of guns. That being said, the proposed rule change eliminates necessary Congressional oversight for gun export, which stops an important check. I fear that we are placing the desires of the gun industry over the responsibilities of our Congressional leaders. I fear guns will proliferate and fall into the wrong hands. Mostly, I am disturbed that this action feels like it is taking place in secret, like so many changes lately, which seem to me to diminish the transparency and authority of the people to make wise, reasoned policy through their elected representatives. Please do not make this change.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake

General Comment

Please block the administration's proposed rule that would loosen laws on exporting military grade weapons which could then end up in the hands of criminals & terrorists. The rule would also allow 3D printing of dangerous weapons that may not be tracked by officials. This rule is deadly & weapons could then be used against US citizens. Act now to block it.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are by design highly portable danger. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Their lethality should be subject to more controls, not fewer.

Thank you for helping to secure our country and world as a safer place.

General Comment

I oppose the proposed rule and urge you to abandon the proposal that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns,

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers and the gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

General Comment

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

Submitter Information

Name: Alicia McClintock

General Comment

My name is Alicia McClintock and

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that

firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. I hope this is taken seriously and not politicized.

General Comment

As a gun-owning taxpayer, I am very concerned about this proposed change in policy. I'm especially concerned that this change eliminates Congressional oversight for important gun export deals. It reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and eliminates registration of firearms exporters, a requirement since the 1940s.

The Commerce Department does not have the resources to enforce export controls, even now. It reduces transparency and reporting on gun exports. It transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade. This does not seem to be in humanity's or our country's best interests.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Please leave the regulation of firearm exports with the US State Department.

General Comment

I vehemently oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. International firearms sales must remain classified as "military" and therefore under regulation by the State Department, so that Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, or to countries where there are serious human rights concerns.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. This would create an unacceptable proliferation of firearms in the hands of dangerous groups. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Further, the rule change would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Given the issues with gun violence and the trump Administration's attitude against immigration, this rule change would make two extremely bad situations much worse.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is too complex and driven by the interests of industry.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Here are details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Department's block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I believe that it's a mistake to change the sale of firearms to the Department of Commerce. This rule change will only come back to haunt us in a very horrible way. Just as increased firearms sales in this country haunt us. Please do not do this.

Ioppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This is an insane idea that Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

General Comment

My 19 year old daughter was killed in a rampage shooting in 2001, so I know full well the tragic toll of gun violence. I also know that Americas gun homicide rate is more than 25 times the average of other high-income countries.

An analysis of gun homicide rates in developed countries those considered high-income by the World Bank found that the United States accounted for 46 percent of the population but 82 percent of the gun deaths.

The current proposal by the Trump administration would it easier to export U.S. guns and ammunition globally. I strongly object to America arming the world, especially with assault weapons and other powerful firearms. The proposal would move export licenses from the State Department to the Commerce Department. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually.

I object to the proliferation of weapons used in war and crime in other countries. Specifically, I oppose the proposal for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

2. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue

Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

3. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

4. This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

5. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Thank you for considering my objections and concerns. I ask that this proposal be rejected.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

Corporate profits from the sale of guns should never take priority over sensible gun laws and protection for the world's citizens. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! I strongly oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Do not eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. Do not remove licensing requirements for brokers, which increase the risk of trafficking. And do not remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Stand up for the safety of American citizens and citizens of the world. Do not switch the regulations of firearms export from the US State Department to the US Commerce Department. Thank you.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

Thank you for the opportunity to comment on the Proposed Rule: International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III.

I am a citizen and taxpayer extremely concerned about gun violence and national security, and feel strongly that the handling of export licenses of semiautomatic assault weapons and other powerful firearms should remain with the U.S. State Department rather than move to the U.S. Commerce Department, for the following reasons:

This rule would transfer gun export licensing to an agency whose principle mission is to promote trade. Both assault weapons and non-semi-automatic weapons are used in large numbers by criminals around the world. Their export should continue to be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The proposed rule would transfer the cost of processing licenses from gun manufacturers to us, the taxpayers. Registration fees that are used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So, we the taxpayers will absorb the cost of reviewing applications and processing licenses when it should remain a cost that gun exporters pay.

The rule reduces end-use controls for gun exports in several ways. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would eliminate registration of firearms exporters, which allows the State Department to check on an exporters history. Without use of this database, enforcement against arms trafficking will be seriously weakened. The Commerce Department does not compile information on human rights violations, so this rule would make it harder to deny weapons licenses to international human rights violators

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. Furthermore, Congressional oversight for important gun export deals would be eliminated. Congress will no longer be automatically informed about sizable sales of these weapons. This would violate Congressional intent and effectively eliminate Congress proper role.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

What is perhaps scariest is that the proposed rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Please do not make it easier to export U.S. guns and ammunition globally by moving export licenses of semiautomatic assault weapons and other powerful firearms, given that U.S.-exported firearms are already used in countless crimes, attacks and human rights violations in many nations. This seems to be a rule that would only benefit gun manufacturers, and that is just plain wrong.

I want all guns to be regulated just like cars. All have to take a mental stability test and use of firearm tests. All need to be insured and close all the loop holes at gun shows. No one should sell a gun with out a paper trail. The data base will be paid for by gun owners through their fees and this data base is live, all law enforcement and courts should see complete history from every state. No more guns in public places or schools. End open carry, no one needs to take a gun to the movies or to concerts.

General Comment

I think this is a terrible idea.

The proposed rule would consider semi-auto assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Civilian trade does not need need assault rifles of any sort.

This rule removes Congressional oversight for important gun export deals, reduces transparency and reporting on gun exports (which increases the risk of trafficking along with the removal of of statutory license requirements), shifts the cost of processing licenses from gun manufacturers to taxpayers, gets rid of or decreases many existing gun control efforts, encourages 3D printing of firearms, and transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

It seems practically designed to make gun trafficking more likely, harder to control, and more of a problem than it already is without expanding the resources for any agency to combat all these clear downsides.

Here are my concerns about the change to these policies:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

Treating semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries is unconscionable.

Do NOT:

- eliminate Congressional oversight for important gun export deals;
- transfer the cost of processing licenses from gun manufacturers to taxpayers;
- remove statutory license requirements for brokers, increasing risk of trafficking;
- reduce or eliminate end-use controls, such as State Depts Blue Lantern program, nor eliminate the registration of firearms exporters -- a requirement since the 1940s;
- enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms

As you know, the U.S. Commerce Department does not have the resources to enforce export controls, even now, so do NOT reduce transparency and reporting on gun exports. DO NOT transfer gun export licensing from an agency with mission to promote stability, conflict reduction and human rights, to an agency with mission to promote trade, for God's sake!

General Comment

Maintain control of International Traffic in Arms Regulations with the State Department where it resides currently.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

This change would make the world a far more dangerous place for these reasons:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[

General Comment

Easing restrictions on the export of firearms -- including types already banned in several U.S. states -- does a disservice to the U.S. and the world. The United States is already the #1 exporter of small arms and light weapons, many of which end up in the hands of drug cartels and militias from Bogot to Jakarta. These transfers are documented in detail by wide-ranging research, including the Small Arms Survey and the U.N. Office for Disarmament Affairs. We will only be shooting ourselves in the foot (pun intended) if we choose to give gun manufacturers more freedom to contribute to instability abroad. We will also be repeating the same travesty our government has condoned for decades: putting firearm industry profits over human lives.

I urge the Department to reconsider this and any other relaxation of existing restrictions on small arms exports.

General Comment

I am submitting this comment in support of DOS-2017-0046 to remove many items from the USML and transfer them to regulation under Export Administration Regulations. It makes sense for American industry and it makes sense to allow the Dept of State to concentrate on regulating arms that are truly military in origin and impact.

Removing gunsmiths from the purview of ITAR is a good change.

Moreover, it will remove the State Department from the regulation of ideas such as the 3D printing instructions of Defense Distributed. That horse has left the barn years ago and further regulation will never get it back.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

After reviewing the proposed regulations under the Federal Register for the revision of Category 1, we have noticed some irregularities in the overall objective of the transition.

Industry has been told that the shift from USML to CCL would be beneficial for the following reasons.

1. No export fees
2. Less Documentation For Exports of Commercial Type products

The issues, which are not clearly addressed in the Federal Register, are listed below.

In the proposal on Page 24198, titled Revision of Category 1, the FR indicates that items, which are inherently military will continue to be controlled under the USML. One could argue that inherently military can be applicable to any modern firearm depending on the End Use of the defense article. An End User in country X for example can use a commercial product for military applications regardless of original design and manufacture of the product. What will be the determination for the split between USML and CCL for an inherently military firearm?

Secondly, is Category I(G). I(G) will continue to cover many parts for commercial firearms such as Bolt Carriers, Slides, and Sear, which can be interchangeably used by commercial and military firearms. If a commercial customer wants to order a semi-automatic rifle and parts, such as replacement bolt carrier group or a upper receiver, barrel etc., then the applicant has to file an application with Commerce and State Department. This is a huge cost on industry and major cost to Commerce and the State Department. Right now the applicant could just file one application with State Department. The proposal would force applicants to get two different sets of documentation from the Consignee and then submit two applications. The cost associated to submit an application has now doubled since manpower is required to submit two licenses, and the cost to the US Government has increased since two applications now need to be reviewed by two different organizations. What about firearms such as Glock, Sig Sauer or Beretta etc.? Who will cover the parts since the United States military has used these products in the past? Will third party aftermarket accessories be considered as inherently Military parts and require a

State Department license?

DDTC has certain threshold guidelines for case processing times. What is the current, and projected processing times for Commerce to process applications? It is not uncommon for Commerce to staff out cases back to State Department for Referral further adding to the total time for processing. There is little to benefit industry if the average processing time for a case takes longer than current DDTC performance.

In addition, presently DDTC will RWA a case with explanation if there are certain factors contained within the case that may jeopardize national security interests. This allows industry to take corrective measures. What will be the RWA measure with Commerce? One major benefit of having a case RWA with explanation is the case officer has acted as a subject matter expert to accurately decide if a defense article contains features that will not be allowed for export to a certain country or individual. This safety net limits the liability of the applicant. When a case officer can act as a secondary set of eyes, it always is in the benefit of the applicant.

In the proposal on page 24200 under Regulatory Analysis and Notices there is little to indicate if Commerce will implement fees at a later date for applications of export. Although there will be a cost savings to the State Department what will be the cost implications to Commerce? How will Commerce accommodate the influx of applications without charging a fee to hire new personnel? Specifically, on page 24201 the Department of Commerce indicates it is unable to estimate the increase in costs. How will this impact case applications and timelines?

Perhaps, State Department could adopt a sliding fee structure for organizations that do not export or export very little. Under the proposal most manufacturers will still have to register with State Department.

In summation, as the proposal stands, there is blurred lines between inherently military items, many applicants will need to file two export licenses for parts and firearms with Commerce and State, increase in processing times, liability, and potential fees later on. We support changes in making the process more efficient, more effective and giving US Companies more advantageous positions to be competitive internationally. Many companies will benefit but many companies will also be significantly disadvantaged by the proposed changes.

I am seriously concerned that any transfer of authority from the Department of State to the Commerce Department regarding the sale and shipping of any kind of firearms will bring a world of trouble to our country and to the rest of the world as well. The State Department has the resources and oversight to keep lethal weapons out of the hands of terrorists where the Commerce Department is all about supporting U S business without a keen focus on where the guns will go and what will they be used for. Our world is already awash in guns of all types and we don't need less oversight - we need much more. I would demand that the State Dept. should be given further powers to monitor overseas firearm sales. Commerce should be concerned with non lethal products and commodities and supporting our businesses who trade in products other than firearms.
NO to the transfer of authority from State to Commerce regarding fire arms sales.

My friend and fellow citizen said it best:

"Easing restrictions on the export of firearms -- including types already banned in several U.S. states -- does a disservice to the U.S. and the world. The United States is already the #1 exporter of small arms and light weapons, many of which end up in the hands of drug cartels and militias from Bogot to Jakarta. These transfers are documented in detail by wide-ranging research, including the Small Arms Survey and the U.N. Office for Disarmament Affairs. We will only be shooting ourselves in the foot (pun intended) if we choose to give gun manufacturers more freedom to contribute to instability abroad. We will also be repeating the same travesty our government has condoned for decades: putting firearm industry profits over human lives.

I urge the Department to reconsider this and any other relaxation of existing restrictions on small arms exports."

General Comment

I do not support the changes to the rules for International Traffic in Arms Regulations.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Comments Re: Proposal for the United States to move oversight of export licenses for semi-automatic assault weapons, sniper rifles, and other powerful firearms from the State Department to the Commerce Department

I am a female senior citizen who, over a span of 76 years, has seen the sale and use of fire arms, especially assault-style weapons designed for military use, proliferate and the loss of life due to gun violence increase to a sickening and almost unimaginable level.

I vehemently oppose the proposal to move oversight of such weapons semi-automatic assault weapons, sniper rifles, and other powerful firearms not meant for use in hunting or other gun-related recreational sport, nor ever meant for self-defense from the State Department to the Commerce Department. Such weapons of war rightfully and logically belong under the purview of a military-oriented department. Further, removal of such weapons from the domain of the State Department is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. If this proposal is allowed to be enacted, Congress will no longer be automatically informed about sizable sales of these weapons, weakening controls on who ends up with such weapons even lifting restrictions on 3D printing of guns and inevitably leading to people making their own how powered weapons.

This proposal is really a sop to the gun industry and the NRA, aiding them in opening international markets and exporting U.S. guns and ammunition globally without regulation, and will likely lead to more U.S. guns ending up in the hands of criminal organizations, human rights abusers, and terrorist groups. It is a cynical move that wholly ignores the needs and rights of American citizens to live free of the fear of gun violence. It will take the country backward in the fight to reduce gun violence rather than move us forward in our efforts to promote and secure the safety of our citizens.

Further, the new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. The gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and

light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will also reduce transparency and reporting on gun exports. It would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

It is high time we stop kowtowing to the NRA and the gun lobby and start protecting our citizens rights to live free of fear of gun violence. I urge you in the strongest possible way to reject this proposal.

I am concerned about the proposed changes. While I want our Second Amendment rights protected, I am also concerned that dangerous weapons don't get into the hands of the wrong people, which threatens public safety.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I live in Oregon and have advocated for gun laws enforcing safety requirements for the sake of those who want to live in a peaceful society. I disagree and disapprove of the transfer of licensing fees from gun manufacturers and I disapprove of guns leaving this country capable of being weapons of war and going to other countries where they could harm civilians. We are a country which still struggles to treat women as equal to men, and whose violent crimes are largely committed by men, possibly due to a prevailing worldview where men are the center of that world view. And so it is illogical to me to hear people declare this country the greatest country in the world and then permit weapons of war to leave our country and go to other countries where the oppression of women or minority groups might be even worse or more unpredictable. We have a moral obligation to not let destructive weapons leave our control as a country because we have not yet reached equality nor perfection in social behavior or control, and even if we say we have no morals to account ourselves to we still have the inescapable desire to call ourselves the greatest nation on earth. And that would be a lie if we did not protect others from the very failings, or worse, we ourselves have. Transferring fees from businesses who make a tool of death is only putting in 'bronze' the pervasive man centered world view as if it is here to stay and will never be lifted up from up off of the people. If the companies want to make a tool of death let them pay the associated costs. They should not be allowed to use other people to bear their responsibilities.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

This rule change transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Subject: Do not switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department -- International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III (Docket ID: DOS-2017-0046-0001)

To: Secretary of State Mike Pompeo, Secretary of Commerce Wilbur Ross, Under Secretary of Commerce for Industry and Security Eric L. Hirschhorn, and Assistant Secretary for Export Administration Richard E. Ashooh,

I strongly oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

As you are aware, firearms exports are currently classified as "military and are under the jurisdiction of the State Department. Congress can also block sales of large batches of firearms to foreign countries. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines, Saudi Arabia, and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have sufficient staff, let alone staff in every nation around the world. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The rule change would also make the world a far more dangerous place because:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.

3) It would remove the State Departments block on the 3-D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3-D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3-D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3-D printing of firearms in the U.S. and around the globe.

I strongly urge you to reject this proposed rule change.

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,
Christopher Lish
San Rafael, CA

I am strongly against letting US gun manufacturers sell weapons abroad. Those guns will be purchased by criminal gangs and used against law enforcement and US soldiers. Selling US guns abroad is being promoted by Trump so the NRA and gun manufacturers will support Trump and give him money to support his campaign in 2020.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake. I would like our legacy, as the United States of America, to be that we made the world a safer place to live rather than create an increase in the level of violence in which the world is already dealing.

I oppose the rules change that would move the handling of export licenses of powerful firearms from the U.S. State Department to the U.S. Commerce Department. The Commerce Department does not have the experience and resources to adequately enforce export control. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I am against this because it:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I am writing to express my vehement opposition to moving export license oversight for firearms from the U.S. Department of State to the U.S. Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is clearly inconsistent with the undeniable reality that our troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries.

Our government should not be making it easier to trade/export weapons that are likely to be used in other countries by organized crime, terrorism, human rights violations, and political violence. It is inappropriate and shameful that the proposal would, in effect, use the Commerce Department to promote trade in such weapons to kill human beings abroad. Abroad, our country already has the reputation as being overrun with guns; so our solution is to make it easier to export these weapons? The current gun export licensing oversight under the State Department is appropriate as that agency's mission is promoting stability, conflict reduction, and human rights.

In addition to reducing transparency and reporting on gun exports, the proposed rule also would: eliminate Congressional oversight for important gun export deals; transfer the cost of processing licenses from gun manufacturers to taxpayers; and, enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Shameful.

Please consider the following negative aspects:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

1 It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2 It would remove licensing requirements for brokers, increasing the risk of trafficking.

3 It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please take all this into consideration before you would take the extremely dangerous step.

Thank you.

Enid Cardinal

General Comment

I am not in agreement with the proposed changes to the International Traffic in Arms Regulations. Intending to revise these three categories indicates a commercial pursuit not considering the deadly impact it could have on recipient countries. Widening this market with a more diverse selection will spur more international trade with international armies and polices infamously recognized for their human right repression.

I fear this will allow the United States Department of State to give clearance to gun shops across the South West to offer a wider selection for our governments and armies south of the border. I fear for that for the pursuit of commercial growth, unworthy and untrusting armed forces across the world will have access to this deregulating market.

The Federal Register of Munitions should be more mindful of who their customer base is, on an international level, and spend more time investigating the international trafficking of arms. It is no coincidence that Border Patrol Agent Brian Terry was killed with a gun supposedly monitored by the ATF's Fast and Furious Operation.

I understand the economic concerns some gun shop owners and employees and the industry as a whole may have, but the potential for US-manufactured, commercially-approved, gun-fueled violence in the world should not be overlooked due to the loss of some revenue.

As an entrepreneur and skilled maker who is capable of creating performance parts and custom sporting firearms for use in shooting competitions, I am unable to enter this market without significant financial backing. I cannot create a hammer, trigger sear, disconnector, any part. I cannot tune and improve handguns and sell them as signature upgraded firearms. Not unless I register with the DDTC, and stay registered with them annually at a great expense for a one-man show.

I support the elimination of the annual \$2,250 fee required by the Department of States Directorate of Defense Trade Control. I believe this imposed requirement was done to choke innovation and advancement in the firearms industry.

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Semiautomatic assault weapons and other powerful firearms are clearly military and as such must continue to be under the regulation of the State Department and to allow Congress the ability to block sales of large batches of firearms to foreign countries in the name of national security, and to countries where there are serious human rights concerns. The Commerce Department just does not have the resources to adequately enforce export controls; firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The rule change would remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe, which is a terrible idea. This rule change would make both the US and the world a far more dangerous place.

Thank you.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military and therefore are under the regulation of the State Department, and thus Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Come on -- it is obvious our national security implicated. The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world as this is how they make money. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I oppose this rule change. I believe the US State Department should continue to have control over foreign arms sales. This could otherwise become dangerous especially if weapons get into the wrong hands. Gun sales to foreign entities should remain as military sales that are carefully controlled by the US State Department. Otherwise, this could become a major security risk for our nation. The US Commerce Department is focused on promoting American business. This is not about American business. This is about American safety. The US State Department is focused on safeguarding our nation. It is the right entity to continue having control over foreign arms sales.

I am writing to oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. Firearms are a weapon of war and tight restrictions should be maintained on which foreign entities can have access to these.

The current rules automatically informing Congress about sizable weapons sales is critical to keep military-grade hardware from falling into the hands of regimes which pose serious human rights concerns towards their people, or those which would pass these weapons along to terrorist organizations.

The Commerce Department does not have the resources to adequately enforce export controls as its Bureau of Industry and Security does not have staff everywhere. This means we will be relying on the same industry self-regulation which has produced the disastrous US domestic firearms policy. In short, profit will be placed over national security.

While not perfect, the State Departments Blue Lantern program is a much better alternative to this giveaway to the gun industry.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

Please do not pass this in my name. When we the taxpayers are having to pay 4 decreased regulation of semi-automatic weapons and guns it is making me responsible for how they are used to kill each other and to kill us. We are already killing our own with weapons made and sold by our gun manufacturers. I ask you in the Department of State to become peacemakers not war makers.

General Comment

Dear Sir/Madam:

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Sincerely,
Debra Chisholm

I am a retired person concerned about the cost shift that will happen with these changes. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

General Comment

My name is Victoria Chance from Greenville, SC. I oppose this proposed rule. As a Franciscan and a citizen, we should not export semi-automatic weapons. These firearms should be dismantled and recycled. Congress needs to maintain oversight over ALL guns sales. Exporters should pay for licenses. We should never remove the block on printing 3-D firearms.

We are all responsible for the safety of one another. Passing this proposed rule would simply jeopardize the rest the world as we export our propensity for violence for the sake of money. Profit is not a justification for increasing the violence in the world. Our government should be exporting humanitarian aid, education, and our justice system NOT weapons.

General Comment

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. I am afraid of the use of assault rifles by non-military troops such as guerillas.

Eliminates Congressional oversight for important gun export deals. Congressional oversight is essential.

Transfers the cost of processing licenses from gun manufacturers to taxpayers. We taxpayers do not want to pay the cost of processing gun licenses.

Removes statutory license requirements for brokers, increasing risk of trafficking. This point suggests a complete lack of control over who will ultimately receive and use the weapons we transport. This is very dangerous.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade. This is a very good point. Guns are weapons of war and killing and should be used only as necessary in order to promote peace.

General Comment

I am a teacher within the Chicago Public Schools district. I am opposed to amending the International Traffic in Arms Regulations (ITAR) to revise Categories I (firearms, close assault weapons and combat shotguns), II (guns and armament) and III (ammunition and ordnance) of the U.S. Munitions List (USML) to describe more precisely the articles warranting export and temporary import control on the USML. Items removed from the USML would become subject to the Export Administration Regulations (EAR).

The firearms industry is hurting financially - revising these rules to benefit the fire arms industry's bottom line is NOT in the best interest of Americans or any global citizens.

We do not need more guns in the hands of those that wish to cause us harm. These high powered weapons belong in the hands of our military and not civilians.

Also, the amendments proposed would limit Congressional oversight on important gun export deals and drastically increases the possibility for gun trafficking. This is unacceptable.

I respectfully ask that the Department of State does not amend the International Traffic in Arms Regulations (ITAR).

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department vigorously oppose the rule changes that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Such trade must be factored into international interactions and diplomacy. It is not simply a matter of commerce. Further, the proposals to cease licensing would make arms too easily trafficked, especially without at least as much inspection as has been conducted with State Department oversight. And there should never be 3D reproduction of guns of any size of fire-power.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Furthermore, it would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

I oppose the proposed rule as explained in the attached.

Attachments

I oppose the proposed rule for the following reasons

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as “non-military.” But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. [2] <http://www.vpc.org/the-trump-administration-proposes-making-gun-exports-easier-heres-how-to-submit-your-public-comment-on-this-dangerous-proposal/?eType=EmailBlastContent&eId=2af87259-df55-4a4a-bd29-35ea1d658f42> Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress’ proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government - i.e., taxpayers - will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention. [3] <http://www.vpc.org/the-trump-administration-proposes-making-gun-exports-easier-heres-how-to-submit-your-public-comment-on-this-dangerous-proposal/?eType=EmailBlastContent&eId=2af87259-df55-4a4a-bd29-35ea1d658f42>
5. The rule reduces end-use controls for gun exports. It would eliminate the State Department’s Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S.

Government's information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter's history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

6. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.
7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] <<http://www.vpc.org/the-trump-administration-proposes-making-gun-exports-easier-heres-how-to-submit-your-public-comment-on-this-dangerous-proposal/?eType=EmailBlastContent&eld=2af87259-df55-4a4a-bd29-35ea1d658f42>> The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.
8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.
9. This rule would transfer gun export licensing to an agency - the Commerce Department - whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.
10. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5]

General Comment

I OPPOSE this rule change. The proposed rule would dramatically change the regulatory structure for firearm exports. Further, the proposed rule is being driven by the interests of the gun industry.

I am concerned that the proposed rule will not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

The rule change would make the world a far more dangerous place in the following ways:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Rather than moving forward with the proposed rule, the Administration should SCRAP this rule and consider other alternatives to better balance the important interests at stake.

This would be a terrible scourge on the world, with the only beneficiaries the Merchants of Death - I mean arms manufacturers. The United States cannot, must not allow this avenue that can flood the world with military-grade arms. If you have any conscience at all, please do not allow this to happen. The many lives that would be lost would be on your head. Please do the responsible thing and block this proposal!! Our communities our nation and our world will thank you for it

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

To whom it may concern:

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Switching the regulation of firearms exports to Commerce would facilitate firearms exports to oppressive regimes, remove safeguards that help keep organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and exacerbates the worldwide refugee crisis.

We should not be exporting more guns especially guns of the same type that our military uses and the licensing should not be transferred to an agency the Commerce Department that already cannot fulfill its responsibilities. Licensing needs to stay with the State Department which is more focused on the harm that these weapons do to our citizens abroad and citizens of other countries.

A 2nd reason I am strongly opposed to these proposed changes is that congressional oversight would effectively be eliminated. This is extremely important because without such oversight nobody would have been aware of the scope of recent human rights violations in the Philippines or in Turkey.

We as a country need to continue to stand up for the dignity of each person - a dignity that is far more important than a few people or companies making money off of an increase in violence and killing.

RE: RIN 0694-AF47 (Commerce) and RIN 1400-AE30 (State)

Dear Mr. Ross and Mr. Pompeo,

Catholic Health Initiatives appreciates the opportunity to comment on the proposed rules to address the Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML). Catholic Health Initiatives (CHI) is a faith-based nonprofit health system operating in 18 states with 100 hospitals and numerous other services and facilities that span the inpatient and outpatient continuum of care. As a Catholic organization, we feel a special call to reduce violence in our communities and around the world.

While these proposed rule touches many aspects of firearm regulation, sales and oversight, CHI is particularly concerned about the transfer of weapon sale regulation from the State Department to the Commerce Department and the negative effect this may have on violence around the world. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Catholic Health Initiatives

July 9, 2018

Rather, the rule proposes to transfer gun export licensing to the Commerce Department, whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The types of weapons being transferred to Commerce Department control—including the AR-15, AK-47, and other military-style assault rifles and their ammunition—are among the deadliest personal-use weapons produced in the United States. We also understand they are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

We should not export American violence solely to boost economic development, competitive advantage, or other commerce-related goals. We strongly urge the Departments of Commerce and State to rescind this proposed rule.

Thank you for consideration of our comments on this important issue. If you have any questions, please contact me at 303-298-9100 or contact Laura Krausa, Director of Advocacy, at laurakrausa@catholichealth.net.

Sincerely,

A handwritten signature in cursive script, appearing to read "Colleen Scanlon".

The US arms makers are a major source of small arms originally designed for and supplied to our military. Since 1970 or so they have hit the civilian market in vast numbers, and we are seeing the totally expected abuse with mass shootings in the US. Really, do we want more of the same with these same guns in the hands of foreign gangsters, despotic governments, terrorists, etc.,etc? The NRA's only concern is to sell as many guns as possible, not only here, but across the world. Isn't there anyone in our government. who has the courage to push back on this insanity? Please do. General Comment

Americans Against Gun Violence opposes the transfer of oversight for regulation of firearms exports from the State Department to the Commerce Department, as proposed by the Trump Administration in the ITAR amendment, categories I, II, and III. The new proposed changes would have numerous adverse effects, including, but not limited to, the following:

Reclassifies semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime,

political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

The ITAR amendments proposed by the Trump Administration are clearly an effort to boost lagging domestic gun sales without regard to the safety of civilians in other countries. The epidemic of gun violence in the United States is a national disgrace. We should not be in the business of exporting this epidemic abroad.

Yours truly,

Bill Durston, MD

President, Americans Against Gun Violence

I am a registered Republican from Kansas and I always vote. I stand with the students from Parkland and want to limit gun violence with common sense laws and regulations. Let's not follow the bad practices of Ollie North (the criminal) head of NRA.

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military.

The proposed rule would eliminate Congressional oversight for important gun export deals.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons.

The rule reduces end-use controls for gun exports.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.

The proposed change will reduce transparency and reporting on gun exports.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

Organization: Amnesty International USA

General Comment

For thirty-five years I have been a member of Amnesty International USA and currently chair our Women's Human Rights Coordination Group. Amnesty International is the world's largest grassroots human rights organization, and our global movement consists of millions of members and activists who defend justice, dignity and freedom for everyone without exception. The Women's Human Rights Coordination Group's particular area of interest is in the human rights of women and girls.

We are concerned about recent proposals to move responsibility for oversight of licensing of international sales of some small arms and light weapons from the Department of State to the Department of Commerce and the removal from the US Munitions List (USML) of several semi-automatic firearms, including AR-15s, some AK-47s and high capacity ammunition cartridges. Since 2014, the U.S. has been one of the worlds largest arms dealers, and is responsible for approximately 30 percent of conventional arms transfers with regards to monetary value. Consequently, these changes would make sales of these weapons easier and expand access to them at their destination. They would also reduce accountability for their use in commission of human rights abuses.

It is now recognized that rape and sexual assault are systematically used as weapons of war in conflicts around the world. Attacks on women and girls terrorize families, communities or ethnic groups, humiliating and demoralizing local residents to bring them under control, or causing them to flee from disputed territory

In interviews with women and girls who have survived sexual violence during conflict, a very high number of their stories include descriptions of the torture they endured at the point of a gun. Although the particular models of firearms involved are seldom identified, there is no doubt that a military-style weapon contributed to gross violations of their human rights. Even after a conflict has officially ended, the weapons left behind are used all too often by perpetrators of domestic violence. Colombia receives a large proportion of their weapons from the U.S. These guns are often linked to the patriarchal culture that supports the notion that firearms help men to defend themselves and protect their families. However, these weapons exacerbate violence against women and girls. In Colombia, 2 out of 10 women who are

internally displaced identify sexual violence as the primary cause. The exact model of firearm used in violence against women and girls is irrelevant, and all military-style weapons and ammunition currently on the US Munitions List should remain there.

Amnesty International was actively involved for two decades in negotiating the global Arms Trade Treaty (ATT), which went into force in December 2014. This treaty requires that before authorizing a transnational sale of firearms, governments must assess the risk that the weapons under consideration would be used to commit or facilitate serious violations of international humanitarian or human rights law, undermine peace and security, or to engage in transnational organized crime. An "overriding" risk that the arms would be used for these purposes would prohibit the sale.

After intense lobbying by women's human rights organizations and activists during the drafting of the ATT, it became the first treaty that recognized the link between the international arms trade and gender-based violence. Article 7(4) of the treaty made it mandatory for arms exporting countries to assess the risk that weapons being considered for sale would be used to commit or facilitate gender-based violence and deny authorization in the case of an "overriding" risk.

Moving responsibility for authorizing international sales of additional weapons and ammunition from the Department of State to the Department of Commerce would bypass the requirement to assess the risk that the merchandise in question would be used to commit or facilitate human rights violations, including gender-based violence. It is essential that these standards continue to be upheld, and we strongly urge the Government to maintain responsibility for international sales of weapons and ammunition manufactured in the US with the Department of State.

Sincerely,

Alice Dahle, Chair
Women's Human Rights Coordination Group
Amnesty International USA

I am writing to express my opposition to the proposed rule regarding the regulation of international arms traffic. The rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I oppose the regulation of firearms exports by the Department of Commerce rather than the Department of State. The former department is already overburdened while State has the resources to continue this job. America must not become the gun dealer to the world and make worse the proliferation of weapons, especially weapons that will find their way back to our streets.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I'm an expert on civilian harm and the arms trade, and I write to urge you to reject this dangerous proposal because:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, and US troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate arms exports.
2. The proposed rule would eliminate Congressional oversight for gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons, which will limit its ability to comment on related human rights concerns. Items moved to Commerce control would no longer be subject to the statutory required congressional notification for sales of firearms regulated by the US Munitions List valued at \$1 million or more. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing, leaving the government i.e. taxpayers to absorb the cost of reviewing applications and processing licenses.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for

brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

5. The rule reduces end-use controls for gun exports. It would eliminate the States Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. End-use controls also are weakened by eliminating registration of firearms exporters. Registration of exporters allows State to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. Transferring licensing to Commerce will remove new exporters and brokers of these firearms from State's database, weakening enforcement.

6. The rule enables unchecked gun production in the US and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the US and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, State has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance the Commerce does not.

8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

9. This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by State, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The export of these weapons should be subject to more controls, not less.

General Comment

I oppose the the Trump administration proposal to move the make it easier to export U.S. guns and ammunition globally. By transferring the authority from the State Department to the Commerce Department, the number of exports applicant will increase by 10,000 annually. This includes assault weapons and other powerful firearms! This change in policy is problematic because it:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I am opposed to the transfer of oversight of firearms exports from the State Department to the Commerce Department. Firearms are weapons of war. The State Department is tasked with relations with other countries and the reduction of violent conflict in the world. On the other hand the Commerce Department would be responsible for increasing the sale of such weapons in support of US arms manufacturers. The Commerce Department has no responsibility to determine the effect of a particular arms sale on the stability of a country or region.

The State Department is in a position to know the political ramifications of shipping weapons of war to any particular country or region, and therefore should be in charge regulating the sale of such weapons of war. The sale of such weapons should remain under control of the United States Munitions List (USML) .

Right now, firearms exports are classified as military. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. The Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose this, or any other, rule change that would move the regulations of firearms export from the State Department to any other agency. That change would encourage firearms sales to entities that we all agree should not have them, such as oppressive political regimes, criminals and terrorists in other countries. The resulting increase in violence would not only destabilize those countries, but encourage mass migration to the United States, both undesirable outcomes.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for

brokers of these weapons to register and obtain a license, increasing the risk of trafficking. [3]

The rule would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4]. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The export of these weapons should be subject to more controls, not less.

I come from many generations of responsible rural gun owners. There are times and places where gun ownership and use are critical; however, I find the proposal to ease restrictions on the exportation of guns and ammunition from the United States to be abhorrent. We struggle enough with gun violence in our own country, that the gun industry and the NRA are pushing to embed that struggle in other communities just to increase sales and profits is poisonous and amounts to nothing more than greed run amuck. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to MORE controls, not fewer.

I work for a company that makes military life support equipment (helmets, masks). These items are protected under ITAR / EAR regulations - so that they don't fall into the wrong hands. How can we consider GUNS (any!) to be non-military items and not controlled by ITAR? The proposed rules would eliminate Congressional oversight for important gun export deals - Congress would not longer be automatically informed about sizable sales of these weapons. On top of that, the new rules would make taxpayers pay for "licenses" via the Commerce Department- not the manufacturers via the State Department. And depending on the size of the sale- this is a lot of money. In summary: the proposed change will reduce transparency and reporting on gun exports - Congress and the public will not be aware of the total dollar value of firearms sales and where they are delivered.

General Comment

I oppose a rule change that would switch the regulations of firearms export from the State Department to the Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

Hello, I am writing to express my concern for this proposal. It is inappropriate to make it easier for US guns and assault rifles even easier for other countries to get, especially since many of our guns are already used by "bad guys" across the globe. This treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries which is not ok. This eliminates Congressional oversight for important gun export deals which makes it easier to hide where the guns are going. This transfers the cost of processing licenses from gun manufacturers to taxpayers. This removes statutory license requirements for brokers, increasing risk of trafficking. This proposal reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Additionally this proposal is a bad idea because:

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Please do not allow this policy to go into effect.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I oppose this rule change that would switch the handling of firearms regulations from U.S. State Dept to U.S. Commerce Dept. I oppose the U.S. making money around the world while creating unrest and killings when there are already too many . More guns means more killing. Enough is enough!

Comment on Proposed Rules on Categories i-ii-iii by Depts. of State and Commerce
John Lindsay-Poland, Global Exchange

The below comment on the proposed rules by the Departments of State and Commerce supplements the comments submitted by the American Bar Association/Security Assistance Monitor and by Amnesty International USA, which we support. Please see the attached version for complete comment, sources, and notes.

The State Department proposed rule states that those weapons that would stay on the USML are inherently for military end use, adding that the items to be removed from the USML do not meet this standard, including many items which are widely available in retail outlets in the United States and abroad. One State Department official reportedly said: We kind of refer to it as the Walmart rule. If its like something you can buy at a Walmart, why should we have control?

The Commerce Departments description of criteria for items to be moved off of the USML concludes: Thus, the scope of the items described in this proposed rule is essentially commercial items widely available in retail outlets and less sensitive military items. (p. 4) It adds that: There is a significant worldwide market for firearms in connection with civil and recreational activities such as hunting, marksmanship, competitive shooting, and other non-military activities. However, the examples given here are not from prospective importing nations, but from the United States: Because of the popularity of shooting sports in the United States, for example, many large chain retailers carry a wide inventory of the firearms described in the new ECCNs for sale to the general public. Firearms available through U.S. retail outlets include rim fire rifles, pistols, modern sporting rifles, shotguns, and large caliber bolt action rifles, as well as their parts, components, accessories and attachments.

Retail availability in the U.S. should not be a criterion, since this is not the market to which exports treated by the proposed rule will be directed. Moreover, the U.S. retail firearms market is qualitatively and quantitatively different from nearly every market in the world: with 4.4% of the worlds population, the U.S. comprises more than 45% of the worlds firearms in civilian possession.

In addition, the statement neglects another significant portion of the worldwide market for firearms: criminal organizations, illegal armed groups, and armed security forces that commit human rights violations.

In many countries, retail availability of all firearms is substantially limited. In Mexico, for example, there is only one retail outlet in the entire country for the legal purchase of any kind of firearm. In the vast majority countries, there is a presumption against civilians owning firearms unless certain conditions and requirements are met. (S. Parker, Small Arms Survey, 2011)

Many nations either do not permit or highly restrict civilian use of some or all types of semi-automatic firearms and high-capacity magazines proposed for removal from the USML, and so cannot be said to have any retail availability of these prohibited firearms. Within the United States, semi-automatic rifles and high-capacity magazines are prohibited for retail sale in six states and the District of Columbia. Certain types of handguns and certain calibers of firearms that are included in Category I are also prohibited and not available for retail purchase in some countries.

That purchase and possession of certain types firearms and ammunition are permitted under national legislation does not necessarily indicate that these items are either widely available or feasible for most people to obtain. Many countries deeply restrict retail availability of all firearms through licensing requirements, which are often extensive and time-consuming.

States impose limitations on the retail availability, types of firearms that may be legally purchased, and licensing process for parties seeking to purchase a firearm because they recognize that guns are not like ordinary commercial items that can be purchased at a store. In many countries, legal markets for firearms blend with illegal markets in vast grey areas of stolen and diverted weapons. The potential and actual negative consequences of the ill use of such firearms are devastating. A coherent, ethical, and politically strategic approach to firearm exports would increase controls to help reduce violent harm by both state and non-state actors that will more easily acquire them under the proposed rules.

The proposed rules do not articulate any requirement for a review by State Department experts on human rights and criminal organizations. If that is the proposers intent, the rule should state it clearly, and spell out the scope of license applications subject to such review, concurrences required, specifying from which bureaus and agencies, and the competencies of experts who shall conduct reviews.

Comment on Proposed Rules on Categories i-ii-iii by Depts. of State and Commerce

John Lindsay-Poland, Global Exchange

The below comment on the proposed rules by the Departments of State and Commerce supplements the comments submitted by the American Bar Association/Security Assistance Monitor and by Amnesty International USA, which we support. This comment focuses on the proposed criterion of wide retail availability for firearms and munitions proposed for transfer from the USML to the Commerce Department, and includes brief comments about inter-agency review and about risks of criminal use.

The State Department proposed rule states that those weapons that would stay on the USML “are inherently for military end use,” adding that the items to be removed from the USML “do not meet this standard, including many items which are widely available in retail outlets in the United States and abroad.” (p. 5) One State Department official was quoted in a press report about the proposed rule: “We kind of refer to it as the Walmart rule. If it’s like something you can buy at a Walmart, why should we have control?”¹

The Commerce Department’s description of criteria for items to be moved off of the USML concludes: “Thus, the scope of the items described in this proposed rule is essentially commercial items widely available in retail outlets and less sensitive military items.” (p. 4) It adds that: “There is a significant worldwide market for firearms in connection with civil and recreational activities such as hunting, marksmanship, competitive shooting, and other non-military activities.” (pp. 6-7) However, the examples given here are not from prospective importing nations, but from the United States:

“Because of the popularity of shooting sports in the United States, for example, many large chain retailers carry a wide inventory of the firearms described in the new ECCNs for sale to the general public. Firearms available through U.S. retail outlets include rim fire rifles, pistols, modern sporting rifles, shotguns, and large caliber bolt action rifles, as well as their ‘parts,’ ‘components,’ ‘accessories’ and ‘attachments.’” (p. 7)

The retail availability in the United States should not be a criterion, since this is not the market to which exports treated by the proposed rule will be directed. Moreover, the U.S. retail firearms market is qualitatively and quantitatively different from nearly every market in the world: the United States, with 4.4% of the world’s population,² comprises more than 45% of the world’s firearms in civilian possession.³

In addition, the statement neglects another significant portion of the “worldwide market for firearms”: criminal organizations, illegal armed groups, and armed security forces that commit human rights violations.

In many countries, the retail availability of all firearms is substantially limited. In Mexico, for example, there is only one retail outlet in the entire country for the legal purchase of any kind of firearm.⁴ In China, firearm purchases are banned for most people, and private gun ownership is almost unheard of.⁵ In the vast majority countries, according to one of the few studies of firearms regulations, “there is a presumption against civilians owning

firearms unless certain conditions and requirements are met.”⁶

Belize, Colombia, Israel, Japan, Kenya, Turkey, and United Kingdom do not permit any civilian use of some or all types of semi-automatic firearms proposed for removal from the USML, and so cannot be said to have any retail availability of these prohibited firearms.⁷ Other nations, including Australia, Canada, Croatia, India, Lithuania, New Zealand, South Africa, Switzerland apply special restrictions to civilian possession of semi-automatic firearms, such as proof that they are needed for self-defense, and so it cannot be said that these firearms are “widely available in retail outlets” there. We emphasize that these examples are from only a selected sample of 28 countries; a full accounting of countries where there is only limited or any retail availability of semi-automatic firearms would certainly show many more.⁸ Brazil also prohibits “assault weapons” for civilian purchase, while Chile and Colombia prohibit civilian possession of semi-automatic weapons entirely.⁹

Moreover, within the United States, semi-automatic rifles and high-capacity magazines such as those proposed to be removed from the USML are prohibited for retail sale in six states and the District of Columbia.

Magazines with a capacity of more than 10 rounds are not permitted for civilians in Australia.¹⁰ Brazil, France, Romania, Slovenia, Spain, and Turkey do not permit purchase by ordinary civilians of high-capacity magazines.¹¹ DDTC policy has reportedly excluded export of high-capacity magazines except to military and law enforcement end users,¹² but nothing in the proposed rule indicates that the Department of Commerce would enact such a policy.

Certain types of handguns and certain calibers of firearms that are included in Category I are also prohibited and not available for retail purchase in some countries. In the Dominican Republic, for example, “certain firearms are considered ‘war weapons’ and can only be used by government forces, including .45 calibre pistols [and] rifles,” according a Small Arms Survey study,¹³ while Spain prohibits civilian purchase of firearms with a caliber of 20 mm or higher, which are considered to be “designed for war use.”¹⁴ More types – in some cases all types - of handguns are prohibited for civilian purchase in Belize, Canada, Colombia, Japan, Kazakhstan, the Russian Federation, the United Kingdom, and Venezuela.¹⁵

That purchase and possession of certain types firearms and ammunition are permitted under national legislation does not necessarily indicate that these items are either widely available or feasible for most people to obtain. In addition to prohibitions or restrictions on retail availability of types of firearms, many countries deeply restrict retail availability of all firearms through licensing requirements, which are often extensive and time-consuming. In India, for example, obtaining a license to acquire a firearm requires the applicant to demonstrate training in use of a gun, and often takes years.¹⁶ Japan requires gun buyers to go through 12 processes before purchasing any type of firearm.¹⁷

States impose limitations on the retail availability, types of firearms that may be legally

purchased, and licensing process for parties seeking to purchase a firearm because they recognize that guns are not like ordinary commercial items that can be purchased at a store. In many countries, legal markets for firearms blend with illegal markets in vast grey areas of stolen and diverted weapons, and of private security companies. The potential and actual negative consequences of the ill use of such firearms are devastating.¹⁸ A coherent, ethical, and politically strategic approach to firearm exports would increase controls to help reduce violent harm by both state and non-state actors that will more easily acquire them under the proposed rules.

Processes for gun exports reflect substantive priorities and as such are integral to policy. The National Sports Shooting Foundation (NSSF) claims that under the proposed rule, “Applications would go through the same interagency review process, including by the Defense Department and the State Department’s human rights and other experts.”¹⁹ However, the proposed rules do not articulate any requirement for such a review by State Department experts on human rights and criminal organizations. If that is the proposers’ intent, the rule should state it clearly, and spell out the scope of license applications subject to such review, concurrences required, specifying from which bureaus and agencies, and the competencies of experts who shall conduct reviews.

I am a U.S. taxpayer, resident, and citizen by birth. I oppose the transfer of oversight of firearms export from the State Department to the Commerce Department. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not fewer. Thank you.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Subject: ITAR Amendment - Categories I, II, and III
EAR Amendment - RIN 0694-AF47

I am writing to submit comments on the proposed changes to ITAR (USML) and EAR (CCL) recently published in the Federal Register. I write in a personal capacity but the views expressed are informed by my research, policy analysis, and teaching as a professor at the University of Michigan, Gerald R. Ford School of Public Policy.

By way of a few introductory remarks, I am familiar with the complexities of US arms export laws and policy, as well as the regulatory framework. There is a legitimate need for periodic updates of the USML and—in view of the labyrinth of entangled laws, regulations, and agencies involved in the current system—I am supportive of the reform initiative. I am generally more concerned about keeping weapons out of the hands of those who would misuse them than in making them easier to procure, but that end is not at odds with the objective of putting in place a single control list and a single administrative agency. The reform effort has not progressed to that point, however, and I am wary about these proposed regulatory changes as an interim step. I will also add that I have been following the export control reform project since it was announced in 2009 and this is the only time I have felt the need to express concerns about the proposed changes. That is largely due to the particular, complete and recognizable, weapons that are being considered for change.

1. I urge you to delay the effective date of the proposed changes until the Government Accounting Office or the Library of Congress has publicly reported to the Congress their impact on numerous statutes referring to “defense articles.”

If enacted, the changes would have implications for several provisions of law. From my reading of both sets of proposed regulations, I am not reassured that the implications have been fully considered. The USML is formally defined in the AECA (22 USC 2778) as a definitive list of defense articles,¹ and from a quick search of US statutes the term “defense article” appears in some 45 sections,² in many instances (but

¹ 22 USC 2778(a)(1).

² Office of the Law Revision Counsel, United States Code, <http://www.uscode.house.gov>.

not always) explicitly linked to the USML. In addition, several provisions of the AECA itself are explicitly linked to an item's presence on the USML (without necessarily referring to "defense articles"). On a separate statutory track, the Foreign Assistance Act was recently amended to include CCL 600 series items as defense articles, along with all items contained on the USML [22 USC 2304.(d)(2)(C)], but the legislation did not anticipate the new 500 series so there is likely a gap there with regards to Congressional intentions. To complicate things further, the US Munitions Import List (USMIL) makes liberal use of the term "defense article," defined as articles on the USMIL—which currently include the same items that are slated to lose the "defense article" designation that extends from inclusion on the USML – so that items designated as defense articles on the USMIL will not be considered defense articles for purposes of export.³

It is very challenging to sort out the tangle. Some of the instances where terms and definitions are at variance may not prove significant, but others may have far-reaching implications. Due to the disparate definitions and linkages, the proposal to remove specified firearms from the USML raises some important questions about the continuing applicability of provisions of law that refer to "defense articles," a term that currently encompasses such firearms. In numerous situations the current statutory treatment of non-automatic firearms would be altered – or at least become ambiguous—as a result simply of moving these weapons from Category I of the USML to the 500-series on CCL. Statutory provisions that could be affected by the proposed change range from Export-Import Bank financing of defense article sales to human rights conditionality on security assistance, to the provisions for third-party transfer of grant-supplied defense articles, and various reports to Congress. (See references in the footnote below.⁴) In some cases, the law in question is not directly linked to arms exports, but the relevant statute refers to defense articles and links the definition to items on the USML. In this way, removing specified firearms from the USML is likely to have a host of unintended and unanticipated repercussions.

Further, if semi-automatic weapons and other non-automatic firearms are removed from the USML it will impact the ability of law enforcement to charge weapons traffickers with violating the AECA as was done in several of the cases cited in a recent report from the Department of Justice on export enforcement.⁵

³ 27 CFR 447.11 and 27 CFR 447.21.

⁴ The numerous places where the meaning of "defense article" would be called into question by the proposed rules include:

- Export-Import Bank financing of defense article sales, including multiple end use considerations and other conditions (12 USC 635);
- Requirement to give Congress notice of commercial firearms sales of \$1,000,000 or more (22 USC 2776)
- Annual report to Congress on military assistance, and specifically on transfers of USML Category I firearms (22 USC 2415)
- Provisions for supplying defense articles on a grant-basis, and multiple restrictions (22 USC 2314)
- Conditions for third-party transfer of defense articles provided on a grant basis (22 USC 2314)
- Certification of end use as a condition of sale or lease of defense article (22 USC 2753)
- Post-delivery verification of credible reports of misuse of weapons (22 USC 2753)
- Brokers of items included on the USML are required to register and activity must be licensed; exporters of USML items must identify all consignees and freight forwarders in license application (22 USC 2778)

⁵ Department of Justice, "Summary Of Major U.S. Export Enforcement, Economic Espionage, And Sanctions-Related Criminal Cases," January 2018, <https://www.justice.gov/nsd/page/file/1044446/download> .

As Acting Assistant Secretary for Political-Military Affairs Tina Kaidanow explained to the House Foreign Affairs Committee last June,⁶ the US arms export architecture is very complex and involves what her predecessors have described as “cradle to grave” oversight of exported US *defense articles*. Removing that designation *defense article* from weapons that are not fully automatic has the effect of detaching them from the US Munitions List and the regulatory framework built around it: there may well be significant unintended consequences.

In the event that consideration of the proposals is not delayed, I would recommend several other changes to the proposed ITAR and EAR revisions.

2. Retain existing USML I(a) and (d) unchanged; retain the existing coverage of USML II(a) unchanged; delete proposed 0A501.a and .b; and limit proposed 0A502 to renumbering existing 0A984.

My concern here is based on principle and definition. Several of the weapons that would be moved to CCL are military-style weapons that are either used in battlefield situations or are substantially comparable to weapons as used in battlefield situations – including semi-automatic assault rifles and bolt-action sniper rifles. All of USML I(a), I(d), and II(a) are currently designated “significant military equipment” due to “their capacity for substantial military utility or capability,” per the ITAR definition.⁷ The prevalence of armed extremists and insurgents who depend on weapons currently included in USML Categories I and II makes the military utility or capability of these weapons as relevant as ever. Due to their size and long shelf life, firearms are easily diverted and resold on black markets around the world. The Department of Justice’s January 2018 summary of major US export enforcement cases noted above includes recent smuggling of semi-automatic assault rifles (and other firearms) to Dominican Republic, the Gambia, Russia via Latvia, Thailand and other destinations. In addition, the report documents the case of two men in Georgia attempting to export firearms to a range of international on the dark net, and another similar case from Kansas.⁸

While the US military may not derive great advantage from most of these weapons, they still have the military utility and capability of threatening the lives and welfare of many people around the world. It is in the interest of the US and American citizens to keep the tightest control on them. Indeed, it is for that very reason that the same weapons being proposed for removal from the US Munitions List are expected to remain on the US Munitions *Import* List, where their entry into the US will remain tightly controlled. It is also for that reason that a growing number of states are imposing limitations on the retail availability of these weapons and many retailers are voluntarily removing them from their shelves. They should remain where they are, on the USML.

⁶ “Foreign Military Sales: Process and Policy,” testimony from Tina S. Kaidanow, Acting Assistant Secretary, Bureau of Political-Military Affairs, Statement Before the Subcommittee on Terrorism, Nonproliferation and Trade, House Foreign Affairs Committee, June 2017. <https://www.state.gov/t/pm/rls/rm/2017/271928.htm>.

⁷ 22 CFR 120.7 at <https://www.gpo.gov/fdsys/pkg/CFR-2004-title22-vol1/pdf/CFR-2004-title22-vol1-sec120-7.pdf>.

⁸ Department of Justice, op. cit..

3. Before proposed regulatory changes are adopted, an opinion should be obtained from the Department of Justice concerning the legality of applying ITAR brokering restrictions to exports of firearms transferred from the USML to the CCL. Furthermore, Congress and the public should be informed as to how the proposed arrangements will address the risk of diversion.

There are several reasons to be concerned about the proposed rules pertaining to brokering. From their origin in the 1930s, a major intent of efforts to regulate arms exports has been to curtail illicit and undesirable trafficking in weapons. In the 1980s and 1990s, illicit flows of small arms flooded international markets, with calamitous effects in every region of the world. The rate of flow may have slowed since the 1990s, but as the 2018 Justice Department report attests, the efforts to supply contraband firearms are very much alive in our own time. From a global perspective, brokering laws are considered a weak link in the regulatory apparatus, to the extent that in the 1990s there was some talk of negotiating an international treaty focused entirely on arms brokering. Provisions written into US law around that time were considered some of the strongest in the world. With the transfer of specified semi-automatic and non-automatic weapons to CCL, the brokering laws would no longer be applied to these weapons (or would be applied only in a much-weakened version) and they would not be available to law enforcement for prosecution purposes.

My specific concerns with the proposal to apply existing AECA/ITAR brokering rules to items intended for transfer to the CCL are twofold, related to the dubious statutory underpinnings of the proposed rule change and to its practical implications.

(a) The first concern is a matter of statutory coherence and proper statutory authority. The brokering clauses of the AECA require commercial brokers involved in the transfer of defense articles to register with the State Department and apply for their transactions to be licensed (22 USC 2778).⁹ The AECA brokering provisions are explicitly linked to defense articles on the USML (and by implication, ITAR). Because the proposed changes to ITAR and CCL would remove specified non-automatic and semi-automatic firearms from the USML, on the face of it, it would seem that commercial brokers of these items would be released from ITAR registration and brokering requirements. To prevent this outcome, the State Department proposes a patch, by asserting that the AECA brokering provisions will also apply to the US Munitions *Import* List (which, as noted above, will continue to include the items that—for export purpose—are deemed no longer to warrant control under the USML). The intended effect is that brokers wanting to *export* items included on the list of items controlled as defense articles for *import* (but not for export) will be subject to the rules pertaining to the export of such items. The logic is convoluted at best, and it raises questions about the statutory grounding for requiring brokers who are exporting items “no longer warranting control under USML” to register with the State Department and comply with related ITAR requirements. Given the complexity of the issue and the risks associated with brokering activities, it would seem advisable and prudent to seek a legal opinion within the Executive Branch to ensure that the provisions of the AECA pertaining to brokers—including the registration requirement-- can be applied

⁹ Per 22 USC 2778 (b)(1)(A)(i), “...every person (other than an officer or employee of the United States Government acting in official capacity) who engages in the business of brokering activities with respect to the manufacture, export, import, or transfer of any defense article or defense service designated by the President under subsection (a)(1), or in the business of brokering activities with respect to the manufacture, export, import, or transfer of any foreign defense article or defense service (as defined in subclause (IV)), shall register with the United States Government agency charged with the administration of this section, and shall pay a registration fee which shall be prescribed by such regulations.

robustly to all involved in the wide range of brokering activities associated with the *export* of items on the US Munitions Import List.¹⁰ Such a legal opinion should be obtained and considered before the regulatory changes are adopted.

(b) The second issue about brokering rules relates to the practical effects of the numerous proposed changes to ITAR section 129. It is hard to imagine, in the first place, the steps by which the licensing of a transaction will be handled by Commerce and any brokering aspects (including completion of information required by 22 CFR 129.6) will be handled by State. It boggles the mind to consider how this might actually amount to a time-saving simplification of rules. I am primarily concerned about the proposed amendment 129.2(b)(2)(vii), however, which appears to negate the controls on brokering for transactions subject to EAR and open a significant loophole for unscrupulous brokers. If I have understood the proposed changes to Section 129.2 correctly, if a Michigan-based retail sports outlet licensed to sell firearms in the US wanted to sell, say, AR-15 semi-automatic rifles to clients in another country, then so long as the Michigan retailer could secure approval via the BIS licensing process, the various parties involved in shipment, financing, and possibly transshipment would be exempt from any registration and approval requirements. Nor would they necessarily be known to licensing and enforcement agents based in the Commerce Department. What in this scenario would deter an unknown and independent handler from diverting the weapons to unauthorized end-users? I would like to assume that government officials in the State and Commerce Departments have thought through the implications of the proposed rules as they might be bent for nefarious purpose as well as their service for industry cost and convenience, but the published rules do not provide assurance in that regard. **More clarification is needed about how the brokering regulations will be applied, how the inter-agency process will be managed, and the extent to which the proposed arrangements for registering and licensing brokers involved in acquiring, financing and transporting exported firearms will address the risk of diversion to non-authorized end-users.** One effect of transferring non-automatic firearms from the USML to the CCL is to remove them from the remit of the State Department's Blue Lantern program, which otherwise might be engaged to make post-shipment checks. It is not clear whether Commerce has a comparable program or what resources it will assign to monitoring the commerce in semi-automatic firearms.

4. Amend proposals for EAR Section 734.

BIS has indicated that items moving "to the CCL would be subject to existing EAR concepts of jurisdiction and controls related to 'development' and 'production,' as well operation, installation, and maintenance 'technology.'" This approach would appear to give rise to the possibility of widespread and openly sanctioned circulation of open source, non-proprietary instructions for using computer-aided design (CAD) files to produce via 3D-printing technology, or text files to produce via CNC milling the firearms removed from USML. Until now, this development has been blocked in the courts via application of ITAR provisions requiring export license. **Either the Department of Commerce should clarify that it views any software instructions for producing controlled firearms already to be within the ambit of the EAR, or EAR Section 734.7 should be amended to bring circulation of open-source, non-proprietary CAD and other electronic files under EAR control - possibly by establishing that electronic files for producing functional firearms are subject to EAR control as production technology.**

¹⁰ When questions arose in 1996 as to the authority of the President to restrict munitions imports under the AECA, the Office of Legal Counsel in the Justice Department was asked to provide an opinion. A similar request for opinion is warranted here. See https://www.justice.gov/sites/default/files/olc/opinions/1996/02/31/op-olc-v020-p0049_0.pdf.

5. **Amend provisions for License Control – Crime Control**

Shotguns controlled under 0A502 are subject to the Crime Control because they are not controlled by Wassenaar. It is not evident, however, why items 0A501a are controlled for Regional Security but not Crime Control, as firearms are a main element of crime control equipment used by police and security forces. Moreover, federal statutes explicitly prohibit the export of crime control equipment to police and security forces in countries whose governments have a consistent pattern of gross violations of internationally recognized human rights, with exceptions requiring Presidential certification. **To bring the proposed regulations into alignment with provisions of the Foreign Assistance Act [22 USC 2304(a)(2), which makes explicit reference to crime control equipment under the aegis of the (expired) Export Administration Act], items in 0A501A should be subject to Crime Control.**

6. **Include information from enhanced reporting on certain firearms exports in annual 655 Report.**

Enhanced reporting of items in the 501 series is potentially one bright spot in the proposed regulations. Several proposed changes are welcome, including: proposed changes in EAR part 748 requiring information about required import licenses; proposed changes in reporting mandated in EAR part 758; the required use of EEI filing for 0A501.a firearms; and the proposed recordkeeping requirement in part 762.

If the proposed rules are ultimately accepted, the information provided to the Wassenaar Arrangement and the UN Register of Conventional Arms will provide more granular information about US commercial exports of firearms, which seemingly could be included without significant additional effort in the annual 655 report mandated by the Foreign Assistance Act, 22 USC 2415.

7. **The balance of costs and benefits significantly favors industry over the taxpayer.**

The two sets of proposed rules include calculations of expected costs and benefits of the changes. Having invested several hours parsing the proposed rules, I suspect that one major benefit of the changes will accrue to the attorneys who help clients wend their way through federal regulations. The registration system as it was initially set up was intended to pay for itself, via modest registration and licensing fees that covered the costs of recording and updating information on US arms manufacturers and reviewing details for proposed transactions. In some sense, it has been a fee-for-service arrangement. The proposed changes significantly alter that approach with regards to firearms proposed for transfer to the CCL.

Except for the presumably few brokers unable to qualify for the firearms registration exemption outlined in proposed changes to ITAR section 129.2, no registration or license fees will be collected. Some of the transactions may be straightforward, but the workload promises to be substantial, with 4000-10,000 applications and virtually every 0A501 transaction subject to at least regional security controls, with no license exceptions available. **Whereas under the current system fees paid by industry and brokers help offset the costs of processing the license applications, under the proposed system the expenses associated with reviewing license applications will be charged to the taxpayer.** In the current political environment where government hiring is anathema, unless a streamlined new process delivers extraordinary returns, it is difficult to imagine how the tally could come out in the taxpayer's favor without

significant sacrifice of quality control. With respect to firearms exports, taxpayers and the public at large should be concerned about pressures to cut corners that could result in authorization of irresponsible transfers. **In my view as a taxpayer, the ITAR fee structure is yet one more reason for retaining non-automatic and semi-automatic firearms on the USML, and should these weapons ultimately be transferred to the CCL, I urge public officials at the Commerce Department to explore charging a service fee for processing export license applications.**

Conclusion

I appreciate the opportunity to comment on these rules. I am disappointed, however, that by and large they downplay the lethality of the weapons currently controlled in ITAR categories I and III. I realize that these documents were prepared for a different purpose than the materials posted to inform the global public about US government programs and policy, but **the difference between the tone and emphasis of the proposed rules and the public presentation of US policy on the export of small arms and light weapons over the past twenty years is striking.** By contrast to the public statements and documents, including the 2017 Congressional testimony by a State Department official, the emphasis in these regulations is on reducing transaction costs for industry rather than promoting the public good, including national security and public safety.

In response to public comments on the proposed regulatory changes, I hope that the Departments of State and Commerce will reconsider the proposal to transfer any complete weapons from the USML to CCL. In the event that the proposed regulations go forward substantially unchanged, I can only hope that other countries will tighten and strictly enforce their own import restrictions to reduce the risk of diversion and misuse.

Thank you,

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I oppose the proposed rule for the following reasons:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

On May 24, the Trump Administration formally proposed a new rule to loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals.

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The rule change would make the world a far more dangerous place because:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The idea that exporting and selling guns to other countries is just another sale seems absolutely ridiculous to me. This is not like shipping apples overseas. Apparently farmers of some products are now being impacted with tariffs, but we want to make it easier to sell guns?? How does this make sense? It's also looking like Russians may have made political contributions to our elections via the NRA. I'm sure I have a lot of company in thinking that this is crazy.

Thank you for your time and consideration. I hope you will vote against this change in rules.

I strongly OPPOSE the proposed rule.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Loosening the regulations over gun exports increased the risk that dangerous weapons could end up in the hands of international criminals. The proposed rule does not adequately address our security needs, terrorist threats, and the need for transparency so Congress and the public may understand the impact of these rules.

The administration should consider other alternatives to better balance the important interests at stake. The rule change removes licensing requirements for brokers, increasing the risk of trafficking, and removes the State Dept. block of 3D printing of firearms. effectively enabling such printing of lethal weapons in the US and around the world.

American citizens want more regulations on firearms especially concerning shipments that could make terrorism even more likely. We do not want less regulatory action, we want more regulations on guns and selling guns.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

My name is Hazel Ryon. I oppose the transfer of oversight of firearms export from the state to commerce department. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Please let us know if you did this and how long it took. It should take one minute or less.

Thank you!

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Comments re: ITAR Amendment - Categories I II, and III; EAR Amendment - RIN 0694-AF47

Jeff Abramson

July 9, 2018

I have worked in the nonprofit sector for more than a decade in efforts to promote more responsible trade in conventional weapons and find these proposed regulatory changes to be irresponsible and dangerous. They continue the wrong-minded approach of the Trump administration to treat weapons as any other trade commodity, threatening to undermine long-term global security and true U.S. national security interests. While my comments below are as an individual concerned U.S. citizen, they are informed by my work as a senior fellow at the Arms Control Association, coordinator of a global network of professionals engaged on these issues –the Forum on the Arms Trade--, and former leader within the international Control Arms campaign that championed the creation and now implementation of the Arms Trade Treaty.

In addition to these comments, I commend to reviewers the comments by experts listed by the Forum on the Arms Trade, including: Colby Goodman, William Hartung, Christina Arabia; Adotei Akwei (on behalf of Amnesty International USA); and John Lindsay-Poland, which delve into many of these points in much greater detail.

Specific concerns include:

Loss of Congressional oversight

In 2002 Congress amended its notification threshold so that it would be informed of potential commercial sales of firearms under USML category I when they were valued at just \$1 million, as opposed to \$14 million for other major weapons sales. Such notifications have been instrumental in forestalling unwise sales, including last year to Turkey and the Philippines. No similar statutory requirement of congressional notification exists for most arms sales under the CCL, meaning Congress would lose its oversight role on these weapons.

Public reporting should be improved, not weakened

The public gains some insight into the transfer of weapons via Congressional notifications, and also through the State Department's 655 report and Blue Lantern investigations report. Those reports could provide much more detail, such as the number of specific weapons involved and other data, rather than broad categorical details (655 report). Commerce reporting provides even less data, with similar reports covering around 20 countries per year. We deserve better transparency, not worse. If this transfer of authority moves forward, the Commerce department should be required to improve its reporting.

Non-sensical to no longer consider these military weapons/defense articles

The transfer of regulatory authority to the Commerce Department is claimed to be wise because these weapons no longer "provide the United States with a critical military or intelligence advantage or, in the case of weapons, are inherently for military end use," and further because many "are widely available in retail outlets in the United States and abroad."

Applying this general approach--taken from the larger export reform initiation--falls apart when we are looking at firearms and their ammunition. These weapons are and should be controlled because a

significant amount of violence that occurs, including against U.S. military and law enforcement personnel, is inflicted by small arms. Research indicates that the types of weapons being transferred to Commerce control—AR-15s and AK-47 style assault rifles and their ammunition—are “weapons of choice” of drug trafficking organizations in Mexico and other Latin American countries. Many can also be easily converted to fully automatic weapons, which will remain under USML control. U.S. military members often operate their fully-automatic-capable weapons in a semi-automatic or less-than-automatic mode. Plus, many sniper rifles to be moved to Commerce control are in U.S. military use.

In addition, in many of the countries where these weapons are likely to be marketed, they are considered military weapons and tightly controlled. As currently proposed, they would also remain on the US Munitions Import List (USMIL), which is proper. Why they would therefore not remain on a similar export list is illogical.

Being commercially available in the United States is not a good indicator of whether these weapons merit the oversight of the State Department, which is better tasked with weighing non-commercial concerns. Nor is it proper to consider these weapons somehow safer than others on the USML.

Upsetting norms on human rights as relates to the arms trade

The United States maintains strong laws against the provision of arms where certain human rights abuses are of concern (even if we do not always live up to those laws). Some of those laws may not apply to items in the 500 series. And although the State Department will be consulted in licensing decisions, it is difficult to see how this new approach would strengthen the ability of DRL and others concerned about human rights to forcefully insert human rights into arms sales decisions.

At a time where the global community must make the arms trade more responsible, these proposed changes would make its largest arms dealer, the United States, appear less responsible and less concerned about the human rights implications of the arms trade.

Making 3-D printing easier is dangerous

It is unfathomable how allowing untraceable 3-D printing of firearms serves U.S.-recognized goals to combat illicit trafficking of firearms. Our country has agreed to support the Program of Action (PoA) on small arms and light weapons and the International Tracing Instrument (ITI), has signed accords on arms transfers and tracing in the Americas, and argued for why these efforts are so important. The United States also is the world’s largest donor, as I understand it, to helping countries build their ability to trace weapons, secure weapons stockpiles, and to destroy those stocks when warranted. Yet, this transfer of authority to Commerce appears to open the door to unfettered 3D printing, which threatens to undermine nearly all those efforts.

Overall

At a fundamental level, U.S. arms are not like any other commodity and should not be treated as such. These are first and foremost killing machines. The over-emphasis on economic security threatens to jeopardize higher priorities, including peace and security concerns. If more weapons flow to countries with poor human rights records, norms around responsible weapons use and transfer will be harder to build and uphold.

General Comment

My name is Suzanne and I'm a voter in San Diego, CA. As a victim of gun violence, I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. T

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

July 9, 2018

Sarah Heidema, Director
Office of Defense Trade Controls Policy
Bureau of Political-Military Affairs
U.S. Department of State
2401 E Street NW
Washington, D.C.

ATTN: Request for Comments Regarding Reform of USML Categories I, II, and III
Public Notice 10094, RIN 1400-AE30, 83 FR 24198

Dear Ms. Heidema:

Esterline Technologies Corporation supports the goals and objectives of the Export Control Reform (ECR) Initiative, and submits the following comments on the reform of USML Categories I, II, and III:

Summary of Comments and Recommendations

This section outlines our main comments, each of which is explained more fully in the remainder of this letter.

1. Keep the Commerce Control List free of AECA brokering.
2. Coordinate changes to USML Categories I, II, and III with changes to the United States Munitions Import List.
3. Clarify classification of propellant containers and combustible ordnance components.
4. Address conflict with companion rule 83 FR 24166.

Comments and Recommendations

1. Keep CCL free of AECA brokering

One of the main advantages of ECR is that items on the CCL are not subject to the brokering requirements in section 38(a)(1) of the Arms Export Control Act (AECA) and 22 CFR 129. This advantage has been highlighted by the U.S. Government in public

remarks, such as Under Secretary Hirschorn's address to the BIS Update 2014 Conference.

Absence of brokering controls for CCL items has more significance than the absence of double licensing. Currently, items subject to the CCL do not require registration or licensing under 22 CFR 129, period. Once an item is determined to be on the CCL, it is clear that it is not subject to brokering, so there is no need to review the USMIL or the requirements in 22 CFR 129 before engaging in business. Knowledge that items on the CCL are not subject to brokering simplifies and streamlines transactions. Addition of brokering requirements for any item on the CCL would be an unwelcome development as it would introduce a significant complicating factor.

Esterline recommends DDTC reform USML Categories I, II, and III without introducing brokering controls to items in the CCL.

2. Coordinate changes to USML Categories I, II, and III with USMIL

The proposed rule would add the need to review the USMIL for activities that are not imports to the United States. Classifying items against multiple control lists for a single transaction increases the cost and complexity of U.S. export controls.

Esterline recommends DDTC coordinate its change to USML Categories I, II, and III with the Bureau of Alcohol, Tobacco, Firearms, and Explosives so that a corresponding change is made to the USMIL at the same time. This would eliminate the need to consider both the USML and the USMIL when deciding whether a transaction involves brokering.

3. Clarify classification of both combustible and consumable case components.

With regard to the proposed paragraph III(d)(7), Esterline suggests changing the text from

(7) Cartridge cases, powder bags, or combustible cases for the items controlled in USML Category II

to

(7) Cartridge cases, powder bags, charges, propellant containers, or combustible cases for the items controlled in USML Category II, or "specially designed" parts and components therefor.

Alternately, include an explanatory note:

Note to paragraph (d)(7): combustible cases include propellant containers for mortar systems and artillery charges, consumable case sets that include both combustible and inert parts and components, and their parts such as closure tabs and interfaces.

This change would more clearly describe the range of articles that DDTC appears to be intending to capture in this paragraph, and would simplify the classification of their parts and components which are inherently for military end use.

4. Address conflict with companion rule 83 FR 24166

The proposed rule is in conflict with the companion Commerce Department proposed rule, 83 FR 24166, Docket No. 111227796-5786-01, RIN 0694-AF47. This leaves items transferred from the USML to the CCL potentially without a controlling ECCN.

Esterline recommends DDTC coordinate with BIS to resolve this conflict.

The BIS proposed rule states:

Category III of the USML, entitled “Ammunition/Ordnance,” encompasses ammunition for a wide variety of firearms that may have military, law enforcement or civilian applications. Ammunition that has only or primarily military applications would remain on the USML as would parts, production equipment, “software” and “technology” therefor.

The State Department proposed rule states with respect to USML Category III:

Additionally, paragraph (c), which controls production equipment and tooling, will be removed and placed into reserve. The articles currently covered by this paragraph will be subject to the EAR.

In effect, the BIS proposed would receive specific production and test equipment for conventional ammunition into ECCN 0B505, while the State Department proposed rule would move all production and test equipment for ammunition and ordnance to the CCL, conventional or otherwise.

ECCN 0B505 would only control equipment specially designed for the production of ammunition and ordnance that is controlled in USML Category III if it falls within the list “tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment.” This list is less than the scope of production equipment that will no longer be controlled in USML Category VIII(c) by the proposed companion rule, 83 FR 24198.

Similarly, ECCN 0E505 would not control technology for the technology for equipment specially designed for the production of ordnance, or technology for the software specially designed for such equipment.

A number of the articles proposed for USML Category III by 83 FR 24198 are not conventional ammunition, and their specially designed production equipment exceeds the specific list “tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment.”

For example, production of combustible ordnance requires specialized production machines that do not fall within the list "tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment." Under the proposed rules, these specialized machines would fall outside both the USML and ECCN 0B505.

Summary

Thank you for the opportunity to comment on the proposed reform of USML Categories I, II, and III. Please feel free to contact me if you have any questions about the comments and recommendations provided.

Regards,

General Comment

I strongly OPPOSE switching the regulation of firearms exports from the State Department to the Department of Commerce. This change would make our country and the world more dangerous in many ways:

It would remove the State Department ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally.

It would remove licensing requirements for brokers.

Would stop the program that inspects pre-license guns and issues reports.

Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and fuel increased organized crime and terrorism.

There is NO need switch control of firearms exports unless it is to pay for firearms lobbyists. Please do not approve this move.

General Comment

I am completely opposed to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I am an active member of San Diego 4 Gun Violence Prevention and it has come to my attention that the Trump Administration is proposing to transfer licensing and oversight of firearms exports from the State Department to the Department of Commerce. It is my opinion that if this occurs, more firearms will get in the hands of criminal organizations, human rights abusers, and terrorist groups and is being pushed to open up international markets to compensate for lagging domestic gun sales. I am vehemently opposed to this proposed change for these reasons:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.
- Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

Please consider not implementing this proposal.

ECR Parts Comment

**Comment on Proposed Rule for “International Traffic in Arms Regulations: U.S.
Munitions List Categories I, II, and III”**

RIN 1400–AE30

Comment on Proposed Cat. I(g) and Cat. I Note 1

This law firm, Mark Barnes & Associates, submits this comment on behalf of our clients engaged in the manufacture of firearms and associated parts. The purpose of this comment is to request that the final rule clarifies Cat. I(g)’s applicability to parts such as machinegun barrels that are commonly used in both semiautomatic and fully automatic firearms.

The proposed Cat. I(g) would list: “Barrels, receivers (frames), bolts, bolt carriers, slides, or sears specially designed for the articles in paragraphs (a), (b), and (d) of this category.” The articles in paragraphs (a), (b), and (d) of Category I would encompass firearms that use caseless ammunition, fully automatic firearms to .50 caliber inclusive, and fully automatic shotguns. In other words, Cat. I(g) would control barrels, receivers, bolt carriers, slides, or sears (“Parts”) specially designed for fully-automatic firearms.

The proposed rule includes Note 1 to Category I which clarifies that “Paragraphs (a), (b), (d), (e), (g), (h), and (i) of this category exclude: . . . parts, components, accessories, and attachments of firearms and shotguns in paragraphs (a), (b), (d), and (g) of this category *that are common to non-automatic firearms* and shotguns. The Department of Commerce regulates the export of such items.” (emphasis added).

Aside from a sear and receiver, it is extremely rare for any part or component of a fully-automatic firearm to not be common to a non-automatic firearm. Almost all fully automatic firearms have semi-automatic variants available on the commercial market. For example, FN USA manufactures and sells to the public a semi-automatic variant of the belt fed M249 Squad Automatic Weapon (SAW) with the only distinction from the fully automatic version being the receiver and fire control group. (<https://fnamerica.com/products/rifles/fn-m249s/> “Semi-auto replica of the government-issue FN M249 SAW”). The barrel is identical to the fully automatic version. Accordingly, it would follow that a military M249 barrel would be controlled by the Department of Commerce.

Many companies will buy fully automatic firearms with destroyed receivers (“parts kits”) from the military or police departments to construct and sell semi-automatic variants to the public. These parts kits generally consist of all parts other than the receiver (which is usually cut into three parts with a torch). Additionally, Mil-spec M4 and M16 fully automatic bolt carriers as well as barrels specially designed for fully automatic fire, are often sold with and made for civilian AR-15s.

Based upon the plain reading of the proposed Cat. I Note, some clarification is needed as to whether barrels, receivers (frames), bolts, bolt carriers, slides, or sears are non-ITAR simply because they are incorporated in semi-automatic variants on the civilian market, as almost all firearms parts, especially barrels, can be common to both semi-automatic and fully automatic firearms. We think that unless a part converts a firearm to fully automatic functionality, it should be controlled by the Department of Commerce.

Should you have any questions on this comment, please do not hesitate to contact Michael Faucette at (202) 626-0085 or michael.faucette@mbassociateslaw.com.

Re: Safari Club International Comments on Proposed Amendment to the International Traffic in Arms Regulations: Revision of U.S. Munitions List Categories, I, II and III, Docket RIN 1400 AE30, DOS-2017-0046; and Proposed Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML), RIN 0694-AF47, Docket No. 111227796-5786-01.

Dear Sirs:

Safari Club International (SCI) submits these comments in support of the U.S. Department of State's proposed amendments to the International Traffic in Arms Regulations (ITAR) to revise Categories I, II, and III of the U.S. Munitions List (USML) to describe more precisely the articles warranting export and temporary import control on the USML. SCI also supports the Department of Commerce, Bureau of Industry and Security's proposed determination that these items no longer warrant control under the U.S. Munitions List (collectively referred to as "proposed regulations").

SCI does not support the proposed regulations' finalization and implementation of a modified procedure for the temporary export of firearms and ammunition by individuals who wish to travel outside the U.S. for recreational hunting and shooting purposes. The procedure requires travelers to use the Automated Export System (AES) to register their personal firearms and ammunition. This is an inappropriate and unworkable system for the individual who wishes to temporarily export his/her firearms. As an alternative, SCI requests that the proposed regulations be modified so that they delete the AES registration requirement and formalize and codify the Form 4457 process to ensure its consistency and use by all Customs and Border Protection (CBP) officials.

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 2 of 6

Safari Club International

Safari Club International, a nonprofit IRC § 501(c)(4) corporation, has approximately 50,000 members worldwide, many of whom are U.S. residents who travel with their firearms for hunting and recreational shooting around the world. They are individuals, not businesses, who seek only to bring their own property with them when they travel and return to the U.S. with that same property. Their activities are legal and are regulated by the countries they visit to hunt and shoot.

The Origin of the AES Registration Requirement

The export of firearms is controlled under the ITAR, which is administered by the U.S. Department of State, Directorate of Defense Trade Controls (DDTC). ITAR regulations have historically included an exemption under 22 CFR §123.17(c) allowing U.S. persons to temporarily export without a license up to three nonautomatic firearms and not more than 1,000 cartridges. This exemption is widely used by hunters and other sportsmen, who travel overseas with firearms to be used for sporting and other legal purposes. To use the exemption, the U.S. person must declare the firearms and/or ammunition to CBP, carry the firearms as part of their baggage, and not transfer ownership while abroad.

In 2011, DDTC published a Federal Register notice of proposed rulemaking that principally revised the exemption related to personal protective equipment, but also included a requirement that those traveling with firearms register through the Automated Export System (AES): “The person. . . presents the Internal Transaction Number from submission of the Electronic Export Information in the Automated Export System per §123.22 of this subchapter....” 76 Fed. Reg. 16353, 163534 (Mar. 23, 2011).

The system required those registering to provide an Employer Identification Number (EIN), available only to commercial enterprises. The registration system also involved procedures far too complicated and burdensome than necessary for individuals seeking only to travel with their personal equipment. Because the registration system imposed registration obligations that would have forced hunters and shooters to make false representations to the Internal Revenue Service, jeopardized their ability to obtain permits to import the wildlife they successfully hunted, and imposed burdensome obligations unnecessary and inappropriate for non-commercial importers, CBP agreed to postpone the implementation of the registration requirements and to continue the use of Form 4457 as the mechanism to facilitate temporary firearms export. Even that solution presented problems. Due to the inconsistencies in the way that CBP personnel issued the forms, U.S. residents have encountered difficulties in taking their firearms to foreign countries (e.g. South Africa) that attribute much greater significance to Form 4457 than does the U.S.

Collection of Data Through AES Registration is Inappropriate

Without good reason, the proposed regulations would reactive the AES registration requirement for individuals seeking to temporarily export their firearms and ammunition.

Consistent with the ITAR requirements previously applicable to temporary exports of the firearms and associated ammunition covered by this rule, [Bureau

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 3 of 6

of Industry and Security (“BIS”)] is proposing to modify § 758.1 of the EAR to make clear that exporters would continue to be required to file Electronic Export Enforcement (EEI) to the Automated Export System (AES) for transactions involving such firearms and associated ammunition that are otherwise authorized pursuant to License Exception BAG.

83 Fed. Reg. 24174. The purpose of the registration system is not to facilitate the temporary export and reimport of firearms and ammunition. According to CBP, the collection of export data through the registration is designed to help with the “compilation of the U.S. position on merchandise trade” and is an “essential component of the monthly totals provided in the U.S. International Trade in Goods and Services (FT900) press release, a principal economic indicator and a primary component of the Gross Domestic Product.” <https://www.census.gov/foreign-trade/aes/aesdirect/AESDirect-User-Guide.pdf>

The government has no need to collect this data. The data, provided by individuals who wish to temporarily export and then re-import the same personally owned equipment, has nothing to do with the “U.S. position on merchandise trade” or the “Gross Domestic Product.”

The only purpose for the collection of data from individual hunters who travel with their firearms is likely to enable the government to maintain records on these individuals and their legal activities abroad. In the proposed regulations, the BIS acknowledges that the intention of the AES filing system was to “track such temporary exports of personally-owned firearms and ammunition.” SCI strongly opposes this attempt to “follow” and retain records of the individuals who travel with their firearms for hunting purposes. These individuals have taken no actions meriting the government’s desire or need to collect and maintain data on their activities. The government should remove the requirement to collect such data.

The Proposed Regulations Recognize Flaws in the Registration System

The proposed regulations provide the public with the opportunity to comment on whether CBP has been able to remedy the problems identified when CBP first attempted to activate and implement the new requirement. The drafters also condition the reactivation of the AES registration requirement on CBP’s success in remedying the problems that plagued the introduction:

Whether and how BIS includes this requirement in a final rule would be based on whether CBP is able to update its processes, and other agencies as needed, to allow for individuals to easily file EEI in AES by the time a final rule is published. If CBP is not able to do so, then the final rule may direct exporters to continue to use CBP’s existing process, which is the use of the CBP Certification of Registration Form 4457, until a workable solution is developed or CBP suggests an alternative simplified solution for gathering such information for temporary exports of personally-owned firearms and ammunition. BIS will also take into consideration any public comments submitted on this aspect of the proposed rule regarding imposing an EEI filing requirement in AES, as well as

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 4 of 6

comments on the current practice of using the CBP Form 4457, as well as any other suggestions on alternative approaches for tracking such information.

83 Fed. Reg. 24174. AES registration should not be required as CBP has not remedied the problems that plagued the initial attempted implementation of the system.

The AES Registration System Requires Individuals to Provide False Information to the Internal Revenue Service

The AES registration system continues to require persons temporarily exporting firearms or ammunition to present “the Internal Transaction Number from submission of the Electronic Export Information in the Automated Export System.” The AES system requires an EIN before a user can submit any data. The Census Bureau administers the AES system, and their website still includes the following FAQ:

The Internal Revenue Service (IRS) site states that an Employer Identification Number (EIN) is for use in connection with business activity only. It further states, do not use your EIN in place of a Social Security Number. The information provided by the Census Bureau and the IRS is conflicting.

The IRS publication titled “Understanding Your EIN” which is located on their webpage (<http://www.irs.gov/pub/irs-pdf/p1635.pdf> [external link]) states that “...Employer Identification Number (EIN) is for use in connection with business activity only, do not use your EIN in place of a Social Security Number”.... However, for the purposes of registering or filing in the AES you can and should use your EIN. While it is not specifically stated, an EIN can be obtained for government reporting purposes when a person does not own a business.”

<https://www.census.gov/foreign-trade/regulations/ssnfaq.html>. The Census Bureau site expressly tells individual exporters to ignore the IRS’s instructions and to misrepresent themselves as businesses, in order to obtain an EIN. The IRS site contains no instructions providing such an exception.

The Census guidelines instruct individuals to select “Sole Proprietorship” as the “type of legal structure applying for an EIN,” which is explained by IRS as: “sole proprietor includes individuals who are in business for themselves, or household employers.” The individual is further required to select “started a new business” as the reason why the sole proprietor is requesting an EIN. For an individual seeking to travel overseas with their firearms, this information is confusing, false and entered only to obtain the EIN.

As nothing has changed to remedy this problem since the AES registration requirement was originally imposed, the regulations should not include this requirement.

The AES Registration System is Designed for Commercial Operations and Is Overly Complicated for the Individual Exporter

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 5 of 6

Despite the years that have passed since CBP's attempt to require individuals to register through the AES system for the temporary export of their firearms, the agency has not made meaningful progress in reducing the overly complicated process for registration. The system is designed for businesses whose repeated use of the system merits the time and patience required for registration. The online AES Direct Users' Guide (which contains no reference to individuals, temporary export, or firearms) is a 39-page manual that an individual would be required to learn in order to register with the system. The registration mechanism is unnecessarily burdensome and complicated for the private individual who does not wish to participate in commercial trade but merely wants to temporarily take his own firearm with him outside the U.S. for a recreational hunt or shoot.

Individuals Identifying Themselves as a Commercial Enterprise Could Jeopardize Their Ability to Import Legally Hunted Animals

The requirement that individual hunters obtain an EIN, recognized by the IRS for business purposes only, could potentially jeopardize the ability of hunters to import some sport-hunted trophies from abroad. The U.S. Fish and Wildlife Service (FWS) prohibits the importation of many sport-hunted species for commercial purposes. A hunter who registers as a business for the purpose of leaving the country and exporting the firearms he plans to use to hunt outside the United States, risks the FWS prohibiting the hunter from importing his trophies and otherwise penalizing the hunter.

The AES Registration System Does Not Replace the Use of Form 4457

As mentioned above, the proposed regulations did not intend the AES registration requirement to replace CBP Form 4457 for the temporary export and reimport of personally owned firearms. Even with the AES registration requirement, temporary exporters of firearms and ammunition will still need to obtain and complete Form 4457 and display it upon re-entry into the U.S. to prove that they did not acquire the firearms abroad. Because (1) the AES registration requirement and its purpose of tracking the activities of law-abiding hunters and recreational shooters are neither necessary nor appropriate for the temporary export activities of hunters and shooters, and (2) these individuals will continue to need to obtain and display Form 4457, the logical solution would be to abandon the AES registration requirement, retain the Form 4457 practice, and improve the mechanisms for issuing the latter.

Future Use of Form 4457 Needs to Reflect the Greater Significance of the Document Outside the U.S.

While CBP has used Form 4457 as primarily a mechanism for determining whether the firearm being imported into the U.S. is the same property the individual exported when he or she left the country, other governments attribute greater significance to the document.

South Africa, for example, treats the form as a pseudo license of a U.S. resident traveling with a firearm. South African police have conditioned import of firearms into their country on the U.S. resident's possession of what South Africa considers to be a valid Form 4457. In 2017, this led

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 6 of 6

to problems for hunters traveling to South Africa when the CBP began issuing Form 4457s with already expired expiration dates. Although CBP explained that the agency attributes little meaning to the form's expiration date, South African officials considered the forms expired and prohibited hunters from entering the country with their firearms due to the apparent expired appearance of the forms.

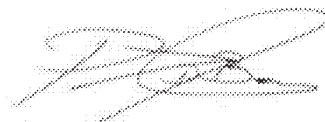

The problem was exacerbated by different offices of CBP issuing different versions of the form, which also did not match the form available from CBP's website. After representatives of SCI and other organizations engaged in numerous discussions on the issue with CBP personnel, CBP adopted a temporary solution of issuing new forms with a future expiration date. CBP needs to adopt a more permanent solution that addresses the significance of the form in other countries, such as issuing forms without any expiration date.

SCI's Recommended Resolution and Revision of the Proposed Rules

SCI recommends that the drafters delete the AES registration requirement entirely for individuals and make it clear that registration is not required for those who wish to temporarily export their firearms from the United States. No tracking of the legal activities of these hunters and shooters should be conducted and no compilation of data about these individuals should be permitted. Instead, the drafters should formally codify the use of Form 4457 for individuals and should identify a single consistent standard for the form that contains no date that could be interpreted or misinterpreted by anyone as an expiration date.

Thank you for the opportunity to comment on these proposed regulations, and in particular to advocate for the removal of a process that should not be applied to individuals who wish only to temporarily export their firearms in order to engage in legal activities outside of the United States. If you have any questions or need anything further, please contact Anna Seidman, Director of Legal Advocacy Resources and International Affairs, aseidman@safariclub.org.

Sincerely,

A handwritten signature in black ink, appearing to read 'Paul Babaz', with a stylized flourish at the end.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

This proposed policy is especially bad in a time when the US government is turning away refugees flee violent conflict and violent gangs.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

RE: Docket Nos. DOS-2017-0046, BIS-2017-0004

ITAR Amendment -- Categories I, II, and III and Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control under the United States Munitions List (USML)

This comment is submitted on behalf of Giffords and Giffords Law Center ("Giffords") in response to the Proposed Rules published by the Departments of State and Commerce on May 24, 2018 regarding the classification and administration of exports of certain firearms and ammunition. The Proposed Rules are complex and would represent a dramatic change in the regulatory structure governing firearm exports. We are concerned that the Proposed Rules may not adequately address our national security, foreign policy, international crime, or terrorism threats. In sum, we are concerned about potential loss of life. We also believe the Proposed Rules do not adequately address the need for transparency so Congress and the public may understand the impact of these Rules on potential weapons exports.

Giffords is committed to advancing common-sense change that makes communities safer from gun violence. Operating out of offices in San Francisco, New York, and Washington, DC, our staff partners with lawmakers and advocates at the federal, state, and local levels to craft and enact lifesaving gun safety laws, participate in critical gun-violence-prevention litigation, and educate the public on the proven solutions that reduce gun violence.

THE PROPOSED RULES APPEAR DRIVEN BY THE INTERESTS OF THE GUN INDUSTRY

Even the National Rifle Association (NRA) admits that the Proposed Rules were drafted with “the goal of increasing U.S. manufacturers’ and businesses’ worldwide competitiveness.” These Rules are “designed to enhance the competitiveness of American companies in the firearms and ammunition sectors,” allowing firearms and ammunition “to be subject to a more business-friendly regulatory climate.”¹

We are concerned that the Proposed Rules elevate the desire of American gun manufacturers to compete with international arms dealers over the danger that exported firearms will contribute to international gun crime and violence. The United States must not prioritize gun industry profits over human lives.

THE PROPOSED RULES WILL DRAMATICALLY CHANGE THE LAW, RISKING NEW LOOPHOLES

We are concerned that the Proposed Rules, by shifting firearms and ammunition from the United States Munitions List (USML) to the Commerce Control List (CCL), would weaken oversight over exports of these items. As even the NRA has acknowledged, “items on the USML controlled under ITAR are generally treated more strictly,” whereas regulation under the CCL “is more flexible.” The NRA has also admitted that license applications for items on the USML are subject to “more stringent vetting” than items on the CCL.²

The Departments of State and Commerce, in drafting the Proposed Rules, have made some efforts to ensure that exports of firearms and ammunition will still be subject to oversight. But the dramatic nature of the proposed changes, and the complexity of the Proposed Rules raise serious concerns about hidden loopholes. Some areas of potential concern include:

- Congressional notification and the methods for Congress to disapprove of proposed firearm exports;
- The extent to which the Commerce Department monitors the end-users of its products; and the extent to which Congress and the public have access to information about the results of this monitoring;
- The online posting of designs for the production of firearms, and their use in the 3D printing of untraceable firearms;
- Firearms training provided to foreign security forces;
- The reporting of political contributions by gun exporters and related entities;
- The Commerce Department’s bandwidth to properly oversee these exports; and
- The regulation of brokers who act as middlemen in firearms transactions, and the threat that firearms will be diverted by these middlemen to violent ends.

¹ National Rifle Association, *Trump Administration’s Proposed Rulemakings a Win-Win for America’s Firearms Industry*, *National Security*, <https://www.nra.org/articles/20180525/trump-administration-s-proposed-rulemakings-a-win-win-for-americas-firearms-industry-national-security>

² Ibid.

According to the State Department's Proposed Rules, "The Department of Commerce estimates that 4,000 of the 10,000 licenses that were required by the [State] Department will be eligible for license exceptions or otherwise not require a separate license under the EAR." This statement seems to directly contradict the statement in the Commerce Department's Proposed Rules that "BIS would require licenses to export, or reexport to any country a firearm or other weapon currently on the USML that would be added to the CCL by the proposed rule." The Commerce Department later clarifies, "The other 4,000 applicants may use license exceptions under the EAR or the "no license required" designation, so these applicants would not be required to submit license applications under the EAR." While we recognize that other forms of oversight may be available, this dramatic difference in the number of licenses raises our concern.

We are also particularly concerned that these changes will result in an increase in the number of untraceable firearms in circulation. As 3D printing technology becomes more widely available, the likelihood that it may be used to construct operable firearms that are exempt from serialization requirements increases. Under current law, the proliferation of 3D printed firearms is held in check by the Fifth Circuit's decision in *Defense Distributed v. U.S. Dep't of State*,³ which upheld the State Department's decision that the posting of online data for the 3D printing of firearms fell within the USML. The Proposed Rules would throw that determination into question.

Inadequate gun safety laws cost human lives. When gun purchasers are not properly vetted and laws against gun trafficking are not properly enforced, guns often fall into the wrong hands and are used to perpetrate horrendous crimes and violence. The U.S. experiences this loss of life on a daily basis, with over 90 people killed each day. We do not wish to see a similar effect on an international level from the weakening of our laws regarding gun exports.

THIS CHANGE LACKS SUFFICIENT CONGRESSIONAL NOTIFICATION REQUIREMENTS

We have not seen anything in the Proposed Rules that would continue Congressional notification requirements for any of the Category I firearms that are being moved to the CCL. There are several types of sales controlled under the Arms Export Control Act that require Congressional notification. Under current law, a certification must be provided to Congress prior to the granting of any license or other approval for transactions involving the export of a firearm controlled under Category I of the USML in an amount of \$1 million or more.⁴ Congress then has the ability to enact a joint resolution prohibiting the export, which would prevent the State Department from licensing the sale. Congress generally is given 15 days or 30 days to review the transaction before a license can be granted, depending on the items being exported and the

³ 838 F.3d 451 (5th Cir. 2016).

⁴ See 22 U.S.C. § 2776, 22 C.F.R. 123.15(a)(3).

country to which it is being exported. While there are Congressional notification requirements for certain products that are controlled under the CCL, it seems that such notification requirements would not be as broad that as under the USML.

Congress should continue to receive advance notification of transactions involving firearms and to have the opportunity to prohibit these exports when appropriate. The Proposed Rules should be strengthened to protect Congress's authority in this area.

THE CHANGE MAY RESULT IN LESS TRANSPARENT END-USE MONITORING

We are concerned about a possible reduction in the monitoring of the end-users of exported firearms and publicly available information about this monitoring. The State Department currently monitors the end-users of firearm exports through its Blue Lantern program. Public reporting of Blue Lantern information is mandatory⁵ and there are readily available statistics about the results. While the Commerce Department also conducts end use monitoring, there does not appear to be as fulsome a public reporting requirement for these end use checks as under the Blue Lantern program.

The Proposed Rules do not discuss end use monitoring of the items being moved to the CCL. It is reasonable to assume that these items will fall under the general Bureau of Industry and Security end use check program. This end use check program is not as well-publicized or as formal as the Blue Lantern program, and only a very small percentage of exported items are reviewed. If the Proposed Rules move forward, this program must be strengthened to address the need to monitor the end-users of exported firearms and provide the public with information about the results.

THIS CHANGE IGNORES THE MILITARY NATURE OF MANY FIREARMS

The Proposed Rules are based on an assumption that automatic firearms are designed for and used by the military, and semiautomatic firearms are not "inherently military." This is inaccurate. Consequently, we question the President's determination that semiautomatic firearms and ammunition no longer warrant control under the USML.

In fact, members of the U.S. armed forces routinely use firearms in semiautomatic mode in combat conditions, and the designs of many semiautomatic firearms are inherently military. Assault rifles like the AR-15 were originally designed for military use. Earlier models included a selective fire option that allowed service members to switch easily between automatic and semiautomatic modes. The military included the option to fire in semiautomatic mode because military combat sometimes requires use of a firearm in

⁵ 22 U.S.C. §§ 2785, 2394, 2394-1a

semiautomatic mode. Shooting in semiautomatic mode is more accurate and hence more lethal.⁶ In fact, some members of the military use the semiautomatic mode exclusively.

The fact that some gun enthusiasts “enjoy” shooting these weapons and have labeled this activity “modern sport shooting” or “tactical shooting” does not change the design or purpose of these firearms or the danger they pose in civilian hands. The horrendous rise in mass shootings our country has suffered and the frequency with which these firearms are used in these shootings testify to this danger.

Military-style semiautomatic firearms were used to perpetrate the tragedies that occurred in an elementary school in Newtown, Connecticut, at a music festival in Las Vegas, Nevada, at a workplace in San Bernardino, California, in a movie theatre in Aurora, Colorado, and at a high school in Parkland, Florida, among others. Because of the dangerous nature of these weapons, D.C. and seven states, including the populous states of California and New York, ban them.⁷ Because of the military nature and serious lethality of these weapons; they belong on the USML.

THERE ARE ALTERNATIVES TO THE PROPOSED RULES THAT HAVE NOT BEEN EXPLORED

The real concern that seems to be driving this significant change in the way the U.S. government regulates firearms exports is that firearms and ammunition manufacturers are currently required to register with the State Department and pay a registration fee. According to the NRA, “Any business that manufactures an item on the USML, or even just a part or component of such an item, also has to register with the State Department and pay an annual fee, which is currently set at \$2,250. This registration is required even if the manufacturer has no intent to ever export the items. ... Manufacturers of items on the CCL, or their parts or components, do not have to pay an annual registration fee to the Commerce Department.”⁸

The registration fee appears to be the NRA’s primary concern with the current system for regulating the export of firearms and ammunition. The simple solution to this problem might be to waive the fee for manufacturers who do not, in reality, export these items. Waiving the fee would relieve industry of this “burden” without undoing the important policy choices made by the State Department in the regulation of these exports or requiring the Commerce Department to “reinvent the wheel” with respect to these regulations. While we would not necessarily support this proposal (it might shift the costs of manufacturer

Thank you to Mom's Rising for the following information and why I am against the rule change:

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I oppose the proposed rule for the following reasons. The proposed rule change:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

It's bad enough that our own children can't go to school without fear of being shot -- now we're trying to endanger the rest of the world for profit for the rich? Not to mention all the talk about fighting crime and drugs and now the Trump regime is attempting to make it easier for both to flourish throughout the world.

Stop this nonsense!

General Comment

To Whom It May Concern:

At a time of instability in many areas of the world, this is a time to hold fast to the oversight role and responsibilities of the US State Dept. with regards to export of firearms. On May 24th President Trump proposed a new rule that would move this responsibility to the US Dept. of Commerce. This has potential negative consequences for our national security, international crime and terrorist threats. I strongly oppose any effort to move the monitoring of firearm exports from the State to the Commerce Dept. I further oppose any loosening of regulations of firearm exports as it would increase the risk of guns falling into the hands of terrorists and rogue nations.

Respectfully submitted,

Jeannine M. Coyne

The Trump administration's changes to gun regulations and its alignment with the NRA and gun manufacturers is disgusting. I oppose the rule change that would switch the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

We need to be a leader in the area of gun safety and set an example of how to use guns responsibly. Moving the oversight

to the Commerce Department indicates we as Americans just makes it seem that guns are merely a commodity for profit

instead of a product that we must use and make available to others to use judiciously, only for reasonable and necessary purposes. Please do not permit this change.

I am Kathleen K Paty and have traveled with my father to Japan and my husband to Morocco. One of my sons stood at the DMZ in Korea and the other watched the border between Egypt and Israel. I am a voter and have been for years. I support the second amendment but this is not a constitutional issue.

This rule change will make it possible for violent gangs to purchase, made in the USA, firepower, It is possible, even likely, our failure to control sales of weapons for the gangs to take over Mexico and threaten our southern border. We do not need to be stupid!

Attachments

Wepon Export

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as “non-military.” But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress’ proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government — i.e., taxpayers — will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]
5. The rule reduces end-use controls for gun exports. It would eliminate the State Department’s Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Government’s information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter’s history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

6. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.
7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.
8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.
9. This rule would transfer gun export licensing to an agency – the Commerce Department – whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.
10. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

General Comment

As the owner of a small gunsmithing operation in rural SC I urge you to transfer control of small firearms and ammunition from the State Department to the Commerce Department. It is imperative to my business that we roll-back the horrible rules that you updated in July, 2016. Effective 22 July 2016, gunsmiths suddenly found themselves subject to the regulatory authority of the Arms Export Control Act (AECA) as administered by the State Departments Directorate of Defense Trade Controls (DDTC). Regulators suddenly determined that traditionally routine gun repair and enhancement services now constitute firearms "manufacturing" and mandatory registration of my small, home-based business under International Traffic in Arms Regulations (ITAR). Tis ITAR directive advises gunsmiths to stop what they are doing and pay up or face fines and prison! (Violations under the ITAR can bring civil penalties of \$500,000 per violation and criminal penalties of up to \$1 million per violation along with up to 20 years in prison).

These rules are terribly confusing. I submitted some very direct questions to you and have never received a reply. I developed a list of typical customer service requests that raise concern with respect to ITAR registration. Specifically, I requested your determination on these examples:

- 1) Drilling, threading and installing sling swivels on rifle forend (and buttstock) for sling and/or bipod (requires drill press and screw threading)
- 2) Fabricating replacement parts - such as firing pins for rifles and pistols (requires lathe turning, milling, grinding, and polishing)
- 3) Installation of Cominolli safety special option on Glock pistols (requires cutting of frame slot with Foredom tool and fixture)
- 4) Rifle barrel setback - to correct headspace and service misfire issues (requires lathe and chambering reamer)
- 5) Slide and frame milling and cuts adding cocking serrations for improved handling, chamfering and dehorning for concealed carry, and enhanced eye appeal (requires mill, surface grinder)
- 6) Installation of gunsmith fit barrel - for accuracy upgrade or to address headspace issues (requires milling and/or TIG welding of hood and foot to precise fit)
- 7) Installation of scope mount on early rifles - for hunting, competitive shooting, and sporterizing

(requires drilling and tapping of mounting holes)

8) Re-crowning barrel - to improve or repair rifle accuracy (using lathe)

9) Installing 1911 Beavertail - to improve comfort and aim (requires precision cutting of frame, typically with mill)

10) Installing Sako-style extractor on Remington Model 700 rifle - primarily for improved reliability (requires milling and drilling of rifle bolt)

The above are, I think, a typical sampling of services that might reasonably be encountered in any gunsmith practice. Under State Department export control rulings all the above would likely constitute manufacturing and are illegal under ITAR absent payment of a large export fee. I urge you to transfer administration over to the Department of Commerce.

Obviously, the ITAR fee is a significant burden on a small gunsmith shop and will be an important factor in determining the viability and directions of my planned endeavor. I am hopeful that you will properly transfer administration and governance to the Commerce Department.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

General Comment

I am a former Los Angeles County Deputy District Attorney and a lawyer who has practiced law for over 30 years and represented local governments seeking to address gun violence in their jurisdictions. I serve on the American Bar Association's Standing Committee on Gun Violence and in that capacity have worked on nationwide gun violence prevention issues. I am opposed to the proposed rule changes because both individually and collectively they greatly increase the risk of illegal firearms trafficking in this country and abroad. Small arms are already trafficked at an alarming rate into embargoed countries and into countries where they are used in conflicts in which children have been forced to be soldiers. (1) The proposed Treatment of semi-automatic assault rifles as "non-military" despite their use by U.S. troops and their use in non state and state armed conflicts, their easy conversion to fully automatic firearms, and their prohibition under the laws of many U.S. states and other countries, is contrary to the statutory framework enacted by Congress to regulate export of firearms. (2) The proposed rule would eliminate Congressional oversight for important firearms export deals and removal of Congressional oversight is directly contrary to the congressional intent of the statutes the proposed rule is meant to implement. (3) The proposed rule changes would relieve gun manufacturers of the cost of processing their licenses and imposed on taxpayer. (4) The proposed rule changes moving many approval functions out of the State Department to Commerce reduces control over firearms exports by eliminating the State Department's Blue Lantern program and the oversight that the State Department has been able to effect in denying licenses to international human rights violators through the registration system and its database. (5) The proposed rule changes enable unchecked firearms production in the U.S. and exports by removing the block on 3d printing. (6) The proposed rule changes transfer firearms export regulation to Commerce whose primary mission is to promote trade, which is contrary to congressional intent with respect to the statutes governing export of firearms. Firearms are used to kill thousands of people every year in acts of organized crime, drug trafficking, and human rights violations. We need more controls over the export of these weapons, not less.

Name: Russell Paty

General Comment

I am Russell Paty and have traveled around the world three times. One of my sons stood at the DMZ in Korea and the other watched the border between Egypt and Israel. I am a voter and have been for years. I support the second amendment but this is not a constitutional issue.

This rule change will make it possible for violent gangs to purchase, made in the USA, firepower, It is possible, even likely, our failure to control sales weapons for the gangs to take over Mexico and threaten our southern border.

I oppose the proposed rule

Attachments

Weapon Export

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as “non-military.” But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress’ proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government — i.e., taxpayers — will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3]
5. The rule reduces end-use controls for gun exports. It would eliminate the State Department’s Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Government’s information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter’s history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

6. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.
7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.
8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.
9. This rule would transfer gun export licensing to an agency – the Commerce Department – whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.
10. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I am a retired teacher who had to go through numerous lock-down drills with my students. How horrible that students and teachers now must be afraid for their safety due to the accessibility of firearms. This never occurred when I was a child, nor when my children were young. It started in the mid-90's and it has only grown worse. It is appalling.

General Comment

I am an individual who happens to work for a USML I firearms manufacturer, & am one of the principal members of its Compliance Department. I am not authorized to speak on behalf of my company, but will comment as an individual who has had "direct contact" with the ITAR, 7 days a week for the past 6 years.

In the years that I have interfaced with the firearms licensing unit of the DDTC for my applications, I have had relatively few problems and have been witness to some amendments which have resulted in positive changes. In terms of the everyday reality of working within this system, the ability to track the status of licenses in ELISA and if need be communicate directly with the licensing agent assigned to the application has been a productive process. I have also learned a great deal from working with the personnel of the DDTC unit charged with handling Category I firearms and accessories applications. The unit has proven to be both knowledgeable and helpful in achieving my licensing goals. Other than the occasional EAR99 shipment, my involvement with the BIS regulations has been minimal and I have yet to utilize the SNAP-R system, so I cannot directly judge exactly what real improvements would result from this migration, if any. The devil you know is often preferable to the one you don't.

Given that the licensing process under this proposed migration from DDTC to Commerce will still involve inter-agency review and the same staffing out to DOD and State Dept. Agencies, I don't see a clear indication of improvement, especially not in terms of processing times. This change represents a shift from one entity receiving an application to another. (Yes, we will save a few thousand dollars in registration fees.) The metric cited of 43.8 minutes for a BIS application vs. 60 minutes for DDTC application and the extrapolations of that metric to conclude a result of major savings fails to capture the true cost of the existing process or any nuances of how the process actually works. It certainly does not address the substantial burden created by the proposed the data capture for AES filing which will be amended to include make, model, and serial number.

The migration of non and semi-automatic firearms from USML I to BIS 0A501 will also initially create a substantial burden in terms of time and money for reclassifying product, retraining personal and revising all the SOPs associated with our exporting processes. I am not seeing a demonstrated case of either paperwork reduction or person-hour savings. Complicating the AES process at the end of the exporting chain is going to increase burdens for companies and place more burden on an already overloaded CBP. I do see areas where relief could and should be granted. While the change from the fee-based registration

and licensing structure of State to the no-fee structure of Commerce, will provide much needed relief for smaller companies, I have to believe that simply changing the definition of a manufacturer by including a minimum size requirement for registration could easily produce the same result and reduce the number of small businesses which are currently being caught in the net of the existing manufacturing definition and its fees which they cannot easily afford.

Also, major improvement could be easily achieved by raising value of the exemption in 123.17(a) from \$100 to \$500. While the proposed changes within LVS do increase this amount, they then reduce it by shifting the definition of value from wholesale to selling price, thus giving with one hand while taking away with the other. Permitting the export of receivers and breech mechanisms could be achieved by simply amending the "Canadian Exemption" within the ITAR. Also helpful, would be an increase in wholesale value from \$500 to \$1000 for Canada. The proposed LVS change with its "selling price" definition is not genuine relief.

I appreciate the reduced controls on technical data and the elimination of the concept of defense services which would be achieved by the migration, but given that there has been relatively little substantive change in basic firearms technology over the decades, a simple amendment to or exemption from the existing controls for firearms technology within the ITAR could likely achieve the same result without having to totally move to a new process. (I have watched competitors place manuals online-which we believe to be in violation of ITAR regulations-without repercussion.) A change in this area would level the playing field and eliminate an unfair competitive advantage and also improve our ability to market and repair firearms. Likely this type of improvement could be achieved without a major overhaul of the entire system.

In conclusion, speaking as someone who deals with ITAR functionality, I am quite certain positive relief could be achieved by judicious and minimal amendment to what already exists as opposed to a major overhaul which is certain to create a messy transition.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. I am concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. I am also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

We support the Export Control Reform Initiative reforms that have been implemented to date. These changes have rationalized and streamlined a cumbersome and opaque U.S. Munitions List (USML) in ways that make it more useful for American exporters and make non-militarily-sensitive exports easier to process and more competitive internationally.

However, the Department of State has published draft regulations that would remove small arms, light weapons, and associated equipment and ammunition from Categories I, II, and III of the International Trafficking in Arms Regulations, to be subject instead to the Commerce Control List (CCL) of the Department of Commerce. This will result in less rigorous oversight of the export of these deadly weapons.

Small arms and associated ammunition are uniquely lethal; they are easily spread and easily modified, and are the primary means of injury, death, and destruction in civil and military conflicts throughout the world. As such, they should be subject to more not less rigorous export controls and oversight. We strongly oppose any changes to Categories I, II, and III that do not adequately reflect the life-and-death impact such changes will have, including by maintaining congressional oversight over these sales before export. Specifically, combat rifles, including those commonly known as sniper rifles should not be removed from the USML, nor should rifles of any type that are U.S. military-standard 5.56 (and especially .50) caliber. Semi-automatic firearms should also not be removed, and neither should related equipment or ammunition or associated manufacturing equipment, technology, or technical data.

The Arms Export Control Act (AECA) enables congressional review of exports of these articles to ensure that they comport with U.S. foreign policy goals and values. Congress took action in 2002 to ensure that the sale and export of these weapons would receive close scrutiny and oversight, including by amending the AECA to set a lower reporting threshold (from \$14 million to \$1 million) specifically for firearms on the USML. Moving such firearms from the USML to the CCL, as is being proposed, would be directly contrary to congressional intent, made clear in 2002, and would effectively eliminate congressional oversight of exports of these weapons.

Congressional oversight has proven important on multiple occasions. Over the last several years, the Executive branch has considered and proposed sales to countries and foreign entities that have engaged in human rights abuses and atrocities. In May 2017, for example, the Administration sought to sell semi-automatic pistols to the bodyguard unit of President Erdogan of Turkey, despite the fact that members of that unit had viciously attacked peaceful protestors near the Turkish Embassy in Washington, DC. The sale was only halted because congressional notification was required by law. In addition to the proposed Turkey sale, State proposed the export of 27,000 automatic rifles to the Philippine National Police in August 2016, some members of which have been credibly alleged to have committed extrajudicial killings as part of President Duterte so-called war on drugs, which has targeted mostly low-level drug users.

The Departments of State and Commerce have noted that State will still review the sales for human rights concerns if licensing is moved to the CCL. However, as demonstrated by the above examples, State has at times fallen short of its responsibility to prioritize such concerns in its consideration of such sales. Therefore, while we oppose this transfer of licensing authority to the Department of Commerce, we will also seek to ensure that congressional oversight is maintained if the proposal is implemented.

General Comment

Transferring the regulation of exporting firearms to the Commerce Depart makes the sale of firearms about money rather than safety. History has shown time and again that US exported firearms will be used against US citizens here and abroad.

Here are some of the many reasons rational people are opposed to this change:

- *Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- *Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- *Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- *Eliminates Congressional oversight for important gun export deals.
- *Removes statutory license requirements for brokers, increasing risk of trafficking.
- *Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- *The Commerce Department does not have the resources to enforce export controls.
- *Reduces transparency and reporting on gun exports.
- *Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

The State Department is the appropriate agency to regulate the exporting of firearms. The Commerce Depart is not.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

Greetings from Cincinnati, Ohio

I am James A. Myres, I served in the U.S. Coast Guard (1966-70), I am currently 73 years old and I am a Franciscan. I can not understand how you can consider transferring control of the export of firearms to the Department of Commerces Bureau of Industry and Security. This will directly put members of the U.S. military in harms way and will put U.S. citizens traveling abroad in harms way. Our own gun manufacturers will be killing U.S. citizens.

Firearms are used to kill a thousand people every day around the world, this policy will just make it easier for the "bad guys" to get their hands on weapons that rival what our military uses. This may create hundreds of jobs but at what cost?

Military firearms are specifically useful in acts of organized crime, political violence, terrorism, and human rights violations. We can certainly supply these weapons but is it the right thing to do? I personally do not think it is. We would be better off as individuals and as a country supporting the middle class in third world countries, not corrupt ruling classes or lawless gangs operating in the name of the governments.

The types of weapons being transferred to Commerce control, including military-style assault rifles and their ammunition, these are weapons of choice for criminal organizations in Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. These weapons and the violence they bring are driving our immigration crisis.

The export of these weapons should be subject to more controls, not less.

Peace

Jim Myres, OFS

I am against the proposed rule change to make it easier for U.S. gun manufacturers and dealers to export guns and ammunition globally. This rule would basically be helping to arm those who want to do Americans harm; exported guns and ammunition will almost certainly fall into the hands of terrorist groups, criminal organizations, human rights abusers, and other dangerous groups. Given world events, how can we even consider shipping more arms abroad? The profit gains for American gun and ammunition manufacturers is simply not worth the risk.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

It is dangerous and foolhardy to treat weapons as simple commodities to be sold on the open market. Do we really want to arm any faction that can pay? This proposal is based rooted in greed and eliminates sound policy assessment. While 3D printing of firearms may not be preventable in the long run, it is wantonly careless to enable it. Nothing in this proposed rule change reflects sound judgement.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department. The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world. General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit the retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively

condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

General Comment

I am opposed to loosening regulations related to the export of firearms. This is so dangerous, who could be for this, except those who are in the gun manufacturing industry and others who stand to make money from it? Given our national security concerns and in this age of international terrorism, loosening regulations on the export and sale of firearms is just about the worst thing we could do. This measure could potentially increase the chance of dangerous weapons ending up in the hands of international criminals. I do not think this proposal adequately addresses our interests with regards to national security, foreign policy, international crime and terrorist threats. The administration should NOT move forward with this reckless proposal.

General Comment

I am writing to oppose the proposed rule that would shift the responsibility of monitoring exports and import of firearms and ammunition from the State Department to the Department of Commerce. The shift would change a lot of current programs and make it far easier for weapons to be exported and divert to areas of conflict throughout the world. The State Department has a mission to reduce arms trafficking and promote peace and has successfully been doing this for years. The Commerce Department is by its name interested in increasing commerce. That is important but not in the area of providing more firearms, including semi-automatic weapons, to countries where they can be easily diverted into areas of conflict.

For instance, taking this monitoring out of the State Department would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. And It would remove licensing requirements for brokers, increasing the risk of trafficking.

It might also have an adverse effect on controlling the 3D printing of firearms. Why would we want to make it easier for gun traffickers and terrorist to get weapons. For the safety of our armed forces and our citizens we should keep the monitoring of exports/imports and of weapons brokers in the Department of State.

I oppose moving export license oversight for firearms from the State Department to the Commerce Department.

The proposed rule change eliminates necessary Congressional oversight for gun export deals; places the cost of processing licenses on the U.S. taxpayers; enables 3D printing of firearms; and allows weapons of war to more easily proliferate throughout the world.

The rule change increases the profits to the American gun industry while the entire world pays the cost in lives.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would allow firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

The State Departments Blue Lantern program would be eliminated, which has been in effect since 1940. The Blue Lantern programs carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. If Commerce were responsible for exporting of firearms, then public would likely not know any information about these firearms -- what firearms are going to which countries, regimes, etc. Licencing requirements would be removed for brokers increasing the risk of trafficking -- again what firearms to which countries/regimes.

Another issue is that 3D printing of firearms would be allowed, enabling 3D printing of firearms in the US and around the world.

If firearms regulations remain with the State Department, then Congress can oversee their sales, block sales of large batches of firearms to foreign countries. Congress would not be automatically informed about weapons sales, could not stop exports for national security concerns or to countries where there are serious human rights concerns.

The world would be a more dangerous place if Commerce were to have oversight of firearm exports.

Firearms are a matter of security not of commerce. Let the state department handle matters of security and the sales of firearms rather than transferring that oversight to commerce.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

For the following reasons I strongly protest the following provisions of The U.S. Department of State (DOS) Proposed Rule: International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III : This proposal

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

I object to the proposed changes in the International Traffic in Arms Regulations: U.S. Munitions List, Categories I, II, and III because I believe it will be more dangerous for our troops, U.S. Border Patrol and our Coast Guard. I want to know what the Defense Department thinks of taking regulation of these currently tightly restricted weapons sales and licensing of dealers away from the State Department and transferring this responsibility to the Commerce Department whose main goal is to making it easier to trade in these lethal weapons. For example, we now have troops in every country in Africa. We are fighting nonstate groups, paramilitary forces, terrorist organizations, and individuals waging war on the citizens and government security forces in Africa now. In Mexico, Central and Latin America, refugees are fleeing violence and terror from rich and powerful Narco groups and corrupt police and ineffectual governments. What do our neighbor countries and allies think of the changes will put more weapons into the hands of thugs and despots internationally? Permanent wars are profitable for arms dealers. I now understand what was at stake in keeping assault rifles and high capacity magazines available for sale in the U.S. Domestic market.. they can now be classified as nonmilitary and trafficked internationally. That is the payback for the \$30,000,000 investment in the 2016 election. I do not agree that profits for arms dealers supersede the security of our own children, citizens and security forces. I will continue to stand up for the lives of my grandchildren and to build a better future for them as citizens of this country and the world.

Organization: BORDERVIEW International Firearm Logistics

General Comment

BORDERVIEW appreciates the opportunity to comment on the long-awaited transition of firearms and related items from the jurisdiction of the Department of State to the Department of Commerce. We have closely followed the efforts since the early days of the Obama administration to complete this phase of Export Control Reform, and applaud the publishing of these proposed rules.

Broadly speaking, we are very supportive of the proposal and would like to underscore the well-laid justifications made in your proposed rule, and the companion Department of Commerce proposed rule, in addition to the 'Myths vs. Facts' release posted on your website. BORDERVIEW looks forward to your publishing of the Final Rule and completion of these longstanding and bipartisan efforts to simplify our nation's export control infrastructure to better control the most military-sensitive items, while maintaining appropriate controls on Dual Use items such as firearms.

We submitted a detailed comment letter to the U.S. Department of Commerce as their proposed rules would cover a supermajority of our sporting firearm export activity going forward. Nonetheless, we offer here our affirmation of the broad transition affected by these companion rules. Furthermore, we encourage a split effective date where a delayed effective date of 180 days is given so larger companies can align IT systems, etc, and an immediate effective date is allowed for smaller companies or those prepared to make the immediate shift to the EAR. This would directly impact smaller companies and especially those non-exporting companies such as gunsmiths required to register under the ITAR, who may be facing costly renewals during an extended delayed effective period. While not standard practice, there is precedent in the July 2014 notice of FR 79 37535, which gave two effective dates for that Final Rule.

Regardless of the effective date published in the Final Rule, we respectfully request that DDTC and BIS complete their review of comments and publish a Final Rule as soon as is reasonably possible. Given the long-awaited nature of these rules, prompt publishing of the Final Rule after appropriate review and consideration of all relevant comments by impacted parties would be greatly appreciated and beneficial to both industry and government.

The justification provided is clear and absolutely sensible. This is not a de-controlling as some are wrongly asserting. Regardless of recent politicization by some in Congress and the media, this has truly been an historic bipartisan effort over many years, starting in the earliest days of the Obama administration and now coming to fruition under the current administration.

Thank you for your consideration and we look forward to review of the final rule.

I strongly urge the State Department to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. With gun violence killing one thousand people around the world every day, we certainly should be making it harder, not easier, to export U.S. made weapons of war.

I oppose this proposed rule that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Moving the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

General Comment

Dear U.S. Department of State,

I am a U.S. Citizen and oppose the transfer of gun exports to the Commerce Department.

This transfers the cost of license processing to taxpayers and removes statutory license requirements for brokers, increasing The risk of trafficking and decreasing the tracking of mass weapon accumulation.

This reduces or eliminates end-use controls, such as State Department's Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since 1940's.

This says semi-automatic weapons are not military weapons yet these are the weapons used by military around the world and are used in massive world conflicts that harm millions of people.

The Commerce Department does not have the resources nor expertise to enforce export controls, even now. They will not be able to enforce tracking necessary for mass weapon sales.

This reduces the transparency and reporting on gun exports.

This transfers gun export licensing from agency with a mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade and profit.

This is not a move in the best interest of U.S. safety and citizens. It is in the interest of gun manufacturers whose mission is to boost sales at the risk of lives and stability.

Congress of the United States
House of Representatives
Washington, DC 20515

July 5th, 2018

Secretary Mike Pompeo
Department of State
2201 C Street NW
Washington, DC 20230

Secretary Wilbur Ross
Department of Commerce
1401 Constitution Avenue NW
Washington, DC 20520

Dear Secretaries Pompeo and Ross:

We write to express our deep concern about proposed regulatory changes that would transfer control and licensing of exports of semi-automatic assault weapons, high capacity ammunition magazines and related military items from the Department of State to the Department of Commerce. We urge you to postpone implementation of these proposed changes until important issues can be addressed.

Under the current regulatory framework established under the Arms Export Control Act, export of items that are primarily for military use are regulated pursuant to the International Traffic in Arms Regulations administered by the State Department. Such items are included on United States Munitions List and are subject to stringent controls that are aimed at restricting access to military items to approved foreign governments. Exporters must be registered with the State Department and end-users are monitored under the Blue Lantern program, which provides inventory management control and accountability of all commercial arms sales and transfers. Transferring regulation of such military exports to the Department of Commerce would make it more likely that U.S.-origin weapons will end up in the hands of traffickers, terrorists, and cartels, and put them into global commerce.

We are also concerned that proposed rule changes will significantly reduce Congressional oversight and undermine efforts to prevent and prosecute firearms trafficking. Specifically, current regulations require Congressional notification of an intended commercial firearms sale in excess of \$1 million. By contrast, licenses issued by the Commerce Department are not notified to the Congress, or subject to prior review. In addition, the Foreign Assistance Act also prohibits sale of such defense articles to countries where governments have engaged in a consistent pattern of gross violations of internationally recognized human rights.

The volume of U.S. military small arms exports, which is already substantial, is certain to increase if regulation is moved to the Commerce Department. In the past year alone, Congress has

been notified of some \$660 million of firearms sales regulated under the United States Munitions List

The ramifications of the proposed transfer of oversight from the State Department to the Commerce Department are very serious: arms manufacturers and brokers of semi-automatic assault weapons will no longer be required to register with the State Department; training on the use of these items will no longer require a license, allowing private security contractors to train foreign militias in sensitive combat techniques without proper vetting; prosecutors will have less documentary evidence to prosecute arms dealers; and elected officials will have less say in the export of dangerous weapons.

For all these reasons, we urge you to postpone the proposed regulatory transfer until these important issues can be addressed.

The Honorable Michael Pompeo
 Secretary of State
 U.S. Department of State
 2201 C Street NW
 Washington, DC 20520

LEGISLATIVE AFFAIRS

2018 JUL 26 A 7:46

RECEIVED

Dear Secretary Pompeo:

The Department of State is about to permit the public, worldwide release of dangerous information on the 3D printing of functional firearms that are undetectable by standard security measures. Such a release would allow any foreign or domestic person, including arms traffickers, terrorists, transnational criminals, and domestic abusers to effectively "download" a gun, making it much easier to evade security measures and obtain a weapon. This decision is not only alarming and irresponsible, but one that appears to evade statutory requirements and skirts an ongoing regulatory review process.

Recently, the Department settled a lawsuit by a U.S. firm seeking to post blueprints and other information on the Internet that would allow anyone with a 3D printer to create plastic firearms. Based on reports of the terms of the settlement, the Department has now agreed that the information can be exempt from the export licensing requirements of the International Trafficking in Arms Regulations (ITAR). Even more troubling, the Department also agreed to temporarily suspend the relevant ITAR restrictions to allow this otherwise prohibited dissemination.

Yet this "temporary" suspension will effectively allow a permanent and continuing export. Once posted on the Internet, these files will be shared, downloaded, and used to create firearms. As such, this action is tantamount to a permanent removal of an item from the United States Munitions List, but without the 30-day notice to the Senate Foreign Relations Committee and House Foreign Affairs Committee as required by the Arms Export Control Act.

It is hard to see how making it easier for criminal and terrorist organizations to obtain untraceable weapons is in the foreign policy and national security interests of the United States. This action by the State Department makes the work of U.S. and international law enforcement and counter-terrorism agencies—and the U.S. Transportation Security Agency—all the more difficult and heightens the risk to innocent Americans and others from terrorist and extremist attacks. Moreover, the domestic risk cannot be understated, especially with the high rates of gun violence in our schools, churches, clubs and public gathering places. The release of these blueprints permits anyone, even those banned from gun ownership due to a criminal

LMD/TB

conviction, to build their own gun. These "ghost guns" also pose a problem for law enforcement as such firearms lack a serial number and are thus untraceable.

Given the far-reaching and dangerous consequences of this decision, I urge you to immediately review and reconsider the Department's position, and to ensure that this and any other decision regarding arms export control complies fully with the letter and spirit of the Arms Export Control Act. Further, any release should not occur until the Department, Congress, and the public have ample time to review the consequences of this action.

Sincerely,

A handwritten signature in black ink, reading "Robert Menendez". The signature is fluid and cursive, with a large, stylized "R" and "M".

Robert Menendez

RECEIVED
2018 JUL 27 A 11:46
LEGISLATIVE AFFAIRS

Dear Secretary Pompeo:

We write with great alarm regarding the decision last month by the Department of Justice (DOJ) to settle the lawsuit brought against the State Department by the gun rights advocacy groups Defense Distributed and the Second Amendment Foundation. We urge the State Department not to allow Defense Distributed to publish online blueprints for undetectable, three-dimensional ("3-D") printable firearms.

In 2015, Defense Distributed and the Second Amendment Foundation sued the State Department, challenging the State Department's determination that Defense Distributed violated federal export controls and its demand that Defense Distributed remove from the internet its blueprints for 3-D printable firearms. Throughout the course of the lawsuit, the government maintained that its position was well-supported under the Arms Export Control Act and the International Traffic in Arms Regulations (ITAR). Indeed, as recently as April 2018, the Trump administration filed a motion to dismiss the suit in which it argued that "[w]hatever informational value there may be in the process by which 3-D printing occurs," Defense Distributed's Computer Aided Design files "are indispensable to a [3-D] printing process used to create firearms and their components," and "are also functional, directly facilitate the manufacture of weapons, and may properly be regulated for export."¹

Despite the court's twice siding with the government's position, in a stunning reversal of course last month, DOJ settled the suit and agreed to allow for the public release of Defense Distributed's 3-D firearm printing blueprints in any form. Specifically, the State Department has agreed to allow Defense Distributed to publish its blueprints by July 27, 2018 — by making a "temporary modification" of the United States Munitions List (USML) and granting Defense Distributed an "exemption" from ITAR regulations. The administration also made the puzzling decision to pay nearly \$40,000 in legal fees to the plaintiffs using taxpayer dollars.

This settlement is inconsistent with the administration's previous position and is as dangerous as it is confounding. The settlement will allow these blueprints to be posted online for unlimited distribution to anyone — including felons and terrorists — both here in the United States and

¹ *Defense Distributed v. U.S. Dep't of State*, Case 1:15-cv-00372-RP, Defs.' Mot. Dismiss Second Am. Compl., at 1 (W.D. Tex. Apr. 6, 2018).

CCM

Secretary Pompeo
Page 2 of 4

abroad. It also sets a dangerous precedent in defending against challenges to other legally sound determinations made by the State Department under the Arms Export Control Act and ITAR.

Yesterday, in response to questioning by Senator Markey before the Senate Foreign Relations Committee, you committed to reviewing the decision to allow Defense Distributed to publish its blueprints online. In accordance with this commitment, we ask that you suspend the special treatment given to Defense Distributed while you undertake this review.

In addition to suspending these actions, we ask that, prior to August 1, 2018, the State Department provide us with a written explanation and briefing on the reasoning behind the decision to settle this litigation in the manner it did. The American people have a right to know why their government agreed to such a dangerous outcome.

Specifically we request a response to the following questions:

1. Does the State Department no longer believe that the online publication of blueprints for the 3-D printing of firearms is a violation of federal export controls? If so, when did this reversal of opinion occur and why? Was there a change in the law or the facts that prompted this change? If so, please explain the change in either the law or facts that prompted the change.
2. On May 24, 2018, the State and Commerce Departments published proposed rules to amend Categories I, II, and III of the USML and transfer from the State Department to the Commerce Department oversight over export of certain firearms, ammunition, and related items. What role did the Defense Distributed litigation play in deciding to publish these proposed rules? What analysis, if any, did the State and Commerce Departments undertake to evaluate the potential risks of the proposed rules changes on export controls on the online publication of blueprints for 3-D printed firearms? If the State Department did evaluate the risks, what risks were identified? Please identify the individuals involved in that analysis.
3. If these proposed rules are finalized and jurisdiction over technical data related to the design, production, or use of semi-automatic or military-style firearms is transferred to the Commerce Department, the release into the public domain of instructions for printing 3-D firearms will be permissible. Does the State Department have concerns about the dangerous consequences of this rules change? Did the State Department make the Commerce Department aware of the litigation between it and Defense Distributed and the Second Amendment Foundation, the terms of the settlement, or the consequences of online publication of blueprints for 3-D printed firearms? If so, please identify to whom and how that information was conveyed.
4. Given the risks of the government abdicating control over the online publication of blueprints for 3-D printed firearms, why did the State Department agree to move forward with the rulemaking? How does the State Department plan to mitigate these risks?

Secretary Pompeo
Page 3 of 4

5. The settlement agreement resolving the lawsuit brought by Defense Distributed and the Second Amendment Foundation obligates the State Department to “draft and fully pursue . . . the publication in the Federal Register of a notice of proposed rulemaking and final rule, revising USML Category I to the technical data that is the subject of the” litigation. Why did the State Department agree to this relief?
6. The settlement agreement resolving the lawsuit brought by Defense Distributed and the Second Amendment Foundation obligates the State Department, “while the above-referenced final rule is in development,” to announce “a temporary modification, consistent with the International Traffic in Arms Regulations (ITAR), 22 C.F.R. § 126.2, of USML Category I to exclude the technical data that is the subject of the” litigation, and to publish the announcement on the website of the Directorate of Defense Trade Controls on or before July 27, 2018. Why did the State Department agree to this relief? What will this temporary modification likely entail? Will the State Department put any restrictions on the types of 3D technical data that can be released to the public without prior U.S. government approval, including types of firearms, 3D printing, and materials, among other possible issues? Why did the State Department fail to provide 30 days’ notice to the relevant congressional committees of its intention to remove Defense Distributed’s “technical data” from the USML, as required by 22 U.S.C. § 2278(f)(1)?
7. The settlement agreement resolving the lawsuit brought by Defense Distributed and the Second Amendment Foundation obligates the State Department to issue “a letter to Plaintiffs on or before July 27, 2018 signed by the Deputy Assistant Secretary for Defense Trade Controls, advising that [the 3-D printing files at issue in the litigation] are approved for public release (i.e., unlimited distribution) in any form and are exempt from the licensing requirements of ITAR because they satisfy the criteria of 22 C.F.R. § 125.4(b)(13).” Why did the State Department agree to this relief?
8. The settlement agreement resolving the lawsuit brought by Defense Distributed and the Second Amendment Foundation obligates the State Department to “acknowledg[e] and agree[] that the temporary modification of USML Category I permits any United States person . . . to access, discuss, use, reproduce, or otherwise benefit from the technical data that is the subject of the Action, and that the letter to Plaintiffs permits any such person to access, discuss, use, reproduce[,] or otherwise benefit from the” 3-D printing files at issue in the litigation. Why did the State Department agree to this relief?
9. The settlement agreement resolving the lawsuit brought by Defense Distributed and the Second Amendment Foundation obligates the State Department to pay the Plaintiffs \$39,581.00, reported to be for a portion of their legal fees. Please identify what funding source within the government this payment was drawn from. Additionally, please provide information regarding why the State Department agreed to this relief.

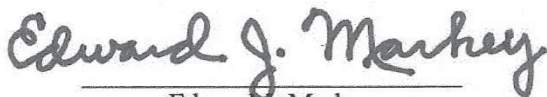

We are concerned about the immediate impact of publishing these 3-D gun blueprints: Once the State Department allows them to circulate freely online, the threats to U.S. and international security will be irreversibly increased. We urge you not to grant this special treatment to Defense

Secretary Pompeo
Page 4 of 4

Distributed — but rather to postpone this action while you fulfill your commitment to review this decision, and until the above questions can be adequately addressed.

Thank you for your prompt attention to this matter. Should you have any questions about this request, please contact Callan Bruzzone of Senator Markey's staff at 202-224-2742.

JOINT ECONOMIC COMMITTEE
SELECT COMMITTEE ON INTELLIGENCE

July 31, 2019

The Honorable Michael R. Pompeo
Secretary
U.S. Department of State
2201 C St NW
Washington, DC 20520

The Honorable Wilbur Ross
Secretary
U.S. Department of Commerce
1401 Constitution Ave NW
Washington, DC 20230

Dear Gentlemen,

I am writing regarding the transfer of export licensing authority for sporting and commercial firearms and ammunition products currently on Categories I, II, and III of the United States Munitions List (USML) from the Department of State – Directorate of Defense Trade Controls (DDTC) to the Department of Commerce – Bureau of Industry and Security (BIS) where the products would be controlled on the Commerce Control List (CCL) and the Export Administration Regulations (EAR). I urge you both publish the new rules for this transfer as soon as is practicable.

The export of Category I, II, or III items under the CCL process is extremely important to the domestic firearms and ammunition industry, primarily because it reduces the export approval timeline. The ability to rapidly reply to international business opportunities allows U.S. companies to remain competitive in the global market and creates high-quality manufacturing jobs at home. Furthermore, some North Atlantic Trade Organization (NATO) allies have indicated a desire not to purchase small arms from U.S. vendors due to the overly burdensome process required to receive an exemption for the sale under the International Traffic in Arms Regulations (ITAR). This creates an environment where foreign countries can compete unfettered for our military small arms programs while many foreign nations are restricting US companies from competing in theirs. This regulation has not only been prohibitive for initial sales to allies but additionally creates excessively burdensome procedures for follow-on maintenance contracts.

Therefore, I am requesting the Departments of State and Commerce to publish the final rules to streamline the export licensing process in support of our domestic firearms and ammunition industry. I urge you to move forward with this process to ensure our competitiveness in the global market.

Sincerely,

Tom Cotton
United States Senator

General Comment

I believe this rule change is not in the best interest of the country or world. While the rule change seems to want to put certain weapons into the hunting category, weapons like the AR-15 are designed as weapons of war.

This is a threat to our interests overseas. Having these weapons transferred overseas creates a security threat as they can be procured from legitimate stores by terrorists and other criminal elements. There is no doubt American weaponry is far superior to the manufacturers and would serve our enemies well. As noted in various studies, there is a high percentage of weapons being used in terrorism and crimes around the world.

I can appreciate the administration trying to help the gun industry, but we can not feed the next generation of terrorists with US made weapons.

General Comment

As a UK citizen, I often travel to the US & visit stores such as Cabelas & Sportsman's Warehouse whilst there. I cannot fail to notice the price of certain items (cartridge cases & bullets) are less than half what we are charged in the UK for the same item.

I don't understand why it isn't allowed for us to purchase & bring back the small amounts of these items we wish to purchase.

After all, they're already available here- at a ridiculous price.

Because of this, I buy components made in the EU, as they're not hamstrung with regulations & thus measurably cheaper.

Fix this & US manufacturers will see a significant increase in demand from UK based firearms owners.

General Comment

Currently, many small firearms companies have many regulations stacked against them. Even some gunsmithing is pushing gunsmiths into a manufacturer category. This is just one of the many problems that could be changed with this proposed rule. It's time we reclassified many of these items and services to remove them from the ITAR and USML and place them on the CCL. Free up the market for our small companies and let the industry thrive.

General Comment

I fully support this. However, I believe all private individuals traveling abroad with personally owned firearms for lawful purposes such as hunting or competition should not be required to document the "export" through an official website designed for commercial exporters.

Also, since suppressors are very common among hunters and recreational shooters both in the U.S. and abroad and do not provide the U.S. or its allies with any special military advantage, the published proposals should include these on the CCL.

General Comment

Please consider repealing the federal tax stamp for a sound suppressor for firearms. Suppressors are common shooting devices in Europe and many other countries of the world. I have lost around 50 % of my hearing due to using firearms even though I always use hearing protection. Under the current rules due to taxes a suppressors are beyond the reach of normal users. The time for purchasing a suppressor averages a wait between 6 and 12 months. Please amend this item to help people save their hearing.

General Comment

I am responding as a life member of the NRA, at the behest of an NRA-ILA email alert to do so. I am in complete agreement that these changes to the economic strictures on guns and components, that are of civilian application and use, are necessary and should be done. Loosened or eased commercial regulations on US gun manufacturers and the components thereof, will make the US economy improve by being more competitive internationally. Meanwhile, the strictly military weapons and components will remain highly regulated (scrutinized), as they should be.

Sound suppressors should be included in the CCL. Sound suppressors are increasingly used for hunting and recreational shooting and their technology is rudimentary at best. They do not hold proprietary knowledge limited to the US and provide no advantage to the military of the US or it's allies.

In regards to Docket BIS-2017-0004 ("Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List"):

I support most of these proposed rule changes, as they would streamline the regulatory process. This would benefit Americans by reducing restrictions to trade, providing buyers and sellers with more options in the marketplace. It would also make US manufacturers more competitive against foreign importers. Finally, simpler and clearer rules will make it easier for new businesses to know what legal niches are available to them. The current system can be so vague and complex that many would-be entrepreneurs simply give up before starting because they're afraid of innovating in a way that ends up being deemed illegal for export.

I do not think that we should make it easier to export firearms from the United States. We do not need to provide more weapons to people overseas, who then have the potential to hurt us or our allies with them. Please leave the current rules in place, whereby firearm exports need to go through the State Department.

General Comment

I take issue with the use of the term "assault weapons" or "close assault weapons." Without a definitive explanation, the terms should not be used. The terms have been made a modern slang way of describing any number of semi-automatic firearms and the term has become a negative. Please use the term "semi automatic" rifles, pistols or other firearm.

I fully support to proposed rule to change how articles the President determines no longer warrant control under United States Munitions List (USML) Category I Firearms, Close Assault Weapons and Combat Shotguns; Category II Guns and Armament; and Category III Ammunition/Ordnance would be controlled under the Commerce Control List (CCL). This proposed rule is being published simultaneously with a proposed rule by the Department of State that would revise Categories I, II, and III of the USML to describe more precisely the articles warranting continued control on that list.

This improvement to US regulations will help legitimate commerce and to help the competitiveness of American companies in international trade.

Thank you for the opportunity to support this important change to Federal regulations.

General Comment

I support the proposed rule as written, but with a few minor changes:

1) the referenced magazine capacity restriction of 50 rounds should be doubled, to 100 rounds. There are several magazine manufacturers in the United States producing magazines of greater than 50 rounds that would benefit from this change, and such manufacture and enabling technology for magazines greater than 50 rounds is found worldwide. Limiting this magazine capacity to 50 rounds does not protect any special US or allied military advantage, but magazines of greater than 50 rounds are commonly found worldwide. Drum type magazines for the Kalashnikov family of weapons are a prime example.

2) the proposed rule does not address sound suppressors. Sound suppressors are readily available in the US and overseas, and the technical know-how to produce them is found worldwide. There are a plethora of US manufacturers fabricating sound suppressors that would benefit from this rule change, and the use of sound suppressors does not confer any special US or allied military advantage. Inclusion of sound suppressor deregulation would benefit US manufacturing interests without harming our military position.

3) the proposed rule does not address the currently onerous requirement that hunters and recreational shooters document an exportation of their firearms when leaving the country through a website clearly designed for commercial-level export firms. Such regulations do exceedingly little to protect US interests abroad, while unduly burdening hunters and sport shooters with unnecessary red tape and government interference. Repeal of such current regulation would not only ease the burden on law-abiding recreational marksmen, but it would reduce cost and overhead on the government side of the equation as well.

Thank you for your time and attention regarding this matter. Have a great day!

General Comment

Recent mass shootings have re-energized the Gun Control movement for political purposes and vanishment of all guns will be the goal to prevent this tragedy from happening again having as the ultimate goal the elimination of the Second Amendment.

However, the good initiative of addressing the high rate of gun violence in the Nation should be supported. We want resources and solutions put in place that will work. However, eliminating the Constitutional Amendment is not the solution. Creating laws and regulations together with enforcement of such is a starting point. There is no need for civilians and non law enforcement related people to carry AR, AK, MG or any type of automatic firearm.

I am a gun owner who fully supports the proper regulation, registration. A full licensing process before anyone can even own a gun should be required(regulation and policy). President Trump together with a group of representatives with various perspectives including Sportsman and Hunting Organizations, Anti-Gun Advocates, NRA, Law Enforcement, etc. establish guidelines. To structure the various federal and state laws/regulations which are too many so it can be narrowed down and all states would abide by it.

I would propose no longer than a 90 day Delayed effective date for proposed rule 83 FR 24166 "Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List".

Many small businesses stand to benefit from this proposed rule, especially if they do not import or export at all, only manufacture. All other systems checks are in place to regulate the manufacture of non-imported and non-exported firearms, through the ATF.

General Comment

The proposal to move the responsibility for overseas gun sales from the State Department to the Commerce Department is a bad idea. Stopping guns, especially assault weapons, from getting into the wrong hands should be a top priority. Immigration to this country is already spurred on by violent drug gangs in Central America. Easing the sale of more weapons will only further the immigration and drug problems. The guns could also be used against American soldiers in future combat situations.

There is only one goal of this proposal. That is, to help the gun companies sell more guns. The potential overall costs of expanded violence and illegal immigration have not been considered. The lack of a moral compass should bother anyone involved with this issue.

President Trumps New Proposal for easing restrictions on overseas gun sales is counter the well-being of American citizens. It would accelerate gun sales to Mexican and Central American violent gangs creating more violence in these countries. This would spur more immigration to the US. In addition, along with increased drug gang power would come more illegal drugs flowing into the US.

This proposal is a bad idea.

General Comment

I am appalled that this administration is proposing that responsibility for overseas gun sales move from the State Department to the Commerce Department. There is only one purpose for this - to ease restrictions on overseas gun sales - helping U.S. gun manufacturers to sell more guns. The outcome would be catastrophic. These guns would be sold to the very countries that already breed violent drug gangs, causing their citizens to flee to the U.S. Do we really want to spread the gun violence that is happening in our country to other countries? Do we want to create more deaths and drug trafficking? Do we want to create more homeless refugees? This is a lose-lose situation for everyone except gun manufacturers and the NRA. Please stop this horrible proposal!

General Comment

I am totally against any rule under the United States Munitions List that would allow increased gun sales from United States companies to overseas buyers. There is already too much violence and killing in the world involving guns. The United States government should not be involved in promoting gun sales overseas.

Thank you.

Making it easier to export weapons of war is a terrible idea. Keep control of these weapons and munitions as they are at present, and maintain that close watch over companies and corporations that would seek to arm militaries and paramilitaries around the world regardless of whether their interests align with those of the United States.

I agree with and support this rules change. While there are definitely items that need to be export-controlled in order to maintain our technological advantages over others and prevent them from falling into enemy hands, most small arms do not fall into that category. Small arms and ammunition are a well-understood and mature technology, removing them from the USML reduces the monetary burden on importers and exporters of firearms and ammunition without endangering the United States or its people. Furthermore, it could open up new markets to smaller manufacturers, which is good for the industry.

General Comment

Do not remove important export controls on non-military firearms, including handguns, semiautomatic assault rifles like the AR-15, and .50-caliber sniper rifles from your control. This change could (open) up a lot more risk and a lot more opportunity for illegal and illicit trafficking. A loosening of controls may also make it harder to identify and prosecute arms smugglers and illegal exporters.

The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more. The rule would seek to legitimize semiautomatic assault rifles as civilian products when they are, clearly, battlefield weapons.

This makes no sense at all. I object!

General Comment

Dear Ladies and Gentlemen,

I oppose the proposed rule for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. Regarding wide retail availability of firearms, about which comment has been requested, many countries, including Mexico, prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles.
2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.
3. National brokering laws are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. The switch from State to Commerce will mean that the brokers and financiers who arrange shipments of semiautomatic firearms will no longer have a statutory requirement to register and obtain a license, increasing risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.
4. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.
5. End-use controls are weakened by eliminating registration of firearms exporters, a requirement since the 1940s.
6. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing

weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

7. The Commerce Department does not have resources to enforce export controls, even before the addition of 30,000 firearms export licenses as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

8. The proposed change will reduce transparency and reporting on gun exports.

9. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

10. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

I agree completely!

An annual registration fee that manufacturers of defense items must pay, whether or not they export their products is simply unjustifiable. Please end this bad practice as soon as you can.

Applying the regime to private travelers/hunters is just bizarre. So, please end this practice as well.

Finally, and most importantly, please put an end to any harassing or censorship of firearm instructors within the U.S, bloggers, writers, and those posting online guides or tutorials discussing "technical data" about defense items. This seems to be a clear violation of our First Amendment right to free speech. So, I urge you to cease these activities immediately.

Promote free commerce and protect our rights at home and abroad.

Thank you for your consideration of our basic liberties.

General Comment

"BIS will also take into consideration any public comments submitted on this aspect of the proposed rule regarding imposing an EEI filing requirement in AES, as well as comments on the current practice of using the CBP Form 4457, as well as any other suggestions on alternative approaches for tracking such information.

Travelers leaving the United States temporarily would be required to declare the 0A501 and 0A505 items to a CBP officer prior to departure from the United States and present the firearms, parts, components, accessories, attachments, and ammunition they are exporting to the CBP officer for inspection, confirming that the authority for the export is License Exception BAG, that the exporter is compliant with its terms. "

As a competitive pistol shooter and current member of the US National Team that travels several times a year to international competitions, the 4457 system works and additional complication is unnecessary and burdensome.

Requiring travelers to present items to CBP each trip heavily impacts travelers beginning journeys from locations that do not have fully-staffed CBP offices and interrupting a journey to present items at a port of entry will induce delays, be problematic and could lead to the traveler breaking state and local laws by taking possession of firearms for the purpose of inspection on departure (eg: California prohibits individual possession of firearms and parts otherwise legal to check-through from Wyoming in checked baggage.). Even in locations with CBP offices, completion of a 4457 can require appointments and take several hours if officers are otherwise engaged.

Presenting unserialized items such as "ammunition, parts, components or accessories" in advance of travel would still be burdensome to travellers far from CBP facilities as well as wasteful, meaningless and largely unenforceable.

Please change the rule. I am a gunsmith in Massachusetts starting out on my own. I make Competition pistols by hand one at a time. This tax has made it so I have to make and sell pistols faster than I possibly can to realize any profit. This tax is barely noticeable to major manufacturer and prevents me from competing in the market place. Thank you for the opportunity to comment.

General Comment

I support the administration's efforts to remove these needlessly burdensome and unproductive requirements and regulations related to the exportation of certain classes of firearms, accessories and other parts. Americans are best served by free market trade and benefit from any effort to move towards an environment that fosters economic activity. The arguments for regulations that hinder free trade take many forms, but firearm regulations arouse a vigor in the opposition scarcely seen in other industries. Regardless of ones beliefs about guns, regulations like these do little to serve the proponents intended purpose, but do have a very real negative impact on American businesses and workers.

I have significant disagreement with the Trump administration with regard to the use of tariffs, quotas and cherry picking businesses for noncompetitive government support. However, I am proud of efforts like these that serve as a model to other countries about the mutual benefit of economic freedom.

The items to be opened for export are currently freely manufactured in many parts of the world. Not only will our businesses prosper if we engage in this traffic but we will improve our knowledge and capability. To address the fears of some of the commentators, a disproportionately armed world will result in nothing more than the crushing defeat of the weak. We should help those people help themselves.

As a close relative of someone murdered by an AR-15, I know that semi-automatic assault rifles have no civilian purpose. This proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. These are weapons of war and their only civilian purpose is carnage. They must not be transferred to the Commerce Department control where they would not be given proper oversight.

This proposed rule has one purpose and one purpose only: to garner profits for a U.S. gun industry that is faring poorly domestically. It comes after a multi-year lobbying campaign by the NRA and National Shooting Sports Foundation (the NSSF has already boasted the change would lead to a 20% increase in firearms exports). NO ONE other than the gun lobby asked for this change. It would make U.S. exports of small arms far more dangerous, by transferring oversight responsibilities to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more, which is inane.

I am in strong opposition to the proposed changes to the United States Munitions List. I was alerted to this proposed rule change by organizations who advocate for sensible gun control legislation domestically. Until we can agree on the definition and categorization of weapons designed for mass destruction and control their production and use domestically, we should not be modifying rules for the oversight of arms manufactured and distributed internationally. These rule changes are one of many ways that ordinary citizens who advocate for broader and stricter gun control are undermined by special interests who know where to target their efforts to relax the definition of weapons designed for war. In light of the recent efforts by the Justice Department to limit those seeking asylum from dangers in their homeland, the change in the rules is as much an immigration issue as it is an arms control issue.

FROM: Adotei Akwei, Amnesty International USA, Washington DC

I am writing on behalf of Amnesty International-USA to comment on proposed changes to the *International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III* issued by the Department of State and proposed regulations for the *Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML)*, both of which were published in the Federal Register on May 24, 2018.

As a global civil society organization focused on the promotion and protection of human rights, Amnesty International does not oppose the arms trade per se but calls for strong legally-binding controls to prevent arms being used for serious violations of international human rights and humanitarian law. We do document

the human rights impact of the irresponsible arms trade, raising concerns or calling for specific transfers that pose significant human rights risks to be halted.

Our comments and questions about the proposed changes to International Traffic in Arms Regulations and the Export Administration Regulations, thus, are all conveyed with potential human rights consequences in mind. In particular, we are concerned that some of the proposed changes weaken existing controls on transfers, increasing the risk that irresponsible brokers of small arms and light weapons could evade regulation, and arms will be diverted to states or non-state actors with poor human rights records. There is further risk of undermining US laws restricting transfers to foreign military units that have committed gross violations of human rights. Amnesty International has for many years called attention to the risks associated with untrammelled export of small arms and light weapons around the world. These arms have been associated with the deployment of child soldiers and the rise of insurgent groups. They are easier to divert than larger weapons and often end up in the illicit market.

The proposed changes to Categories I-III of the ITAR introduced as part of the Export Control Reform Initiative would transfer some specific and completely operable military-style semi-automatic weapons from the USML to the CCL and thereby affect some statutory controls on what are now considered defense articles. We do not believe that the line drawn between automatic and semi-automatic is as clear as the proposed regulations would suggest, and accordingly we are concerned that the changes would significantly diminish Congressional oversight of the transfer of these weapons.

Below we have elaborated and itemized our concerns for each set of proposed changes.

Comment on changes to ITAR proposed by Department of State and relevant to the changes proposed for the EAR/CCL.

1. Our principal concern here is with the risk of proliferation and diversion that could be exacerbated by the transfer of semi-automatic weapons to the CCL from the USML, where such weapons currently meet the statutory definition of “defense article” and are subject to a number of oversight mechanisms. The term “defense article” is used explicitly in several statutes to require controls on brokering, Congressional notification, and inclusion of an item on the US Munitions Import List controlled by the Bureau of Alcohol, Tobacco and Firearms. In addition, semi-automatic weapons are currently included as defense articles in Directorate of Defense Trade Control’s annual 655 report and are currently included, as defense articles, in the definition of security assistance (22USC 2014 and 22 USC 2304). The explanatory text accompanying the rules proposed by the State Department did not comment on the ancillary effect of removing semi-automatic weapons from the USML, but the implied changes are of concern to us. Several of these concerns are elaborated below.
2. Brokering Laws. The proposed changes to Categories I, II and III mean that brokers of semi-automatic weapons and related ammunition will be exempt from registration and licensing that is currently triggered by their inclusion as defense articles on the USML. On many occasions over the past two decades, human rights advocates have called attention to national brokering laws as a weak link in the chain of efforts to curtail illicit market transfers of small arms and light weapons. [See Amnesty International’s 2010 report, “[Deadly Movements](#).”]

Since 1996, US brokering laws have been seen among the strongest in the world. They apply to US agents wherever they are located as well as to foreign nationals operating from within the US; and they cover the full range of facilitating activity—including finance, insurance, transport and

trans-shipment (freight-forwarding). The US statutory provisions on brokering are robust, but their application is directly and specifically linked to the USML. Regulatory authority over brokers in the Export Administration Regulations that house the CCL is without a clear statutory basis. Consequently, we are concerned that moving semi-automatic weapons and related ammunition to the CCL – and simultaneously *removing* them from the USML – will lead to the US government relinquishing its regulatory authority over brokers of these weapons. This is of particular concern because many of the proposed changes to Categories I-III pertain to completely operable weapons or ammunition, and not simply components or software.

We agree with [the State Department](#)'s past assessment that establishing controls over brokering activity is a major step towards blocking unauthorized and illicit arms transfers that have fueled so many conflicts and serious human rights violations around the world. In some [well-known cases](#), states have been unable to prosecute notorious arms traffickers because local brokering laws were insufficiently robust. We strongly support the current requirement for arms brokers to be registered and licensed before arranging deals to transfer these small but still deadly weapons. For that reason, we oppose transferring semi-automatic weapons and ammunition to the CCL until and unless the continuing application of this requirement can be assured.

3. The proposed changes do not appear to be in line with established Wassenaar Categories I-III. Semi-automatic weapons are included in Wassenaar ML1 explicitly as munitions, with exceptions for smooth bore weapons used in hunting and sporting. From descriptions in the Wassenaar Munitions List, it seems clear that the intention was to differentiate between military and security items, on one hand, and dual-use items on the other. Semi-automatic weapons used by peacekeepers, military, and

police are intended to be controlled as munitions. The proposal to move semi-automatic firearms and large caliber rifles to the 500-series on CCL does not appear to be in line with this designation.

Moreover, we are concerned that the proposed changes may result in increased circulation of plans for non-automatic weapons produced by 3D printing technology, and this may be at odds with Wassenaar expectations, at least with regards to Wassenaar Best Practices Guidelines on Small Arms and Light Weapons. We are concerned about possible weapons proliferation from 3D printing. We took note of the well-publicized 2012 case where the State Department invoked ITAR (and by extension the USML) to oblige a manufacturer to remove plans for a 3D printable gun from the internet. The Fifth Circuit Court upheld the State Department's view that the device in question was a "defense article" covered by ITAR, but we are concerned that the case might have ended differently if the 3D gun were considered a CCL-500 item rather than a defense article included on the US Munitions List. From our perspective, this story illustrates the grave dangers of uncontrolled arms proliferation. The combination of internet dissemination and do-it-yourself 3D production is problematic in that the government has no knowledge of or control over the producer or end-user or the purpose to which the weapons will be put. Permitting such transactions would be a significant step backwards in normative development and contrary to US policy over past 25 years.

4. Registration and End Use Controls (Blue Lantern). The fact that manufacturers (and brokers) of semi-automatic weapons would no longer be required to register before applying for a license presents an additional concern. As we understand it, registration documents often provide regulators with important information during the licensing phase, and we are concerned that under the new rules the regulators at Commerce would not have access to the same background information that DDTC now uses

in the early stages of its monitoring and investigation. Moreover, we are concerned that Blue Lantern investigations would exclude transfers of semi-automatic weapons.

5. Waiting period before implementation. A sufficient amount of time should be allowed for Congress to enact statutory changes to address gaps noted above.

Additional comments on CCL rules proposed by Department of Commerce.

6. It appears that the new 500-series number would add specificity to reports required by the UN and the Wassenaar Arrangement, and that would be welcome. However, Amnesty International has concerns about changing the designation of semi-automatic weapons so as to exclude them from consideration as “defense articles,” elaborated in comments to the State Department above.
7. While some of the weapons that are proposed for inclusion on the CCL are commercially available in the US, that is not the case globally and – increasingly—state governments in the US seek to limit their sale. In recent months many commercial outlets have discontinued sales of semi-automatic assault weapons, and the proposed rule goes in the opposite, and wrong, direction. Seventeen American states have proposed a total of 56 bills to regulate or ban the sale of assault weapons in the 2018 legislative season.

8. Amnesty International generally supports strong oversight measures for arms transfers and from that perspective, we welcome detailed digital record-keeping requirements (serial number, model, caliber, and manufacturer) and increased enforcement of end-use controls. However, given the increase in license applications shifted to Commerce combined with the absence of information currently gained through the registration procedure, we are concerned at the likelihood that increased workload without commensurate resources will actually result in less oversight than at present under authority of the State Department.

Thank you for your attention to our concerns.

Sincerely,

Adotei Akwei

Re: RIN 0694-AF47

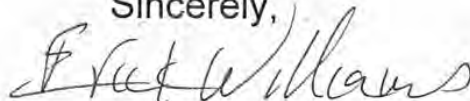

Greetings:

I am opposed to the proposed rule relaxing export controls on military-style weapons.

Please consider police officers, especially those in allied countries. Police officers do their work in the community, not behind the perimeters of military bases. In some troubled communities, officers are targeted by armed groups using weapons purchased on the small arms market. In some countries (like Pakistan) police officers die at a higher rate than soldiers.

The last thing we need is more .50-caliber sniper rifles being sold to terrorists. Please reconsider this rule.

Sincerely,

A handwritten signature in black ink, appearing to read "Erick Williams", written in a cursive style.

Erick Williams

Subject: ITAR Amendment Categories I, II, and III and
Related EAR Amendment RIN 0694-AF47

These comments relate the combined ITAR and EAR amendments to USG commitments to multilateral controls. Each of 33 numbered topics is listed in the order that topic appears in the Wassenaar Munitions List (WML). It is then subdivided into three parts, with the following number of examples:

- a 27 US and multilateral texts are either identical or substantially equivalent;
- b 74 US controls omit what WML controls (or WML omits US decontrols); and
- c 165 WML omits what US controls (or US omits WML decontrols).

Part b should either be added to US controls or the US should seek removal from WML controls. Part c should either be deleted from US controls or be proposed by the US to be added to WML.

These three parts omit second order impacts. For example, the number of differences between WML and US would increase exponentially if each difference in a weapon item was counted again when tallying the differences for ammunition, each of the types of components, production equipment, software, and technology related to that weapon difference.

The above a,b,c differences omit 16 examples of "and specially designed components therefor," which should be deleted from the proposed revised USML for consistency with the Export Control Reform intent to transfer insignificant items to the CCL (identified in topic 31 below).

These comments assume deletion of "specially designed" wherever it appears; use of "required" for software and technology; and a definition of "components" to include parts, accessories, attachments, and associated equipment.

1. Caliber

WML 1 Smooth-bore weapons with a caliber of less than 20 mm, other arms and automatic weapons with a caliber of 12.7 mm (caliber 0.50 inches) or less, as follows

Note: WML 1 does not apply to:

- a Firearms for dummy ammunition incapable of discharging a projectile;*
- b Firearms to launch tethered projectiles having no high explosive charge or communications link, to a range of less than or equal to 500 m;*
- c Weapons using non-center fire cased ammunition not fully automatic;*
- d Deactivated weapons*

- a Rifles and combination guns, handguns, machine, sub-machine and volley guns*

Note: WML 1.a does not apply to:

- a Rifles and combination guns, manufactured earlier than 1938;*
- b Reproductions of rifles and combination guns, the originals of which were manufactured earlier than 1890;*
- c Handguns, volley guns and machine guns, manufactured earlier than 1890 and their reproductions;*
- d Rifles or handguns to discharge an inert projectile by compressed air or CO₂.*

- b Smooth bore weapons as follows::*

- b1 for military use*
- b2 other smooth-bore weapons as follows:*
- b2a fully automatic;*
- b2b semi-automatic or pump-action*

Note: WML 1.b.2 does not apply to weapons to discharge an inert projectile by compressed air or CO₂

Note: WML 1.b does not apply to:

- a Smooth-bore weapons manufactured earlier than 1938;*
- b Reproductions of smooth-bore weapons, the originals of which were manufactured earlier than 1890;*
- c Smooth-bore weapons used for hunting or sporting purposes. These weapons must not be for military use or of the fully automatic firing type;*
- d Smooth-bore weapons for:*
- d1 Slaughtering of domestic animals;*
- d2 Tranquilizing of animals;*
- d3 Seismic testing;*
- d4 Firing of industrial projectiles; or*
- d5 Disrupting Improvised Explosive Devices (IEDs).*

N.B. For disruptors, see WML 4 and I.A.6 on the Dual-Use List.

WML 2 Smooth-bore weapons with a caliber of 20 mm or more, other weapons or armament with a caliber greater than 12.7 mm (caliber 0.50 inches), projectors ... as follows

a Guns, howitzers, cannon, mortars, anti-tank wapons, projectile launchers, ... rifles, recoilless rifles, smooth-bore weapons ...

Note 2: WML 2.a does not apply to weapons as follows:

a *Rifles, smooth-bore weapons and combination guns, manufactured earlier than 1938;*

b *Reproductions of rifles, smooth-bore weapons and combination guns, the originals of which were manufactured carlier than 1890;*

c *Guns, howitzers, cannons, mortars, manufactured earlier than 1890;*

d *Smooth-bore weapons used for hunting or sporting purposes. These weapons must not be for military use or of the fully automatic firing type;*

e *Smooth-bore weapons for any of the following:*

e1 *Slaughtering of domestic animals;*

e2 *Tranquilizing animals;*

e3 *Seismic testing;*

e4 *Firing of industrial projectiles;*

e5 *Disrupting Improvised Explosive Devices (IEDs);*

NB *For disruptors, see WML 4 and 1.A.6 on the Dual-Use List.*

USML I.b Fully automatic firearms to .50 caliber (12.7 mm) inclusive

USML I.d Fully automatic shotguns regardless of gauge.

USML II.a Guns and armament greater than .50 caliber (12.7 mm), as follows:

a1 Guns, howitzers, artillery, and cannons;

a2 Mortars;

a3 Rexoilolless rifles;

a4 Grenade launchers; or

a5 Development guns and armament greater than .50 caliber (12.7 mm) funded by DOD

Note 1: a5 does not control greater than .50 caliber

a *in production;*

b *subject to EAR; or*

c *being developed for both civil and military applications*

Note 2: Note 1 to a5 does not apply to USML items, whether in production or deve;lopment.

- 0A501.a Non-automatic and semi-automatic firearms of caliber less than or equal to .50 inches (12.7 mm)
- 0A501.b Non-automatic and non-semi-automatic rifles, carbines, revolvers, or pistols with a caliber greater than .50 inches (12.7 mm) but less than or equal to .72 inches (18.0 mm)
- 0A602.a Guns and armament manufactured between 1890 and 1919.

1a Caliber US identical to WML

- 1-5 WML 2.a/USML II.a1-3 guns, howitzers, cannon, mortars, and recoilless rifles greater than .50 caliber

1b Caliber US Omissions from Multilateral Controls

- 1 US omits WML 1 semi-automatic smooth bore caliber from 12.7 mm to 20 mm.
- 2 US omits WML non-automatic smooth bore caliber from 18 mm to 20 mm.
- WML 2a rifles greater than .50 caliber is broader than:
- 3 0A501.b, which is limited to non-automatic and non- semi-automatic rifles, carbines, revolvers, or pistols between caliber .50 and .72; and
- 4,5 USML II.a5 (and Notes 1 and 2) which applies to developmental guns funded by DOD but not if in production or being developed for both civil and military application;
- 6-10 US omits explicit WML 1.a mention of combined guns, handguns, machine, sub-machine and volley guns
- WML covers more than US by the following differences in decontrols in:
- 11 WML 1a Note b or 1b2 Note vs. Note 1 to 0A501
(Rifles or handguns) (weapons) specially designed to discharge an inert projectile by compressed air or CO2 omit portions of BB guns, pellet rifles, paint ball, and all other air rifles
- 12-14 WML 1b Note a and b and 2a Note 2 a and b vs. 0A501 Note 1
- a (Smooth bore weapons) (Rifles, smooth-bore weapons and combination guns) manufactured earlier than 1938;
- b Reproductions of (smooth-bore weapons) (rifles, smooth-bore weapons and combination guns), the originals of which were manufactured earlier than 1890 omit portions of "antique firearms manufactured before 1890 and reproductions thereof, muzzle loading black powder firearms except those designs based on centerfire weapons of a post 1937 design"
- 15,16 WML 2.a anti-tank weapons and projectile launchers.

1c Caliber Multilateral Omissions from US Controls

- 1 WML omits USML I(d) fully automatic shotguns more than .50 caliber.
- 2-4 WML omits 0A501.b explicit mention of carbines, revolvers, or pistols
- 5-17 US covers more than WML by omission of decontrols in Notes for WML1, WML 1.a, WML 1.b.2, WML 1.b, including US covers more than WML by the following differences in decontrols in:
 - a 0A501 Note 1 vs. WML 1a Note b or 1b2 Note:
(BB guns, pellet rifles, paint ball, and all other air rifles omit portions of (rifles or handguns) (weapons) to discharge an inert projectile by compressed air or CO2
 - b 0A501 Note 1 plus 0A602.a vs. WML 1b Note a and b:
US decontrol of antique firearms manufactured before 1890 and reproductions thereof, muzzle loading black powder firearms except weapons of a post 1937 design;
 - c 0A602.a guns and armament manufactured between 1890 and 1919 omits portions of WML decontrol of
 - 1 Smooth bore weapons manufactured earlier than 1938;
 - 2 Reproductions of smooth-bore weapons, the originals of which were manufactured earlier than 1890

2. Firearms using caseless ammunition

- WML 1.c weapons using caseless ammunition
- USML 1.a firearms using caseless ammunition

2a Firearms using caseless ammunition substantially equivalent

- 6 WML 1./USML 1.a

3. Firearms to integrate

USML 1.c Firearms to integrate fire control, automatic tracking, or automatic firing

3c Firearms to integrate Multilateral Omissions from US Controls

- 18 WML omits USML 1.c

4. Detachable

WML 1.d detachable cartridge magazines
WML 2.d detachable cartridge magazines

USML III.a7 Ammunition for fully automatic firearms or guns that fire superposed or stacked
projectiles
0A501.d Detachable magazines with a capacity of greater than 16 rounds for 0A501.a or .b

4b Detachable US Omissions from Multilateral Controls

17 WML 1.d and 2.d are broader than USML III.a7 or 0A501.d.

4c Detachable Multilateral Omissions from US Controls

19 WML omits USML III.a7

5. Sound suppressors

WML 1.d ... sound suppressors or moderators ... for WML 1.a, b, c.

USML I.e Silencers, mufflers, and sound suppressors ...

5a. Sound suppressors US Omissions from Multilateral Controls

7 WML 1.d/USML I.e Sound suppressors

5b. Sound suppressors US Omissions from Multilateral Controls

18 WML 1.d Sound moderators

5c. Sound suppressors Multilateral Omissions from US Controls

20 USML I.e Silencers, mufflers

21 USML I.e Sound suppressors for other than USML I

6. Mounts

WML 1.d ... gun mountings for WML 1.a,b,c,

WML 2.c ... weapon sight mounts for military use and for WML.2a;

WML 2.d Mountings ... for WML 2.a,

USML II.h3 ... automatically stabilize aim (other than gun rests).

USML II.j9i Mounts for independently powered ammunition handling systems

0A501.c ... mounting blocks (trunnions) ...

6b. Mounts US Omissions from Multilateral Controls

19-21 WML 1.d, 2.c, 2d are broader than USML II.h3, j9i, and 0A501.c

6c. Mounts Multilateral Omissions from US Controls

22-23 USML II.h3, j9i, and 0A501c omit for I or II or military use.,

7. Optical weapon sights

- WML 1.d ... optical weapon-sights ... for WML 1.a,b,c, except without electronic image processing, with a magnification of 9 times or less, provided not for military use or incorporate any reticles for military use.
- WML 2.c Weapons sights ... for military use and for ML 2.a
- USML II. j2 Sights to orient indirect fire weapons
- 0A501.y3 Iron sights
- 0A504 Optical sighting devices for firearms and components as follows:
- a Telescopic sights;
 - b Holographic sights;
 - c Reflex or "red dot" sights;
 - d Reticle sights;
 - e Other sighting devices that contain optical elements;
 - f Laser aiming devices or laser illuminators for use on firearms, and having an operational wavelength exceeding 400 nm but not exceeding 710 nm, except laser boresighting devices that must be placed in the bore or chamber to provide a reference for aligning the firearms sights.
 - g Lenses, other optical elements and adjustment mechanisms for articles in a,b,c,d,e, or i.
 - i Riflescopes that were not "subject to the EAR" as of (DATE ONE DAY PRIOR TO THE EFFECTIVE DATE OF THE FINAL RULE) and are for use in firearms that are "subject to the EAR."

7b. Sights US Omissions from Multilateral Controls

22,23 WML 1.d and 2.c omit technical limits in USMLII.j2, 0A501.y3, or 0A504.a-i

7c. Sights Multilateral Omissions from US Controls

25-34 USML II.j2, 0A501.y3, and 0A504.a-1 omit WML 1.d for WML 1.a,b,c or WML 2.c for WML 2.a

8. Flash suppressors

- WML 1.d ... flash suppressors
- USML II.e muzzle flash suppression devices

8b. Flash suppressors US Omissions from Multilateral Controls

24 WML 1.d omits USML II.e "muzzle"

9. Flame throwers

WML 2.a ... military flame throwers

USML II.b Flame throwers with a minimum effective range of 20 meters (i.e., whether or not military) plus

0A602.b Military flame throwers with an effective range less than 20 meters

9c Flame throwers Multilateral Omissions from US Controls

35 US is broader by covering non-military with minimum 20m range.

10. Discharge type and administer electric shock

0A503 Discharge type arms, non-lethal or less-lethal grenades and projectiles, ... and devices to administer electric shock

10c. Discharge type and administer electric shock Multilateral Omissions from US Controls

36 WML omits 0A503

11. Signature reduction

WML 2.a ... signature reduction devices for 2.a
USML II.e: Signature reduction devices for II a, b, or d

11a Signature reduction substantially equivalent

8 WML 2.a/USML II.e

12. Liquid propelling charges

WML 2.a Note 1: WML 2.a includes injectors, metering devices, storage tanks and other components for liquid propelling charges for WML 2.a

12b. Liquid propelling charges US Omissions from Multilateral Controls

25-28 US omits WML 2.a Note 1

13. Smoke and flares

WML 2.b Smoke ... projectors or generators for military use

III.d14 Illuminating flares ...
1A984 ... non-irritant smoke flares

13b. Smoke and flares US Omissions from Multilateral Controls

29,30 US omits WML 2.b smoke projectors or generators

13c Smoke and flares Multilateral Omissions from US Controls

37 WML omits III.d14 illuminating flares
28 WML omits 1A984 non-irritant smoke flares

14. Gas

WML 2.b ... gas ... projectors or generators and
WML 7.e Equipment ... for the dissemination of ... chemical agents

USML XIV.f1 Equipment for the dissemination of chemical agents.
1A607.c Equipment for dissemination of riot control agents

14a Gas identical

WML 7.e/USML XIV.f1 and 1A607.c

14b Gas US Omissions from Multilateral Controls

31,32 US omits WML 2.b projectors or generators

15. Pyrotechnic

WML 2.b ... pyrotechnic projectors or generators for military use

USML III.a6 Ammunition employing pyrotechnic material in the projectile base ...
d1 Projectiles that use pyrotechnic tracer materials that incorporate any material
having peak radiance above 710 nm ...;

1A984 ... pyrotechnic articles (excluding shotgun shells, unless the shotgun shells contain
only chemical irritants) having dual military and commercial use;

15b Pyrotechnic US Omissions from Multilateral Controls

WML 2.b is broader than 1A984 because:
33 WML omits US exclusion from pyrotechnic articles; and
34 US crime control reason is less restrictive than US national security reason applied to
other WML- controlled items.

15c Pyrotechnic Multilateral Omissions from US Controls

1A984 is broader than WML 2.b because:
39 articles is broader than projectors or generators; and
40 dual military and commercial use is broader than military use
41,42 pyrotechnic material omitted from WML

16. Signal

WML 2.b Note WML 2.b does not apply to signal pistols
0A503 decontrol arms solely for signal ...use

16b Signal US Omissions from Multilateral Controls

35 0A503 “solely” decontrol is narrower than WML 2.b Note decontrol

17. Kinetic energy

WML III.a Ammunition for weapons specified by ... WML 12
WML 12.a Kinetic energy weapon systems for destruction or effecting mission abort of a target
USML II.d kinetic energy weapon systems for destruction or rendering mission-abort of a target .

WML 12 Note 1.c. WML 12 includes ... target acquisition, tracking, fire control or damage assessment systems

USML II.j15 Kinetic energy weapon target acquisition, tracking fire control, and damage assessment systems

17a Kinetic energy substantially equivalent

10 WML 12.a/USML II.d
11 WML 12 Note 1.c/USML II.j15

18. Metal or plastic

WML 3 Note 1a WML 3 includes metal or plastic fabrications ...

USML III.a5 Ammunition, except shotgun ammunition, based on non-metallic cases, or non-metallic cases that have only a metallic base, which result in a total cartridge mass 80% or less than the mass of a brass- or steel-cased cartridge that provides comparable ballistic performance

d1 Projectiles that use pyrotechnic tracer materials that incorporate any material having peak radiance above 710 nm or are incendiary, explosive, steel tipped, or contain a core or solid projectile produced from one or a combination of the following: tungsten, steel, or beryllium copper alloys;

d6 Hardened cores, regardless of caliber, produced from one or a combination of the following: tungsten, steel, or beryllium copper alloy;

d8 Non-metallic cases, including cases that have only a metallic base, for III.a5;

0A505.x Note 2 0A505.x includes ... metallic cartridge cases, and standard metallic projectiles such as full metal jacket, lead core, and copper projectiles.

18b. Metal or plastic parts US Omissions from Multilateral Controls

36,37 WML 3 Note 1.a omits limits in USML III.a5, d1, d6, d8

18c. Metal or plastic parts Multilateral Omissions from US Controls

43,44 USML III.a5 and d8 non-metallic is broader than WML 3 Note 1a plastic

19. Primer

WML 3 Note 1.a ...WML 3 components include primer anvils

USML III.d10 Primers other than Boxer, Bordan, or shotshell types

Note: III.d10 does not control caps or primers of any type in use prior to 1890.

0A505.x Note 2 0A505.x includes Bordan and boxer primers.

19b. Primer Multilateral Omissions from US Controls

38 US omits primer WML 3 primer anvils

19c. Primer US Omissions from Multilateral Controls

45,46 WML omits USML III.d10 and 0A505.x primers

20. Cartridge links and belts

WML 3 Note 1.a WML 3 includes ...cartridge links for WML 1, 2, or 12

USML III.a2 Ammunition preassembled into links or belts;

USML III.d9 Cartridge links and belts for fully automatic firearms controlled in USML I or II

20b. Cartridge links and belts US Omissions from Multilateral Controls

39,40 US omits cartridge links for non-automatic or semi-automatic firearms...

20c. Cartridge links and belts Multilateral Omissions from US Controls

47 WML omits ammunition preassembled into links or belts

21. Anvils, bullet cups, rotating bands

WML 3 Note 1.a anvils, bullet cups, rotating bands

21b. Anvils, bullet cups, rotating bands US Omissions from Multilateral Controls

41-43 US does not control anvils, bullet cups, or rotating bands

22 Safing

WML 3.a Note 1.b Safing and arming devices, fuzes, sensor and initiation devices

MTCR 2A1f Weapon or warhead safing, arming, fuzing, and firing mechanisms ...

USML III.d11 Safing, arming, and fuzing components (to include target detection and proximity sensing devices) for the ammunitions in this category

USML IV.h9 Missile and rocket safing, arming, fuzing, and firing (SAFF) components (to include target detection and proximity sensing devices)

22a Safing substantially equivalent

12-15 safing, arming, fuzing, firing WML 3a Note 1b, MTCR 2A1f/USML III.d11, IV.h9

22c. Safing Multilateral Omissions from US Controls

48,49 WML and MTCR omit US target detection and proximity sensing devices

23. Power supplies

WML 3 Note 1.c power supplies with high one-time operational output

USML II.j14 Prime power generation, energy storage, thermal management, conditioning, switching, and fuel-handling equipment, and the electrical interfaces between the gun power supply and other turret electric drive components of II.d kinetic weapons

3A226 High-power direct current power supplies producing over 8 hours 100 V or greater with current output of 500 A or greater and current or voltage stability better than 0.1% over 8 hours

3A227 High-voltage direct current power supplies producing over 8 hours 20 kV or greater with current output of 1A or greater and current or voltage stability better than 0.1% over 8 hours.

23b. Power supplies US Omissions from Multilateral Controls

44 WML 3 Note 1.c is broader than USML II.j14 and 3A226 and 3A227 by omitting US limits on one time operational output

23c. Power supplies Multilateral Omissions from US Controls

50 USML II.j14 includes power supply features other than WML 3 Note 1.c output

24. Combustible cases

WML 3 Note 1.d combustible cases for charges

USML III.d7 ... combustible cases for USML II

24b. Combustible cases US Omissions from Multilateral Controls

WML 3 Note 1.d for charges is broader than USML III.d7for USML II

25. Submunitions and terminal guidance

WML 3 Note 1.e Submunitions including bomblets, minelets and terminally guided projectiles for WML 1, 2, or 12

USML III.d4 Projectiles ... guided or unguided for USML II

USML III.d5 ... sub-munitions (e.g., bomblets or minelets) ...for USML II

USML III.j13 Terminal seeker assemblies for category III

7A611 Military fire control, laser, imaging , and guidance equipment, as follows:

- a Guidance or navigation systems, not elsewhere specified on the USML, that are for a defense article on the USML or a 600 series item;
- x Components, including accelerometers, gyros, angular rate sensors, gravity meters (gravimeters), and inertial measurement units (IMUs), that are for USML XII or 7A611, and that are NOT:
 - x1 in the USML or elsewhere within 7A611;
 - x2 Described in 6A007, 6A107, 7A001, 7A002, 7A003, 7A101, 7A102, or 7A103; or
 - x3 Elsewhere specified in 7A611,y or 3A611,y.

25a Submunitions and terminal guidance substantially equivalent

16-18 WML 3 Note 1.e for WML 2 or 12/USML III.d4,5 for II

25b Submunitions and terminal guidance US Omissions from Multilateral Controls

WML 3 Note 1.e terminally guided projectiles for WML 1, 2, or 12 is broader than USML III.d4,5 only for II or 7A611 only for USML or 600 series. .

26. Electromagnetic

USML III.a8 Electromagnetic armament projectiles or billets for weapons with a design muzzle energy exceeding 5 MJ

26.b Electromagnetic US Omissions from Multilateral Controls

50 WML omits USML III.a8

27 Useless cartridge and shell casings

USML III Note 2 decontrol cartridge and shell casings rendered useless

27b Useless cartridge and shell casings US Omissions from Multilateral Controls

51 WML omits USML III Note 2 (WML 1 Note 1.d "Deactivated Firearms" does not apply to ammunition)

28 Shotgun shells

0A505.b Buckshot (No.4 .24" diameter and larger) shotgun shells

0A505.c Shotgun shells (including less than lethal rounds) that do not contain buckshot

1A984 Shotgun shells that contain chemical irritants

28c Shotgun shells Multilateral Omissions from US Controls

51-53 WML omits 0A505.b,c and 1A984 shotgun shells

29 Blank and dummy ammunition

WML 3 Note 2 c decontrol blank and dummy ammunition not incorporating components for live ammunition

0A505.d Blank ammunition for 0A501

29c Blank and dummy ammunitions Multilateral Omissions from US Controls

54 US omits WML 3 Note 2.c decontrol

55 WML omits 0A505.d

30 Fuse setting devices

WML 3b Fuse setting devices for WML 3a ammunition for WML 1, 2, or 12

USML III.b2 Fuze setting devices for USML III ammunition

30a Fuse setting devices substantially equivalent

19 WML 3.b/USML III.b2

31 Other Components

WML 1, 2, 3 headings each control specially designed components for 1, 2, 3 sub-items. These are matched by 0A501.x, 0A505.x, and 0A602.x, except for the following 16 examples of specially designed parts and components in proposed USML I, II, III: I.e, I.h1, I.h3, II.a5, II.j4, II.j5, II.j10 II.j13, II.j14, II.j15, III.a10, III.d4, III.d5, III.d11, III.d12, III.d13.

It is recommended that “and specially designed parts and components therefor” be deleted from I.e, I.h1, I.h3, II.a5, II.j4, II.j5, II.j10 II.j13, II.j14, II.j15, III.a10, III.d4, III.d5, III.d11, III.d12, and III.d13

31a Other components substantially equivalent

20-22 WML 1, 2, 3/0A501.x, 0A505.x, 0A602.x (after 16 deletions from USML recommended above)

31c Other components Multilateral Omissions from US Controls

56-124 The other USML I, II, III and 0A501-0A505 components not examined above are:

- USML I.g Barrels, receivers (frames), bolts, bolt carriers, slides, or sears for USML I....b ...;
- h1 Drum and other magazines for firearms to .50 caliber with a capacity greater than 50 rounds, regardless of jurisdiction of the firearm;
- h2 Parts and components for conversion of a semi-automatic firearm to a fully automatic firearm;
- USML II.j1 Gun barrels, rails, tubes, and receivers ...;
- j3 Breech blocks;
- j4 Firing mechanisms;
- j6 Servo-electronic and hydraulic elevation adjustment;
- j7 Muzzle brakes;
- j8 Bore evacuators;
- j9 Independently powered ammunition handling and platform interface as follows:
- j9i Carriages;
- j9iii Gun pallets;
- j9iv Hydro-pneumatic equilibration cylinders; or
- j9v Hydro-pneumatic systems scavenging recoil energy to power howitzer functions;
- j10 Recoil systems to mitigate the shock associated with the firing process of guns integrated into air platforms;
- j11 Independent ammunition handling;
- j12 Ammunition containers/drums, chutes, conveyor elements, and ammunition container/drum entrance and exit units;
- j13 Aircraft/gun interface units with rate of fire greater than 100 rounds per minute;
- j16 Classified
- USML III.d3 projectiles of any caliber produced from depleted uranium;
- d6 Hardened cores, regardless of caliber, produced from one or a combination of the following: tungsten, steel, or beryllium copper alloy;
- d15 Classified
- 0A501.c Barrels, cylinders, barrel extensions, ... bolts, bolt carriers, operating rods, gas pistons trigger housings, triggers, hammers, sears, disconnectors, pistol grips that contain fire control parts or components (e.g., triggers, hammers, sears, disconnectors) and buttstocks that contain fire control parts or components for 0A501.a or .b or USML I unless listed in I.g or .h
- e Receivers (frames) and complete breech mechanisms, including castings, forgings or stampings thereof for 0A501.a or .b
- 0A502 Shotguns, complete trigger mechanisms, magazines and magazine extension tubes, complete breech mechanisms, except equipment used exclusively to treat or tranquilize animals
- 0A505.x Note 3 The controls on parts and components in 0A505.x include those parts and components that are common to ammunition and ordnance described in 0A505.x and to USML III

32 Production

WML 18.a ... equipment for the production of WML 1, 2, 3

WML 18.b ... environmental test facilities and equipment therefor, for the certification, qualification or testing of WML

Note WML 18.a and .b include:

- a Continuous nitrators
- b Centrifugal testing ...
- c Dehydration presses
- d Screw extruders for military explosive extrusion
- e Cutting machines for sizing of extruded propellants
- f Sweetie barrels (tumblers) 1.85 m or more in diameter and having over 227 kg product capacity
- g Continuous mixers for solid propellants
- h Fluid energy mills for grinding or milling the ingredients of military explosives
- i Equipment to achieve both sphericity and uniform particle size in metal powder listed in WML 8.c.8 (aluminum powder particle size 60 micrometer or less)
- J Convection current converters for the conversion of materials listed in WML 8.c.3 (carboranes, decaborane, pentaboranes and their derivatives)

0B501 Test, inspection, and production commodities for development or production of 0A501 or USML I, as follows:

- a Small arms chambering machines
- b Small arms deep hole drilling machines and drills therefor
- c Small arms rifling machines
- d Small arms spill boring machines
- e Dies, fixtures, and other tooling

0B505 Test, inspection, and production commodities for development or production of 0A505 or USML III, as follows:

- a Tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment, not USML III* for production of 0A505.a or .x or USML III
- * No such items in proposed USML III
- b Equipment for production of 0A505.b
- c Equipment for production of 0A505.c
- d Equipment for production of 0A505.d
- x components for 0B505.a

0B602 Test, inspection, and production commodities for development or production of 0A602 or USML II

- a1 Gun barrel rifling and broaching machines and tools therefor
- a2 Gen barrel rifling machines
- a3 Gun barrel trepanning machines
- a4 Gun boring and turning machines
- a5 Gun honing machines of 6 feet stroke or more
- a6 Gun jump screw lathes
- a7 Gun rifling machines
- a8 Gun straightening presses
- b Jigs and fixtures and other metal-working implements for manufacture of 0A602 or USML II
- c Other tooling and equipment for production of 0A602 or USML II
- d Test and evaluation equipment and test models, including diagnostic instrumentation and physical test models for 0A602 or USML II

1B608,c Environmental test facilities for certification, qualification, or testing of 1C608 or USML V

32a Production substantially equivalent

- 23 WML 18.a for WML 2/0B602.c
- 24 WML 18.b/1B608.c

32b Production US Omissions from Multilateral Controls

- 52, 53 WML 18.a for WML 1 and 3 is broader than 0B501, 0B505, because "include" in WML 18.a Note makes a-j only non-definitive examples, whereas 0B501 controls only a-c and 0B505 controls only a-d and x.
- 54-63 US omits WML 18.a Note a-j
- 64-66 US omits WML 18.b for WML 1, 2, 3

32c Production Multilateral Omissions from US Controls

- 125-164 WML omits:
test and inspection in 0B501, 0B505, 0B602
development in 0B501 and 0B505
0B501.a-e, 0B505.,a-d, x, 0B602.a1-8, b, d

33 Software and Technology

WML 21 Software for:

- a1 development, production, operation, or maintenance of WML equipment
- a2 development or production of WML material
- a3 development, production, operation or maintenance of WML software
- b1 military use and modelling, simulating or evaluating military weapon systems
- b2 military use and modeling or simulating military operational scenarios
- b3 determining the effects of conventional ... weapons
- c enabling equipment not WML-controlled to perform military functions of WML-controlled equipment.

WML 22 Technology for

- a development, production, operation, installation, maintenance (checking), repair, overhaul, or refurbishing of WML-controlled items.
Note 1: development, production, operation, installation, maintenance (checking), repair, overhaul, or refurbishing of WML-controlled items remains under control even when applicable to any item not WML-controlled.
- b1 design, assembly, operation, maintenance, or repair of complete installations for WML-controlled items, even if the components of such production installations are not WML-controlled
- b2 development or production of small arms, even if used to produce reproductions of antique small arms
Note 2 WML 22 does not apply to:
 - a Technology that is the minimum necessary for the installation, operation, maintenance (checking), or repair of items not WML-controlled or whose export has been authorized
 - b Technology that is "in the public domain," "basic scientific research," or the minimum necessary information for patent applications.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of non-military firearms exports from the State Department to the Commerce Department. This proposed rule has one purpose and one purpose only: to garner profits for a U.S. gun industry that is faring poorly domestically. It comes after a multi-year lobbying campaign by the NRA and National Shooting Sports Foundation (the NSSF has already boasted the change would lead to a 20% increase in firearms exports). NO ONE other than the gun lobby asked for this change. It would make U.S. exports of small arms far more dangerous, by transferring oversight responsibilities to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more, which is inane. Im also disgusted by the rules attempts to legitimize semiautomatic assault rifles as civilian products when these battlefield weapons have stolen so many of our loved ones from us.

General Comment

I would like to offer my comment in absolute opposition to the proposed rule to transfer oversight of non-military firearms exports from the State Department to the Commerce Department. To me, this rule has profits for gun industry written all over it. Perhaps that's because the U.S. gun manufacturers are not doing well domestically. NO ONE other than the gun lobby asked for this change. It would make U.S. exports of small arms far more dangerous, by transferring oversight responsibilities to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more, which is inane. I'm also disgusted by the rule's attempts to legitimize semiautomatic assault rifles as civilian products when these battlefield weapons have stolen the lives of so many of our fellow Americans. If your agency approves this blatant corporate giveaway, I will do everything in my power to hold your leadership accountable for the resulting bloodshed that occurs globally. That will include advocating against your budget priorities across-the-board until a new administration cleans house.

General Comment

I am writing to submit my comment in opposition to the proposed rule to transfer oversight of non-military firearms exports from the State Department to the Commerce Department. This proposed rule appears to have just one purpose: to garner profits for a U.S. gun industry to offset reductions in domestic sales. It comes after a multi-year lobbying campaign by the NRA and National Shooting Sports Foundation (the NSSF has already boasted the change would lead to a 20% increase in firearms exports). NO ONE other than the gun lobby asked for this change; it has not been supported by any citizen groups. Transferring oversight responsibilities to an agency that prioritizes business over national security would make U.S. exports of small arms, including semi-automatic weapons, would be very dangerous to other countries of the world. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more, which represents an unfortunate loss of important monitoring. I also find the rules attempts to legitimize semiautomatic assault rifles as civilian products, when these battlefield weapons have stolen so many of our loved ones from us, to be appalling. If your agency approves this blatant corporate giveaway, I will do everything in my power to hold your leadership accountable for the resulting bloodshed that occurs globally.

Public comment 48. Individual. L McElroy. 6-5-18

Submitter Information

Name: Lisa McElroy

General Comment

I strongly oppose the proposed rule to transfer oversight of "non-military" firearms exports from the State Department to the Commerce Department. This proposal benefits the gun lobby and has come about after years of lobbying by the NRA and the NSSF. By transferring oversight responsibilities to an agency that prioritizes business over national security, this proposal would make U.S. exports of small arms more dangerous. Congress would lose its ability to oversee commercial weapons sales of \$1 million or more, This rule would also legitimize semiautomatic assault rifles, labeling them "civilian" products when these battlefield weapons have taken so many loved ones--innocent people at school, at church, at the movies, in a nightclub. This proposed rule is only in place to garner profits for the U.S. gun industry overseas--a cynical money grab that would be deadly for innocent people. Do the right thing--say no to this proposal and protect lives.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. Regarding wide retail availability of firearms, about which comment has been requested, many countries, including Mexico, prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that

compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

End-use controls are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have resources to enforce export controls, even before the addition of 30,000 firearms export licenses as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[ii] The export of these weapons should be subject to more controls, not less.

General Comment

I oppose the proposed rule on gun exports because. Proposed rule treats semi-automatic assault rifles as non-military But US troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles & handguns, as well as of any larger caliber firearm. Many semi-automatic rifles are also easily converted to fully automatic. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate export of arms & would eliminate Congressional oversight for gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons which limits its ability to comment on related human rights concerns, as it recently did on the Philippines & Turkey. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. In a September 15, 2017, letter, Senators Ben Cardin, Dianne Feinstein, & Pat Leahy explicitly noted that this move would violate Congressional intent & effectively eliminate Congress proper role.

New rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the taxpayers will absorb the cost of reviewing applications and processing licenses not the gun exporters that benefit from these sales.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

Rule would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. Registration of

exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. Transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking. Rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of effectively enabling 3D printing of firearms in US & globally. By eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could he State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

Proposed change will reduce transparency and reporting on gun exports by eliminating Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency Commerce Department - whose principle mission is to promote trade. General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of non-military firearms exports from the State Department to the Commerce Department. This proposed rule has one purpose and one purpose only: to garner profits for a U.S. gun industry that is faring poorly domestically. It comes after a multi-year lobbying campaign by the NRA and National Shooting Sports Foundation (the NSSF has already boasted the change would lead to a 20% increase in firearms exports). NO ONE other than the gun lobby asked for this change. It would make U.S. exports of small arms far more dangerous, by transferring oversight responsibilities to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more, which is inane. Im also disgusted by the rules attempts to legitimize semiautomatic assault rifles as civilian products when these battlefield weapons have stolen so many of our loved ones from us. If your agency approves this blatant corporate giveaway, I will do everything in my power to hold your leadership accountable for the resulting bloodshed that occurs globally. That will include advocating against your budget priorities across-the-board until a new administration cleans house.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. General Comment

I am Diane Pasta, a Quaker (Religious Society of Friends). As a person of faith and a citizen of the US, I am concerned about gun violence and militarization, which makes everyone less safe.

I oppose the proposed rule for the following reasons:

- 1.The proposed rule treats semi-automatic assault rifles as "non-military." But many state and non-state groups use semi-automatic rifles in armed conflicts. We should prohibit civilian possession of semi-automatic rifles and handguns, and larger caliber firearm. Semi-automatic rifles are easily converted to fully automatic firearms. These weapons have substantial military utility,so transfer of these firearms to Commerce Dept.control is inconsistent with Congressional attempts to regulate the export of arms.
- 2.The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons, limiting its ability to comment on related human rights concerns. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress' proper role.
- 3.The switch from State to Commerce will mean that the brokers and financiers who arrange shipments of semiautomatic firearms will no longer have a statutory requirement to register and obtain a license, increasing risk of trafficking.
- 4.The rule reduces end-use controls for gun exports. It would eliminate the State Department's Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Government's information on human rights violations, reducing the ability to effectively deny

weapons licenses to international human rights violators.

5. End-use controls are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter's history. But the transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking.

6. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of weapons. We can't have everyone with access to a 3D printer, anywhere, entitled to produce a lethal weapon. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms. It is effectively eliminating many means to do background checks on domestic sales and end-use controls on international exports.

7. The Commerce Department does not have resources to enforce export controls, even before the addition of 30,000 firearms export licenses as a result of this rule predicted by Commerce. The BIS's enforcement office, with no staff in many parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

9. This rule would transfer gun export licensing to an agency - the Commerce Department - whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

10. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control are weapons of choice for criminal organizations in countries that have increased violence. The export of these weapons should be subject to more controls, not less.

Thank you for the opportunity to comment on this important matter.

General Comment

The proposed rule changes must be amended to improve American firearm manufacturers ability to manufacture and export civilian spong use firearms. Firearms other than fully automatic weapons have no military use or provide any advantage as these firearms have been in existence and production around the world for more than 50 years and are common nearly everywhere you go in the world. The use of these firearms for all sporting and lawful purpose is common worldwide wherever the ownership of firearms is not highly restricted. Allowing the export of these firearms will greatly improve the ability of American manufacturers of these products, most of which are small businesses that can't afford the onerous requirements of ITAR export, the ability to sell their products on the open market and increase the footprint of American made products worldwide.

The rules for traveling out of the US with these firearms also needs to be amended to allow a US citizen the ability to travel to a foreign country with their personally owned weapons without onerous and unnecessary export control to allow individuals the ability to travel to said foreign countries for the purposes of competition, hunting or personal protection any place said weapons are legal to possess. These firearms have no military use or pose any military threat to our country as they are already available all over the world.

General Comment

To: Secretary of State Mike Pompeo
Secretary of Commerce Wilbur Ross

We urge you to reverse the proposed regulations that will make it easier to export semi-automatic weapons and ammunition, eliminate Congressional oversight of these sales, weaken end-use controls, and enable production of 3D weapons anywhere. We have seen the effects of these weapons in U.S. shootings, and know they are used around the world to kill and attack hundreds of people every day in violent crime, wars, and political violence. U.S. export controls for weapons used in violence should be made stronger, not weaker.

Public comment 56. Individual. A Welsh. 6-18-18

Submitter Information

Name: Amy Welsh

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as "non-military." This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

As gun violence continues to tear lives apart at an alarming rate, we need tougher gun controls now more than ever. The U.S. needs to be proactive in their approach, especially when global security is such an issue. At this point, we're not even being reactive.

General Comment

Export license oversight for firearms should remain with the State Department. The proposed rule to move it to Commerce is short-sighted and will only aggravate the crisis we have in this country surrounding firearm deaths. We also must not take away valuable tools that law enforcement have to fight organized crime and terrorism across borders.

I also strongly oppose transferring the cost of processing licenses from gun manufacturers to taxpayers and removing blocks on the 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls. This rule only makes sense if you put the profits of gun manufacturers ahead of public safety and the safety of our police and border agents--in other words, no sense at all.

General Comment

I am deeply opposed to the changes outlined in this proposal. Sales for these weapons should not be controlled by the Commerce Department, but should remain the purview of the State Department. This is central to homeland security, not commerce. Further, Semi automatic assault weapons are NOT civilian weapons and should not be treated or classified as such. And moreover, the whole initiative appears to be a transparent effort by gun lobbyists to increase profits in the industry without regard to public safety. I am strongly opposed to this proposal. Please reverse the proposed regulations that will make it easier to export semi-automatic weapons and ammunition. We should not eliminate Congressional oversight of these sales. There is a reason that we need Congressional oversight in order for ALL American voices to be heard. We must not weaken end-use controls and enable production of 3D weapons anywhere. We have seen the effects of these weapons in U.S. shootings, particularly in our schools. We must not be partly responsible for killings of innocents in other countries. U.S. export controls for weapons used in violence should be made stronger, not weaker.

General Comment

The United States should be passing stricter gun control laws, not attempting to make it easier to distribute weapons of war abroad. Our nation should not be making the world less safe by putting dangerous weapons in civilian hands.

General Comment

Kindly accept this comment in strong opposition to this proposed Rule. Among other reasons, liberalizing the export of firearms to foreign countries may allow terrorists to have easier access to firearms without sufficient foreign safeguards in place. If the U.S. government were to allow the gun industry to experience substantial profits due to this rule change at a minimum it should secure assurances & best practices from gun manufactures to keep US citizens safer such as assurances against sale of firearms to retailers with a record or suspicion of gun trafficking.

General Comment

Hi --

Reducing regulations on firearms, guns, and ammunition is a dangerous and publicly unsupported plan. With the increase in gun violence in the US, there has been a significant increase in support by the public for INCREASED gun regulations, not decreased gun regulations that are at the whim of the President. The ability to sell more firearms outside the US more freely makes the US an arms dealer to criminals world wide. That is something that the Justice Department has fought for decades. This policy change only makes sense if you stand to gain financially from it, and this administration most certainly does stand to gain financially. The NRA will continue to fund them indefinitely with this type of change.

Please do NOT make this change, it is anti-American and flies in the face of everything American was built to represent.

Sincerely,

Dana Haessig

General Comment

Gun Manufacturers make enough money without changing who oversees them. Making it easier for them to sell guns anywhere, with rules that are pretty much non-existent is ridiculous. Don't do it.

Please do NOT allow this rule to go into effect! do NOT transfer the oversight of international gun sales to the Commerce Department (from the State Dept). This is a baldly calculated effort to deregulate the overseas sale of firearms, an act that favors manufacturers of weaponry while deregulating the US's distribution of firearms to other nations.

General Comment

I am strongly opposed to the proposed rule to transfer oversight of non-military firearms exports from the State Department to the Commerce Department. This proposed rule has one purpose and one purpose only: to garner profits for a U.S. gun industry that is faring poorly domestically. It comes after a multi-year lobbying campaign by the NRA and National Shooting Sports Foundation (the NSSF has already boasted the change would lead to a 20% increase in firearms exports). NO ONE other than the gun lobby asked for this change. It would make U.S. exports of small arms far more dangerous, by transferring oversight responsibilities to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more, which is insane. Im also disgusted by the rules attempts to legitimize semiautomatic assault rifles as civilian products when these battlefield weapons have stolen so many of our loved ones from us. If your agency approves this blatant corporate giveaway, I will do everything in my power to hold your leadership accountable for the resulting bloodshed that occurs globally. That will include advocating against your budget priorities across-the-board until a new administration cleans house. It's time to put commonsense ahead of the almighty dollar.

General Comment

Im 60 years old and semi-retired. I operated a gunsmith shop in my early twenties but gave it up to better support my family. However, I always intended to go back to gunsmithing later in life. Finally that happened, I spent quite a bit of money that would have funded my retirement starting my business. I had a new building built, I bought and learned to use 3 manual lathes and a mill with the intention of getting a manufacturers FFL and making a few custom firearms a year, restoring and selling a few older firearms a year and doing general repairs. I figured I would make \$5000 to \$10,000 a year to supplement my retirement while doing a job my community needed. I probably spent \$85,000 or so on my building, equipment and tools.

However, the Obama administration changed the interpretation of the ITAR rules and started requiring holders of FFL-07 licenses (manufacturing FFL) to send nearly \$3000 per year to the state department in ITAR fees. This could well have been half or more of my yearly profits and meant I had to settle for a type 01 FFL and be a gunsmith only. At that time, as a gunsmith I could do nearly any repair, customization or improvement for a customer on his/her firearm but could not improve, customize or refinish a firearm and then sell it as that would make me a manufacturer. Although this wasnt the future Id worked towards for nearly 40 years, it was better than nothing.

Then, in July of 2016 the Obama administration again reinterpreted the existing rules and decided to bring virtually all the jobs gunsmiths do under the ITAR umbrella. This was obviously intended to bankrupt the nations gunsmiths, and, I suspect to chill the pre-election free speech of Gunsmith/2nd Amendment activists such as myself. It did not suppress my free speech but it did cause me to start turning away 90% of my potential customers. Under these rules refinishing firearms and replacing parts is about the only thing a gunsmith is now allowed to do. According to the 2nd Obama reinterpretation of the ITAR rules even making a screw or stock for a 150 year-old firearm could be interpreted as a violation.

Since these rules took effect in July of 2016 I dont believe I have made a monthly profit, even once. Threading barrels, customizing, , making stocks, dovetailing sight groves, re-chambering, making obsolete parts and the like are all still banned to my knowledge. And, with the exception of the occasional machine shop work, my three lathes and my mill are still idle.

I am again considering closing my shop because of this. My insurance alone is nearly a grand a year and Im not sure how long I can survive while waiting on this to be fixed. Please, lets get the State Department out of the gunsmith business and again allow a gunsmith to make and sell a few custom firearms a year without being bankrupted by ITAR.

Submitter Information

Name: Alice Gelman

General Comment

Hello,

My name is Alice and I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as "non-military." This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

Thank you,
Alice

General Comment

I urge ATF to finalize its proposed rule clarifying that bump-fire stocks, along with other "conversion devices" that enable semiautomatic weapons to mimic automatic fire, qualify as "machineguns" under the National Firearms Act and are generally illegal to possess.

On the night of October 1, 2017, a gunman opened fire from a hotel room on the 32nd floor of the Mandalay Bay hotel into the 22,000 person crowd at the Route 91 Harvest country music festival in Las Vegas, Nevada, killing 58 people and injuring more than 500. The gunman fired more than 1,100 rounds of ammunition in 11 minutes, using semiautomatic rifles modified with dangerous firearm accessories designed to dramatically accelerate the rate of fire, commonly known as "bump-fire stocks." These devices are intended to circumvent the restrictions on possession of fully automatic firearms in the Gun Control Act of 1968 and the National Firearms Act of 1934 by allowing an individual to modify a semiautomatic rifle in such a manner that it operates with a similar rate of fire as a fully automatic rifle. Bump stocks and similar "conversion devices" that accelerate the rate of fire of a semiautomatic firearm are extremely dangerous and pose a substantial risk to public safety.

In the absence of immediate action by Congress, ATF should finalize its proposed rule, clarifying that conversion devices like bump-fire stocks are included in the definition of "machinegun" under the National Firearms Act of 1934. And then Congress must act as well to ensure that manufacturers cannot continue to endanger public safety by designing devices that imitate machine guns and subvert the law. The continued presence of these dangerous devices puts all of our communities at risk and both Congress and ATF must take action quickly to address this threat.

I also am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as "non-military." This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons

is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as "non-military" -- even though US troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also eliminates Congressional oversight for important gun export deals, transfers the cost of processing licenses from gun manufacturers to taxpayers, and enables unchecked gun production in the US and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and lacks the resources to adequately enforce export controls.

Although the current administration views everything on earth as a commodity, some things should not be for sale. Those include semiautomatic weapons. Congress giving up oversight of weapon exports is an abrogation of their responsibilities.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as "non-military" and just another export product, which they most definitely are not. U.S. troops routinely use their weapons in semiautomatic mode. Semiautomatic weapons are used by state and non-state groups in armed conflicts, by drug traffickers and criminal organizations, and the civilian possession of such weapons is prohibited in many countries. The sale of semiautomatic weapons is not a simple commercial transaction.

This misguided proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls. The proposed rule also eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

The national interest of the U.S. is not well served by moving export license oversight for firearms from the Department of State to the Department of Commerce because the wider and less restricted distribution of essentially military weaponry is inimical to the promulgation of international peace and civilian safety, or suppression of misuse of firearms by state and individual actors. The proposed rule change treats semiautomatic assault rifles as "non-military" despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, such weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. I am writing to STRONGLY oppose moving export license oversight for firearms from the Department of State to the Department of Commerce.

Guns sold for profit contribute to violence around the world as well as in our own country. The US government should be making it MORE difficult to manufacture and export weapons. EVEN if sold to so-called 'friends' of the administration, many end up in the hands of those who use them against American citizens and other innocent people.

Under the proposed rule change semiautomatic assault rifles are treated as "non-military." This, despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, despite the fact these weapons are used by state and non-state groups in armed conflicts, and despite the fact the civilian possession of such weapons is prohibited in many countries.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political

violence, terrorism, and human rights violations. This is not and WILL NEVER BE acceptable as the end result of a business model.

Firearms, guns ammunition and related article MUST be subject to more controls, NOT fewer.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military.

This move is only for the profit of the firearm industry. They value profit over human life, and I implore the Commerce Department to view this move as what it is: a gift to big donors, including the NRA, of the current administration. It's function is to create easier purchases of firearms and weapons to the very people that should not have them in the first place. Please have a conscience - we need someone to be the adults in the room.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose moving export license oversight for firearms from the Department of State to the Department of Commerce and any move that reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls. Please don't.

I respectfully ask that changes not be made in the present regulations regarding exporting of semi-automatic weapons and ammunition abroad. With all the illegal arms now circulating in the world, the U.S. should be trying to reduce not add new firearms.

General Comment

I am writing in strong opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce. The proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls. This change defies sound reasoning, Aristotelian logic, and common sense to place the baseness of greed above global public safety.

Firearms are used to kill thousands of people every day around the world in acts of organized crime, street crime, political violence, terrorism, and myriad human rights violations. They should be subject to more controls, not fewer. Humanity deserves to be free from the threats posed by deranged, greedy, corrupt individuals like those responsible for proposing this absurd change.

Thank you for considering my comments.

I am wondering how the NRA was able to write legislation supporting the transfer of licensing oversight of weapons of war from the Department of State to the Department of Commerce? At least that is what is occurring to me with this request. I am solidly against moving the oversight of weaponry to the Department of Commerce.

"I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military.

Semiautomatic assault rifles are not sporting or hunting rifles, and not meant for commercial hunting, so they should

not be governed by the Department of Commerce.

U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state

groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries.

Semiautomatic

assault rifles are used in military settings and therefore these types of firearms export license oversight should remain

with the Department of State.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting

on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction,

and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately

enforce

export controls. Semiautomatic assault rifles usage by private citizens results in increased crime, violence, family accidents, and mass murder, and should be subject to more federal government controls, not fewer.

Please do not move export license oversight for firearms from the Department of State to the Department of Commerce.

Re: Docket No. BIS-2017-0004; RIN 0694-AF47

Greetings:

These are comments on the Commerce Department proposed rule, “Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control under the United States Munitions List.” 83 Federal Register 24166, May 24, 2018, <https://www.federalregister.gov/documents/2018/05/24/2018-10367/control-of-firearms-guns-ammunition-and-related-articles-the-president-determines-no-longer-warrant>

Background

The rules governing firearm exports should give the police profession a greater, better-defined role in the evaluation of firearm export license applications.

15 CFR 738.2 (d) (2) (ii) (A) (CC) provides that items proposed for export are controlled for “crime control” reasons. The practice of controlling exports for crime control reasons reflects a basic principle

underlying arms control treaties and statutes. The proliferation of weapons should be controlled because it tends to impair the rule of law.

To assure that the rule of law is not impaired by firearm exports, licensing officials should consider the effect of proposed exports on local communities, public safety, peace officer safety, crime control, and control of civil disturbances.

In several parts of the world, armed gangs are impairing the rule of law, and their activities cross borders. As a major producer of firearms, the USA, through export law enforcement, can help limit the flows of weapons to armed gangs. The police profession, closely associated with the rule of law, is a critical stakeholder in the arms export licensing process.

Unfortunately, neither the current nor the proposed rules governing firearm exports provide for export license applications to be vetted by people with police backgrounds.

Historically, the weapons analysts who vet arms export licenses have been with the Defense Department. Military analysts worry (as they should) about the impact of weapons on the battlefield. But defense analysis does not necessarily evaluate transactions with an eye to the security needs of civilian communities -- public safety, peace officer safety, crime control, and the prevention and management of civil disturbances.

Firearms that “no longer warrant control” by the military can nonetheless destabilize communities, overwhelm peace officers and contribute to civil disorder.

Notorious examples of the adverse effects of firearm proliferation have come from Africa and the Middle East as well as closer to home -- Mexico and Central America.

Alex Yablon, *“American Guns Drive the Migrant Crisis that Trump Wants to Fix with a Wall”* (Trace, May 25, 2017) <https://www.thetrace.org/2017/05/gun-trafficking-central-america-immigrant-crisis-trump-wall/>

Jonathan Blitzer, *“The Link Between America’s Lax Gun Laws and the Violence That Fuels Immigration”* (New Yorker, March 22, 2018), <https://www.newyorker.com/news/news-desk/the-link-between-americas-lax-gun-laws-and-the-violence-that-fuels-immigration>

Highly destructive weapons should not be exported to civilians.

Whatever short term economic benefit those exports may generate is outweighed by the risk those weapons pose to the safety of peace officers and the rule of law.

We suggest a maximum limit on firepower exported to civilians. Firearms with a muzzle energy higher than 5,000 Joules should be barred from export to non-government end-users. (In ballistics, muzzle energy, commonly expressed in Joules or foot-pounds, is a measure of the destructive potential of a firearm or cartridge. Tables comparing the muzzle energies of various firearms are available on the Internet.)

See: *“Clear and Present Danger: National Security Experts Warn About the Danger of Unrestricted Sales of 50 Caliber Anti-Armor Sniper Rifles to Civilians”* (Violence Policy Center, July 2005), <http://www.vpc.org/studies/50danger.pdf>

Weapons of high destructive potential have no place on any street in the world, and they should be off-limits for export to civilians.

Policy Recommendations

The following changes should be incorporated in the new rules:

1. Prohibit export of firearms, above a maximum limit of destructiveness, to civilian end-users, world-wide. A muzzle energy of 5,000 Joules (3,688 foot-pounds) is here proposed as the maximum limit.
2. Prohibit exports of firearms with muzzle energies less than 5,000 Joules, to civilian end-users, world-wide, if the firearm is likely to outmatch weapons carried by local peace officers or otherwise impair the efforts of peace officers to control crime and civil disturbance.

3. Recognize the police profession as a stakeholder in firearm exports. Give the profession a role in vetting license applications.

Technical Language

The recommendations above may be translated into the EAR framework using the technical language below.

4. In 15 CFR Appendix Supplement No 1 to Part 738, the Commerce Country Chart, add a column 4 under crime control. Mark each country box to indicate that the crime control reason for control applies to all countries.

5. In 15 CFR 738.2 (d) (1), reason for control item 5. Amend item 5 to read (changes in CAPS):

5: Items warranting national security, CRIME CONTROL, or foreign policy controls at the determination of the Department of Commerce.

6. In 15 CFR 738.3 (a) (1) add a sentence that reads: A LICENSE IS REQUIRED FOR ALL DESTINATIONS FOR FIREARMS AND ASSOCIATED EQUIPMENT CONTROLLED UNDER ECCN 0A501, 0A502, 0A504, AND 0A505, WHICH ARE SUBJECT TO 15 CFR 742.7 (b) (2) or (b) (3).

7. In 15 CFR Appendix Supplement No 1 to Part 774, the Commerce Control List, add crime control as a reason for control under 0A501, 0A502, 0A504, and 0A505. CC column 4 (referred to above) should apply to each, entire entry. In each entry, insert: ALL ITEMS ARE SUBJECT TO THE CRIME CONTROL LICENSING POLICY IN 15 CFR 742.7 (b) (2) or (b) (3).

8. Amend 15 CFR 742.7 (b) to read as follows (changes in CAPS):

(b) Licensing policy.

(1) EXCEPT AS DESCRIBED IN (b) (2) and (b) (3) BELOW, applications for items controlled under this section will generally be considered favorably on a case-by-case basis unless there is civil disorder in the country or region or unless there is evidence that the government of the importing country may have violated internationally recognized human rights. The judicious use of export controls is intended to deter the development of a consistent pattern of human rights abuses, distance the United States from such abuses and avoid contributing to civil disorder in a country or region.

(2) A LICENSE APPLICATION FOR A FIREARM WITH MUZZLE ENERGY OF 5,000 JOULES (3,688 FOOT-POUNDS) OR MORE (AND EQUIPMENT ASSOCIATED WITH THE FIREARM) SHALL BE DENIED TO NON-GOVERNMENT END-USERS.

(3) A FIREARM WITH MUZZLE ENERGY LESS THAN 5,000 JOULES (3,688 FOOT-POUNDS), AND EQUIPMENT ASSOCIATED WITH THE FIREARM, MAY BE APPROVED TO NON-GOVERNMENT END-USERS UNLESS THE FIREARM WOULD TEND TO OUTMATCH WEAPONS NORMALLY CARRIED BY PEACE OFFICERS ON ROUTINE PATROL IN THE AREA WHERE THE WEAPON WOULD BE USED OR OTHERWISE IMPAIR THE EFFORTS OF PEACE OFFICERS IN THE AREA TO CONTROL CRIME AND CIVIL DISTURBANCE.

9. In 15 CFR Appendix Supplement No 2 to Part 730, Technical Advisory Committees, allow creation of a technical advisory committee with representation from the police profession to provide technical

advice on matters such as police procedure, public safety, peace officer safety, crime control, and control of civil disorder. At least two organizations in the United States -- one federal and the other state-based -- may be competent to give the Commerce Department technical advice on police standards outside the USA. They are the International Criminal Investigative Training Assistance Program, <https://www.justice.gov/criminal-icitap>, and the International Association of Directors of Law Enforcement Standards and Training, <https://www.iadlest.org>.

Thank you for the opportunity to submit comments on the proposed rules.

Sincerely,

Erick Williams, JD

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military.

Such a categorization does not reflect reality. U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Semi-automatic rifles are not appropriate for civilian populations. The Constitution does not guarantee the right to own weapons of mass destruction. The role of government is to protect its citizens and to combat the rise in mass killings of civilians that is directly tied to easy access to semi-automatic weapons.

General Comment

I strongly support this proposed rule change. As it stands today, the regulations imposed upon small to medium sized businesses under ITAR are stifling to business. Most gunsmiths struggle to make a living without the added burden of unnecessary regulatory fees. The modern gunsmith will make his living performing functions like threading muzzles on hunting rifles, installing a new barrel, and minor repair work, none of which constitute manufacturing according to ATF, but which subject him to ITAR regulations and fees. This is a good change, to move the conventional local gunsmith away from these ridiculous burdens.

Today's action will take about 30 seconds.

WHAT'S HAPPENING: The Trump administration wants to transfer licensing and oversight of firearms exports from the State Department to the Commerce Department.

WHAT IT MEANS: The proposal weakens controls over semiautomatic assault weapons and may deregulate 3D printing of guns. It could also weaken controls on gun imports, which means more U.S. guns getting into the hands of criminal organizations, human rights abusers, and terrorist groups around the globe.

WHO'S BEHIND THIS: The NRA and the Newtown-based National Shooting Sports Foundation. Gun sales have fallen in the US, so they want to open up international markets. They are willing to spread our gun violence all over the world to boost gun industry profits.

WHAT YOU CAN DO: Copy this script and click on the links below to paste your comment.

Please submit your comments to both the Department of State and the Department of Commerce Bureau of Industry and Security (you can submit the same comment to each):

State: <https://www.regulations.gov/comment?D=DOS-2017-0046-0001>

Commerce: <https://www.regulations.gov/comment?D=BIS-2017-0004-0001>

COPY SCRIPT: "I oppose moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. These weapons are used in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

Firearms kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. This is the kind of violence that sends refugees fleeing to our borders.

Arms exports must be subject to more controls, not fewer.

Let me know in the comments if you did it, and if it took you more than 30 seconds. Tell your friends. Thank you for your help to make America and our world less violent.

General Comment

As a pastor concerned about reducing violence in the world, I am writing to oppose moving export license oversight for firearms from the Department of State to the Department of Commerce. The proposed rule change treats semiautomatic assault rifles as non-military, yet such firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to rigorous controls.

To: Secretary of Commerce Wilbur Ross

Please reverse the proposed regulations that would weaken end-use controls, enable production of 3D weapons anywhere, make it easier to export semi-automatic weapons and ammunition, and eliminate Congressional oversight of these sales. America is not safer with a heavily armed third world - violence increases in these places, and our borders are flooded with refugees trying to escape the violence. We have also seen the effects of these weapons in U.S. shootings, and know they are used around the world to kill and attack hundreds of people every day in violent crime, wars, and political violence. U.S. export controls for weapons used in violence should be made stronger, not weaker.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Military-style weapons should NOT be available for sale to the general public, of this country or any other country. They most definitely should remain under the control of the US Munitions List.

I oppose the relaxing of rules regarding the export of assault rifles and other arms by U.S. firearm manufacturers, and urge the Commerce and State Departments to oppose these as well. Exporting more arms is not going to help make the world a more peaceful place, especially assault rifles, instead an increased prevalence of firearms simply increases hostilities and leads to more gun related violence and deaths. Exporting an additional 70,000 arms annually will only increase the death toll from 1,000 gun related deaths worldwide every year. This is not something I can support in good conscience.

I see moving this from the Dept of State to the Dept of Commerce as a smart move. As someone who is about to become an FFL/SOT I see no reason to to pay the high registration fee's as i will not be exporting anything and assembling AR15 kits is considered manufacturing. Both activities dont justify itar fees or the complicated compliance. Lets help out small businesses by making this happen.

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries. As a physician, I categorically can state that the harm to human beings is no different between semiautomatic and fully automatic weapons. The energy transferred to the bullet is what is important, along with other characteristics such as yawing of the bullet on impact (tumbling), explosive ammunition, and other such characteristics. The only difference between and automatic weapon and a semiautomatic weapon is that the automatic continues to fire simply by holding the trigger down, whereas the trigger must be pulled for each shot for the semiautomatic. The rest of the mechanical actions involved are the same. They both have high velocity, and characteristics of the ammunition that make them deadly to many, many people over a short period of time. The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls. All of these provisions are DEADLY, and should not be adopted.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not fewer.

General Comment

I oppose moving export license oversight for firearms from the Department of State to the Department of Commerce because, amongst other things, the proposed rule change treats semiautomatic assault rifles as non-military." Firearms kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. This is the kind of violence that sends refugees fleeing to our borders. Arms exports must be subject to more controls, not fewer.

The proposed rule eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

The US has already alienated many of our allies. This rule change adds to the insults already made. Why are there so many immigrants trying to escape gun violence in Central America? More arms to countries like Nicaragua and Honduras will only exacerbate the problem.

General Comment

I am in agreement with the proposed changes, but would like to ask that the subject of temporary export of firearms, specifically vintage shotguns with barrel lengths over 18 to Canada be clearly addressed.

Although there is information addressing the temporary import of firearms, parts, and accessories in to the US it is less clear on temporary exports out of he US.

There is direction provided for a person traveling out of he country to Canada or other countrys that are transporting their firearms with them but, It is next to impossible to navigate through regulations to try and legally (export) ship a vintage sporting shotgun to Canada to have work performed.

There are thousands of collectors such as myself which need a straight forward, easy to understand process that assures us a way to send a vintage post 1890 shotgun temporarily out of the country, have work performed and returned to us. There are companys that you can hire to perform such temporary export/import but it is very expensive and run into thousands of dollars. Further even amongst these companys there are differences in the understanding of the regulations.

I have called and written to ATF concerning the export/import requirements and the short one line response was You should contact the state department about exportation at 202-663-1282.

I have spoken with representatives from the DOC and they have been freindly and helpful. That said I dont feel most individuals such as myself can feel comfortable shipping a firearm and be assured they are following the legal process.

An example of confusion is that the ATF 27 CFR 478.92 calls out a requirement to mark firearms being imported.

Some of the firearms Import companys but not all have interpreted this to mean that even valuable rare vintage firearms must have the importers name and address clearly marked on the shotgun.

This destroys the originality and effects the value of the firearm that was temporarily exported.

There seems to be of no valued reason to mark these firearms.

After all if I was to fly to Canada and take the firearm with me to have the work performed there is no requirement to perform such intrusive markings.

I have attached a picture of a firearm to show the markings I am referring to, clearly a permanent engraving that permanently damaged a historic shotgun of which there was less than 40 made.

I fail to understand the value of marking pre-owned firearms whether temporarily exported/imported or even firearms purchased and exported to the United States which were originally manufactured in the US.

Because shotguns fall under the DOC, the ATF will not clarify the requirement on shotguns it creates confusion. The ATF refers me back to the State Department, and the DOC does not list any requirements. It is important that any markings be clarified by the DOC, if there is no such requirement.

I respectfully request that the temporary export and then reimport of vintage firearms be reviewed specifically as it applies to shotguns.

This would allow many of our collectors and associations of these vintage shotguns a clear procedure in which to utilize the fine craftsman and gunsmiths in Canada for repair, wood and metal work.much of this work a dying art.

Sincerely,
Phil Carr

I believe the USML causes undue financial harm to any small business that wants to perform many of the duties listed. The cost is prohibitive to most people. The ITAR fee is a way of control by finance rather than laws. 99.9% of people will never come close to being an exporter.

Re: ITAR Amendment—Categories I, II, and III DDTC

Greetings:

These are comments on the Department of State's proposed rule to amend the International Traffic in Arms Regulations (ITAR) and categories I, II and III of the US Munitions List (USML). 83 Federal Register 24166, May 24, 2018.

Background

The ITAR amendment should be revised to better support the rule of law.

The Arms Control and Disarmament Act, at 22 USC 2551, declares:

An ultimate goal of the United States is a world ... in which the use of force has been subordinated to the rule of law ...

No profession is more closely identified with the rule of law than the police profession. Peace officers are the street-level keepers of the law, all over the world. If the United States is committed to "subordinating the use of force to the

rule of law”, it must protect the environment in which peace officers do their work. When armed gangs can overpower local peace officers, local communities become war zones where the rule of law is subordinated to the use of force.

We fail to protect peace officers when we put highly destructive weapons in the hands of civilians who target the police.

The ITAR amendment, as proposed, will make it easier to put firearms in the hands of civilians and armed gangs that are superior to those carried by local peace officers, thus threatening the rule of law in local communities. In several parts of the world, armed gangs are impairing the rule of law, and their activities cross borders. Notorious examples of the adverse effects of firearm proliferation can be seen in Africa and the Middle East, as well as closer to home – in Central America and Mexico, with adverse effects along the southern border of the United States.

ITAR should focus more attention on the security needs of local communities where firearms are proposed to be exported.

The Department of State is liberalizing its rules on firearm exports partly because the Department of Defense has determined that so-called semi-automatic firearms are of diminished importance in military conflicts. DoD’s determination may well be valid, but it misses the point. Military analysts worry, as they should, about the impact of weapons on the battlefield. But evaluating the impact of firearms on the battlefield gives short shrift to the security needs of civilian communities. To support the rule of law we must consider the impact of firearms on public safety, peace officer safety, crime control, and the prevention and management of civil disturbances. Firearms that “no longer warrant control” by the military may nonetheless overwhelm police patrols and threaten the rule of law in local communities.

ITAR should not treat the US firearms market as the global standard. The United States is proposing to liberalize its rules on firearm exports grounded partly on the false premise that firearms are “widely available in retail outlets ... abroad.” That is not true. The US firearms market is unique. Mexico, for example, has more restrictive gun laws than the United States.

See: Topher McDougal, David A. Shirk, Robert Muggah and John H. Patterson, “*The Way of the Gun: Estimating Firearms Traffic Across the US-Mexico Border*” (Trans-Border Institute, University of San Diego, March 2013), https://igarape.org.br/wp-content/uploads/2013/03/Paper_The_Way_of_the_Gun_web2.pdf

Zachary Elkins, Tom Ginsburg & James Melton, “*US Gun Rights Truly Are American Exceptionalism*”, (Bloomberg, March 7, 2013), <https://www.bloomberg.com/view/articles/2013-03-07/u-s-gun-rights-truly-are-american-exceptionalism>

The United States risks alienating friendly foreign nations by projecting its permissive domestic gun laws abroad.

The Department of State has access to information about what kinds of weapons are typically carried by patrol officers in foreign countries. The Department has the wherewithal to judge whether a firearm proposed for export is likely to outmatch the firearms carried by local police forces. The Department should use that knowledge -- and make that judgment -- as it evaluates firearm export applications.

In evaluating the suitability of firearm exports, the ITAR should set a maximum limit on the destructive potential of firearms exportable to civilians. Firearms with muzzle energies higher than, for example, 5,000 Joules should be barred from export to non-government end-users. (In ballistics, muzzle energy, commonly expressed in Joules or foot-pounds, is a measure of the destructive potential of a firearm or cartridge.) The risk that a firearm poses to life and property -- and the danger it poses to police officers -- depends rather more on the firearm's destructive potential and rather less on whether the firearm is automatic, semi-automatic, non-automatic, not-fully-automatic, or over- or under .50-caliber.

Highly destructive weapons should be off-limits for export to civilians. Whatever short-term economic benefit those exports may generate is outweighed by the risk those weapons pose to the safety of peace officers and the rule of law. No firearm with a muzzle energy of 5,000 J belongs on a street anywhere in the world.

Policy Recommendations

The following changes should be incorporated in ITAR:

1. Applications for firearm export licenses should be denied when the firearm proposed for export is of such destructive potential as to threaten the safety of local law enforcement officers.
2. Prohibit exports of firearms with muzzle energies less than 5,000 J, to civilian end-users, world-wide, if the firearm is likely to outmatch weapons carried by local peace officers or otherwise impair the efforts of peace officers to control crime and civil disturbance.
3. Prohibit export of firearms with muzzle energies above 5,000 J to civilian end-users world-wide.

Technical Language

The recommendations above may be translated into the ITAR framework using the technical language below.

(1)

22 CFR 120.4

Add a Note 3 to 22 CFR 120.4 as follows:

FOR FIREARMS AND AMMUNITION, PERFORMANCE CAPABILITY INCLUDES DESTRUCTIVE POTENTIAL, AS MEASURED BY MUZZLE ENERGY, COMMONLY EXPRESSED IN JOULES OR FOOT-POUNDS.

(2)

22 CFR 121.1, Category I

Add Note 3 to Category I of 22 CFR 121.1 as follows:

(a) SUBJECT TO (b) AND (c), APPLICATIONS FOR ITEMS CONTROLLED UNDER THIS CATEGORY WILL GENERALLY BE CONSIDERED FAVORABLY ON A CASE-BY-CASE BASIS UNLESS THERE IS CIVIL DISORDER IN THE COUNTRY OR REGION OR UNLESS THERE IS EVIDENCE THAT THE GOVERNMENT OF THE IMPORTING COUNTRY MAY HAVE VIOLATED INTERNATIONALLY RECOGNIZED HUMAN RIGHTS. THE JUDICIOUS USE OF EXPORT CONTROLS IS INTENDED TO DETER THE DEVELOPMENT OF A CONSISTENT PATTERN OF HUMAN RIGHTS ABUSES, DISTANCE THE UNITED STATES FROM

SUCH ABUSES AND AVOID CONTRIBUTING TO CIVIL DISORDER IN A COUNTRY OR REGION.

(b) A LICENSE APPLICATION FOR A FIREARM OR AMMUNITION WITH MUZZLE ENERGY OF 5,000 JOULES (3,688 FOOT-POUNDS) OR MORE, OR ASSOCIATED EQUIPMENT, SHALL BE DENIED TO NON-GOVERNMENT END-USERS.

(c) A FIREARM, AND AMMUNITION, WITH MUZZLE ENERGY LESS THAN 5,000 JOULES (3,688 FOOT-POUNDS), AND ASSOCIATED EQUIPMENT, MAY BE APPROVED TO NON-GOVERNMENT END-USERS UNLESS THE FIREARM WOULD TEND TO OUTMATCH WEAPONS NORMALLY CARRIED BY LAW ENFORCEMENT OFFICERS ON ROUTINE PATROL IN THE AREA WHERE THE WEAPON WOULD BE AUTHORIZED FOR USE OR OTHERWISE IMPAIR THE EFFORTS OF LAW ENFORCEMENT OFFICERS IN THE AREA TO CONTROL CRIME AND CIVIL DISTURBANCE.

(3)

22 CFR 121.1, category II

Add a Note 3 to category II of 22 CFR 121.1, paragraph (a), as follows:

(a) SUBJECT TO (b) AND (c), APPLICATIONS FOR ITEMS CONTROLLED UNDER THIS CATEGORY WILL GENERALLY BE CONSIDERED FAVORABLY ON A CASE-BY-CASE BASIS UNLESS THERE IS CIVIL DISORDER IN THE COUNTRY OR REGION OR UNLESS THERE IS EVIDENCE THAT THE GOVERNMENT OF THE IMPORTING COUNTRY MAY HAVE VIOLATED INTERNATIONALLY

RECOGNIZED HUMAN RIGHTS. THE JUDICIOUS USE OF EXPORT CONTROLS IS INTENDED TO DETER THE DEVELOPMENT OF A CONSISTENT PATTERN OF HUMAN RIGHTS ABUSES, DISTANCE THE UNITED STATES FROM SUCH ABUSES AND AVOID CONTRIBUTING TO CIVIL DISORDER IN A COUNTRY OR REGION.

(b) A LICENSE APPLICATION FOR A FIREARM OR AMMUNITION WITH MUZZLE ENERGY OF 5,000 JOULES (3,688 FOOT-POUNDS) OR MORE, OR ASSOCIATED EQUIPMENT, SHALL BE DENIED TO NON-GOVERNMENT END-USERS.

(c) A FIREARM, AND AMMUNITION, WITH MUZZLE ENERGY LESS THAN 5,000 JOULES (3,688 FOOT-POUNDS), AND ASSOCIATED EQUIPMENT, MAY BE APPROVED TO NON-GOVERNMENT END-USERS UNLESS THE FIREARM WOULD TEND TO OUTMATCH WEAPONS NORMALLY CARRIED BY LAW ENFORCEMENT OFFICERS ON ROUTINE PATROL IN THE AREA WHERE THE WEAPON WOULD BE AUTHORIZED FOR USE OR OTHERWISE IMPAIR THE EFFORTS OF LAW ENFORCEMENT OFFICERS IN THE AREA TO CONTROL CRIME AND CIVIL DISTURBANCE.

(4)

22 CFR 121.1, category III

Add a new paragraph 4 to notes to category III of 22 CFR 121.1, as follows:

(a) SUBJECT TO (b) AND (c), APPLICATIONS FOR ITEMS CONTROLLED UNDER THIS CATEGORY WILL

GENERALLY BE CONSIDERED FAVORABLY ON A CASE-BY-CASE BASIS UNLESS THERE IS CIVIL DISORDER IN THE COUNTRY OR REGION OR UNLESS THERE IS EVIDENCE THAT THE GOVERNMENT OF THE IMPORTING COUNTRY MAY HAVE VIOLATED INTERNATIONALLY RECOGNIZED HUMAN RIGHTS. THE JUDICIOUS USE OF EXPORT CONTROLS IS INTENDED TO DETER THE DEVELOPMENT OF A CONSISTENT PATTERN OF HUMAN RIGHTS ABUSES, DISTANCE THE UNITED STATES FROM SUCH ABUSES AND AVOID CONTRIBUTING TO CIVIL DISORDER IN A COUNTRY OR REGION.

(b) A LICENSE APPLICATION FOR AMMUNITION WITH MUZZLE ENERGY OF 5,000 JOULES (3,688 FOOT-POUNDS) OR MORE, OR ASSOCIATED EQUIPMENT, SHALL BE DENIED TO NON-GOVERNMENT END-USERS.

(c) AMMUNITION, WITH MUZZLE ENERGY LESS THAN 5,000 JOULES (3,688 FOOT-POUNDS) MAY BE APPROVED TO NON-GOVERNMENT END-USERS UNLESS THE FIREARM WOULD TEND TO OUTMATCH WEAPONS NORMALLY CARRIED BY LAW ENFORCEMENT OFFICERS ON ROUTINE PATROL IN THE AREA WHERE THE WEAPON WOULD BE AUTHORIZED FOR USE OR OTHERWISE IMPAIR THE EFFORTS OF LAW ENFORCEMENT OFFICERS IN THE AREA TO CONTROL CRIME AND CIVIL DISTURBANCE.

(5)

15 CFR 124.14 (c) (9)

Amend 15 CFR 124.14 (c) (9) as follows:

(a) Unless the articles covered by the agreement are in fact intended to be distributed to private persons or entities (e.g., cryptographic devices and software for financial and business applications), the following clause must be included in all warehousing and distribution agreements: “Sales or other transfers of the licensed article shall be limited to governments of the countries in the distribution territory and to private entities seeking to procure the licensed article pursuant to a contract with a government within the distribution territory, unless the prior written approval of the U.S. Department of State is obtained.

(b) SUBJECT TO (c) AND (d), APPLICATIONS FOR ITEMS CONTROLLED UNDER THIS CATEGORY WILL GENERALLY BE CONSIDERED FAVORABLY ON A CASE-BY-CASE BASIS UNLESS THERE IS CIVIL DISORDER IN THE COUNTRY OR REGION OR UNLESS THERE IS EVIDENCE THAT THE GOVERNMENT OF THE IMPORTING COUNTRY MAY HAVE VIOLATED INTERNATIONALLY RECOGNIZED HUMAN RIGHTS. THE JUDICIOUS USE OF EXPORT CONTROLS IS INTENDED TO DETER THE DEVELOPMENT OF A CONSISTENT PATTERN OF HUMAN RIGHTS ABUSES, DISTANCE THE UNITED STATES FROM SUCH ABUSES AND AVOID CONTRIBUTING TO CIVIL DISORDER IN A COUNTRY OR REGION.

(c) A LICENSE APPLICATION FOR A FIREARM OR AMMUNITION WITH MUZZLE ENERGY OF 5,000 JOULES (3,688 FOOT-POUNDS) OR MORE, OR ASSOCIATED

EQUIPMENT, SHALL BE DENIED TO NON-GOVERNMENT END-USERS.

(d) A FIREARM, AND AMMUNITION, WITH MUZZLE ENERGY LESS THAN 5,000 JOULES (3,688 FOOT-POUNDS), AND ASSOCIATED EQUIPMENT, MAY BE APPROVED TO NON-GOVERNMENT END-USERS UNLESS THE FIREARM WOULD TEND TO OUTMATCH WEAPONS NORMALLY CARRIED BY LAW ENFORCEMENT OFFICERS ON ROUTINE PATROL IN THE AREA WHERE THE WEAPON WOULD BE AUTHORIZED FOR USE OR OTHERWISE IMPAIR THE EFFORTS OF LAW ENFORCEMENT OFFICERS IN THE AREA TO CONTROL CRIME AND CIVIL DISTURBANCE.

(6)

22 CFR Part 126, Supplement No. 1

In 22 CFR Part 126, Supplement No. 1, category I (a-e) (firearms and related articles), mark all three country boxes with an X.

In 22 CFR Part 126, Supplement No. 1, category II (a) (guns and armament), mark all three country boxes with an X.

In 22 CFR Part 126, Supplement No. 1, category III (ammunition and ordinance), mark all three country boxes with an X.

(7)

22 CFR 129.7 (b)

Amend 22 CFR 129.7 (b) to add the following:

(b) No person may engage in or make a proposal to engage in brokering activities that involve any country, area, or person referred to in § 126.1 of this subchapter without first obtaining the approval of the Directorate of Defense Trade Controls. NO PERSON MAY ENGAGE IN OR MAKE A PROPOSAL TO ENGAGE IN BROKERING ACTIVITIES THAT INVOLVE EXPORTING OR TRANSFERRING, TO A NON-GOVERNMENT PERSON, A FIREARM OR AMMUNITION WITH MUZZLE ENERGY GREATER THAN 5,000 JOULES (3,688 FOOT-POUNDS), OR ASSOCIATED EQUIPMENT. NO PERSON MAY ENGAGE IN OR MAKE A PROPOSAL TO ENGAGE IN BROKERING ACTIVITIES THAT INVOLVE EXPORT OR TRANSFER, TO A NON-GOVERNMENT PERSON, OF A FIREARM OR AMMUNITION WITH MUZZLE ENERGY LESS THAN 5,000 JOULES (3,688 FOOT-POUNDS) OR ASSOCIATED EQUIPMENT IF THE ITEM IS LIKELY TO OUTMATCH LAW ENFORCEMENT OFFICERS ON ROUTINE PATROL IN THE AREA WHERE THE ARTICLE WOULD BE AUTHORIZED FOR USE.

Thank you for the opportunity to submit comments on the ITAR amendment.

Sincerely,

William A. Root
Erick Williams

Re: **Docket No. DOS-2017-0046; RIN 1400-AE30; International Traffic in Arms
Regulations: U.S. Munitions List Categories I, II, and III**

Dear Mr. Monjay:

I am writing on behalf of the National Rifle Association (NRA) to provide the association's comments on the above proposed rule (the proposal). With some six million dues-paying members, the NRA is America's premier defender of the civil right protected by the Second Amendment. Our members include individuals and businesses that would be directly affected by the changes in the proposal, including gunsmiths, firearm instructors, journalists and writers covering firearm technology and development, hunters, competitive shooters, and manufacturers.

The NRA is very pleased to see that the project of Export Reform has finally circled back to the place where it began, with proposed amendments to Categories I, II, and III of the U.S. Munitions List (USML). These were among the first of the changes planned for the large-scale undertaking to update export controls on dual-use items, and rightly so. The Second Amendment protects an individual right to possess and carry firearms in case of confrontation, extending to

arms in common use among the population for lawful purposes.¹ America boasts hundreds of millions of privately-owned firearms² and a robust “gun culture” that has produced countless books, magazine articles, videos, websites, online forums, etc., that exhaustively detail firearm technology and use. It is difficult to imagine any information about the design, development, production, manufacturing, and use of firearms that is not already within the public domain. This same information is commonly available overseas, as are the types of firearms and ammunition the proposal would move off the USML and onto the Commerce Control List (CCL). Meanwhile, the might and sophistication of the U.S. military – as well as America’s armed populace – ensure that no foreign enemy wielding the type of arms at issue in these proposed amendments to the USML could pose a serious threat to this nation’s security.

Of course, movement of commonly-available firearms and ammunition to the CCL would not leave their export unregulated. America already has one of the most well-established and closely-administered systems of regulation for commercial production and distribution of firearms and ammunition in the world, and the proposal would not change that. It is clear from the companion rulemaking published by the Commerce Department that items moving off the USML would remain closely controlled, with the necessity of export licenses remaining the norm. Foreign individuals’ access to firearms and ammunition would also remain regulated under the federal Gun Control Act and the National Firearms Act. Furthermore, the Commerce Department has long regulated exports of various shotguns, as well as their parts, components, accessories, and ammunition. Thus, it has existing knowledge of and relationships with many of the entities the proposal will affect. Those entities, in turn, will also have some familiarity with the Department’s regulatory environment and procedures.

The NRA believes that, on the whole, the proposal correctly balances the imperatives of national and global security, allocation of oversight resources, and promotion of American industry, innovation, and competitiveness. We do, however, think it could be improved in several particulars. We also believe that the timing for the implementation of the rule deserves careful consideration.

Specifically, our concerns involve the following:

- **The retention of firearm sound suppressors on the USML is contrary to the guiding principles of Export Reform and does not serve its purposes.** Suppressors should also be moved to the CCL, unless they are specifically designed for use only with firearms that remain on the USML.

¹ *District of Columbia v. Heller*, 554 U.S. 570, 592, 624-25 (2008). *See also McDonald v. Chicago*, 561 U.S. 742 (2010) (Second Amendment right to keep and bear arms is fully incorporated against state and local action by virtue of the Fourteenth Amendment).

² The Small Arms Survey estimates that as of the end of 2017, there were 121 firearms for every 100 residents in the U.S., for a total of some 393.2 million guns. The program director for the Small Arms Survey Institute notes, however, that “there is no direct correlation at the global level between firearm ownership and violence.” *See* Edith M. Lederer, “Global survey shows more than 1 billion small arms in world, mostly owned by civilians and mostly in the U.S.,” *ChicagoTribune.com*, June 18, 2018, <http://www.chicagotribune.com/news/nationworld/ct-survey-small-arms-world-civilians-20180618-story.html>.

- **The designation of “high capacity magazines” that would remain on the USML is based on an arbitrary number, rather than any qualitative difference in the technology or military character of the item.** The governing consideration should be whether they are specifically designed for use only with firearms that remain on the USML, not their capacity.
- **Where manufacturers and exporters need to implement new compliance procedures for items moving from the USML to the CCL, the final rule should have a delayed implementation date; where requirements that once pertained under the International Traffic in Arms Regulations (ITAR) have no analogues under the Export Administration Regulations (EAR), the changes should take effect immediately.**

For these reasons, and as detailed below, the NRA supports the proposal but advocates for minor revisions before its publication as a final rule.

I. Firearm Sound Suppressors, As Such, Do Not Meet the Prerequisites for Control on the USML Articulated by the Proposal and Therefore Should be Controlled Under the CCL.

As noted in its supplementary information, the proposal is part of a longstanding effort to “revise the U.S. Munitions List so that its scope is limited to those defense articles that provide the United States with a critical military or intelligence advantage or, in the case of weapons, are inherently for military end use.” Whether or not sound suppressors for firearms are characterized as “weapons,” there is no plausible argument that the devices meet these standards.

A firearm sound suppressor is basically a metal cylinder surrounding internal baffles that slow and cool escaping gas to decrease the volume of the firearm’s muzzle report. The devices reduce, but do not eliminate, the sound of gunshots.³ Suppressors have been commercially available since the first decade of the 1900s.⁴ The technology necessary to produce them is simple and well-understood throughout the developed world. Detailed design, development, production, and manufacturing information for firearm sound suppressors is pervasively available in the public domain, including on the Internet.⁵ Similar devices are used to moderate the sound of various other consumer products powered by internal combustion, including automobiles, chainsaws, and lawnmowers.

³ Glenn Kessler, “Are firearms with a silencer ‘quiet’?” WashingtonPost.com, March 20, 2017, https://www.washingtonpost.com/news/fact-checker/wp/2017/03/20/are-firearms-with-a-silencer-quiet/?noredirect=on&utm_term=.301e14951dd4.

⁴ Stephen Halbrook, “Firearm Sound Moderators: Issues of Criminalization and the Second Amendment,” 46 Cumb. L. Rev. 33, 42 (2015).

⁵ A quick web browser search will reveal numerous webpages and videos offering detailed instructions on constructing suppressors of various levels of sophistication, from products produced with lathes and other machine tools to improvised models made from such materials as PVC, flashlight tubes, oil filters, and solvent traps. There’s even a detailed suppressor schematic on the ATF’s own website: <https://www.atf.gov/file/silencer-cut-away>.

Suppressors do not provide the United States with any critical military or intelligence advantage. They are not unique to the United States and are in fact the rare type of firearm-related product that historically has been regulated more closely in this country than in a number of other countries with otherwise relatively strict gun control laws. In some foreign countries, there are no special requirements to acquire or possess firearm suppressors; in certain others, they are presumptively available to those with a firearm license.⁶ Firearm suppressors are already in use by military forces, law enforcement agencies, and civilian firearm owners across the world. Simply put, any country sophisticated enough to produce firearms is sophisticated enough to produce firearm sound suppressors.

Firearm sound suppressors, by themselves, are harmless and cannot accurately be classified as “weapons.” They are only useful when actually attached to a firearm. Even then, they do not make the firearm any more lethal. Their primary advantage is to protect the hearing of the firearm’s user and to decrease the sound signature of firearms so their use is less noticeable and has fewer collateral effects on those in vicinity of the firearm’s discharge.

And even assuming, for the sake of argument, suppressors could be characterized as “weapons,” they are not “inherently military.” Suppressors are regulated and taxed under U.S. law,⁷ but they are readily available to those who are legally eligible to own firearms. They are lawful for private possession in 42 states and may be lawfully used for hunting in 40 states.⁸ Suppressors adorn the firearms of plinkers, hunters, competitors, and law enforcement officers. According to the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), there were 1,297,670 suppressors registered under the National Firearms Act as of February 3, 2017, with nearly 400,000 such registrations occurring in the 12 months preceding that date alone.⁹ As previously mentioned, suppressors are also commonly used by law enforcement agencies and private firearm owners in other countries as well.

In its current form, the proposal does not differentiate between suppressors for use on firearms that would be regulated under the USML and those that would not. This could mean that firearms that would otherwise be regulated under the CCL will remain on the USML because they have integrated suppressors. It could also mean that firearm instructors would have to refrain from allowing suppressors to be used in their classes for fear of providing unauthorized “defense services.” This is contrary to the spirit and intent of Export Reform and does nothing to further U.S. or international security interests.

Given that there is no special military or national security significance to firearm sound suppressors, there is no convincing argument for retaining them on the USML. Like flash suppressors, they should be generally subject to the CCL. If they are going to be retained on the USML at all, it should only be to the extent that they are “specially designed” for the firearms

⁶ 46 Cumb. L. Rev. at 72-4.

⁷ See National Firearms Act, 26 U.S.C. §§ 5801-5872; Gun Control Act, 18 U.S.C. §§ 921-931.

⁸ American Suppressor Association, Education Webpage, <https://americansuppressorassociation.com/education/> (last visited July 6, 2018).

⁹ Stephen Gutowski, “ATF: 1.3 Million Silencers in U.S. Rarely Used I Crimes,” FreeBeacon.com, Feb. 17, 2017, <http://freebeacon.com/issues/atf-despite-nearly-1-3-million-silencers-united-states-rarely-used-crimes/>.

that would also continue to be so controlled. Because that distinction would be difficult to administer as a practical matter, however, the best option is simply to control the general category of firearm sound suppressors under the CCL.

II. The Proposal's Treatment of Magazines is Arbitrary and Capricious.

The proposal treats magazines as “high capacity” and therefore subject to the USML if they have a capacity of greater than 50 rounds, “regardless of jurisdiction of the firearm.” It offers no explanation for this threshold. Whatever the thinking behind it may be, a 51-round magazine provides no greater critical military or intelligence advantage than a magazine of lesser capacity, nor is it any more inherently for military end use.

Magazines, whatever their capacity, are among the most simple and utilitarian of firearm-related items. In typical form, they consist of a metal box or tube with a floor plate that contains a spring with a follower at the top. A firearm that can accept a detachable magazine can accept a magazine of virtually any size. All that is necessary to create a magazine of greater capacity is a longer box and spring. Drum magazines typically utilize a cylindrical chamber and a wound spring or ratcheting mechanism to allow for greater capacity in a more compact unit, but neither configuration uses sophisticated or closely-held technology. Like firearm sound suppressors, technical data for magazines with capacities above and below 51 rounds is available in the public domain, including online, and has been since at least the early 20th Century.¹⁰

United States law does not limit the capacity of magazines for any sort of firearm available to private citizens (a handful of states, however, do impose magazine capacity limits, typically of 10 rounds). Magazines with capacities in excess of 50 rounds are readily available on the commercial market. They are used by practical shooting competitors, as well as by many gun owners who appreciate the versatility and convenience they provide. Even BB guns for the youth market that use springs or compressed air often have reservoirs that hold hundreds of rounds. While these non-powder guns obviously are not and would not be defense articles under the proposal, their capacity demonstrates the fact that marksmen of all types appreciate the ability to operate their guns without frequent reloading.

Demonstrating the arbitrary nature of controlling magazines based on their capacity is the fact that they can easily be clipped, taped, or otherwise attached to one another, with reloads accomplished in mere moments.

As with sound suppressors, it makes no sense that a given curriculum of firearm instruction that would otherwise be uncontrolled under the proposal could potentially be re-characterized as a “defense service” if it happened to involve a “large capacity” magazine.

¹⁰ See, e.g., European Patent Office Patent No. 8172, “A New or Improved Cartridge Magazine for Small Arms and Machine Guns,” Accepted March 6, 1919 (providing detailed specifications for a drum-type magazine), available at <https://worldwide.espacenet.com/publicationDetails/originalDocument?CC=GB&NR=191508172A&KC=A&FT=D&ND=3&date=19190306&DB=EPODOC&locale=en> (last visited July 6, 2018).

For these reasons, we recommend that firearm magazines be controlled under the CCL. If they are controlled under the USML at all, it should only be to the extent they “specially designed” solely for firearms that remain on the USML.

III. The Final Rule Should Take Effect Immediately to the Extent Requirements Are Eliminated and Phase in Other Changes to Allow Regulated Entities Time to Adapt.

When the final rule governing Categories I, II, and III of the USML is published, certain changes should take effect immediately, while others should be phased in to allow regulated entities time to adapt.

Changes that merely eliminate requirements altogether should take effect immediately. For example, there is no justification for continuing to make “manufacturers” of articles that would be moved off the USML register with the Department of State.

On the other hand, where control of an item changes from the USML to the CCL, necessitating new procedures by the regulated entity, implementation of the final rule’s effective date should be delayed to allow for new compliance systems to be established.

Licenses granted under the ITAR should also be grandfathered for all outstanding transactions.

The NRA does not have any specific recommendations for a timeline of implementation for enforcing new requirements and procedures. We will defer to the entities whose day-to-day operations will be directly affected by the changes in the final rule.

Conclusion

The NRA is very pleased to see Export Reform finally turn its attention to Categories I, II, and III of the USML. The proposal charts a positive course that will contribute to national security, enhance the competitiveness of U.S. businesses, and benefit ordinary gun owners by mitigating the potential for the ITAR to burden innocent conduct that does not implicate national security. We hope you will take the suggestions offered herein seriously to further promote the worthy goals of this effort, and we appreciate the opportunity to provide input.

We have also included our submission on the Bureau of Industry and Security’s companion rulemaking and incorporate those comments herein by this reference.

Sincerely,

Christopher Zealand

Re: **Docket No. BIS-2017-0004; RIN 0694-AF47; Control of Firearms, Guns,
Ammunition and Related Articles the President Determines No Longer Warrant
Control Under the United States Munitions List (USML)**

Greetings:

I am writing on behalf of the National Rifle Association (NRA) to provide the association's comments on the above proposed rule (the proposal). With some six million dues-paying members, the NRA is America's premier defender of the civil right protected by the Second Amendment. Our members include individuals and businesses that would be directly affected by the changes in the proposal, including gunsmiths, firearm instructors, journalists and writers covering firearm technology and development, hunters, competitive shooters, and manufacturers.

The NRA is very pleased to see that the project of Export Reform has finally circled back to the place where it began, with proposed amendments to Categories I, II, and III of the U.S. Munitions List (USML). These were among the first of the changes planned for the large-scale undertaking to update export controls on dual-use items, and rightly so. The Second Amendment protects an individual right to possess and carry firearms in case of confrontation, extending to

arms in common use among the population for lawful purposes.¹ America boasts hundreds of millions of privately-owned firearms² and a robust “gun culture” that has produced countless books, magazine articles, videos, websites, online forums, etc., that exhaustively detail firearm technology and use. It is difficult to imagine any information about the design, development, production, manufacturing, and use of firearms that is not already within the public domain. This same information is commonly available overseas, as are the types of firearms and ammunition the proposal would regulate under the Commerce Control List (CCL). Meanwhile, the might and sophistication of the U.S. military – as well as America’s armed populace – ensure that no foreign enemy wielding the types of arms at issue in these proposed regulations could pose a serious threat to this nation’s security.

Of course, movement of commonly-available firearms and ammunition to the CCL would not leave their export unregulated. America already has one of the most well-established and closely-administered systems of regulation for commercial production and distribution of firearms and ammunition in the world, and the proposal would not change that. It is clear from the proposal that items moving off the USML would remain closely controlled, with the necessity of export licenses remaining the norm. Foreign individuals’ access to firearms and ammunition would also remain regulated under the federal Gun Control Act and the National Firearms Act. Furthermore, the Commerce Department has long regulated exports of various shotguns, as well as their parts, components, accessories, and ammunition. Thus, it has existing knowledge of and relationships with many of the entities the proposal will affect. Those entities, in turn, will also have some familiarity with the Department’s regulatory environment and procedures.

The NRA believes that, on the whole, the proposal correctly balances the imperatives of national and global security, allocation of oversight resources, and promotion of American industry, innovation, and competitiveness. We do, however, think that it could be improved in several particulars. We also believe that the timing for the implementation of the rule deserves careful consideration.

Specifically, our concerns involve the following:

- **§ 740.9 Temporary imports, exports, reexports, and transfers (in-country) (TMP) and § 758.10 Entry clearance requirements for temporary imports – The use of the Automated Export System (AES) is impractical and inappropriate for private travelers exporting a personal firearm they temporarily imported into the U.S. for**

¹ *District of Columbia v. Heller*, 554 U.S. 570, 592, 624-25 (2008). See also *McDonald v. Chicago*, 561 U.S. 742 (2010) (Second Amendment right to keep and bear arms is fully incorporated against state and local action by virtue of the Fourteenth Amendment).

² The Small Arms Survey estimates that as of the end of 2017, there were 121 firearms for every 100 residents in the U.S., for a total of some 393.2 million guns. The program director for the Small Arms Survey Institute notes, however, that “there is no direct correlation at the global level between firearm ownership and violence.” See Edith M. Lederer, “Global survey shows more than 1 billion small arms in world, mostly owned by civilians and mostly in the U.S.,” *ChicagoTribune.com*, June 18, 2018, <http://www.chicagotribune.com/news/nationworld/ct-survey-small-arms-world-civilians-20180618-story.html>.

lawful purposes. The current system, which relies upon the ATF Form 6NLA, should be maintained without modification for such persons.

- **§ 740.14 Baggage (BAG) and § 758.1 The Electronic Export Enforcement (EEI) filing to the Automated Export System (AES) – The use of the AES is impractical and inappropriate for private travelers temporarily exporting a personal firearm for lawful purposes.** The current system, which relies upon the CBP Form 4457, should be maintained without modification for such persons until such time as U.S. Customs and Border Protection engages in a public rulemaking process to resolve the current problems.
- **§ 758.1 The Electronic Export Enforcement (EEI) filing to the Automated Export System (AES) and § 762.2 Records to be retained – Expanding the data elements necessary for AES filings would exacerbate the problems for private travelers temporarily exporting a personal firearm and violate the spirit of Congressional prohibitions against federal firearm registries.** Private travelers temporarily exporting personal firearms should continue to be able to use the CPB Form 4457 without the firearm's information being captured by a federal database.
- **Where manufacturers and exporters need to implement news compliance procedures for items moving from the USML to the CCL, the final rule should have a delayed implementation date; where requirements that once pertained under the International Traffic in Arms Regulations (ITAR) have no analogues under the Export Administration Regulations (EAR), the changes should take effect immediately.**

For these reasons, and as detailed below, the NRA supports the proposal but advocates for revisions before its publication as a final rule.

I. The AES System is Impractical and Inappropriate for Use by Private Travelers.

- A. The AES requirement was introduced without sufficient or accurate notice to the public.

The International Traffic in Arms Regulations historically had included an exemption under 22 CFR §123.17(c) that allowed U.S. persons to temporarily export without a license up to three nonautomatic firearms and not more than 1,000 cartridges therefor. This exemption was geared toward hunters, sportsmen, competitors, and others who travel overseas with firearms to be used for sporting and other lawful purposes.

In 2011, DDTC published a Federal Register notice of proposed rulemaking entitled International Traffic in Arms Regulations: Exemption for Temporary Export of Chemical Agent Protective Gear.³ The supplementary information to that rulemaking focused on amendments to 22 CFR §123.17 pertaining to “the temporary export of chemical agent protective gear for

³ 76 Fed. Reg. 16353 (March 23, 2011).

exclusive personal use” It also mentioned that “an exemption for firearms and ammunition is clarified by removing certain extraneous language that does not change the meaning of the exemption.”⁴

In fact, the proposed change to the firearms and ammunition exemption was a material and substantial change to the status quo. It would require for the first time that “the individual must ... present the Internal Transaction Number (ITN) from submission of the Electronic Export Information in the Automated Export System per § 123.22(b)” to use the exemption.⁵

But because the notice only printed the amendments to 22 CFR §123.17 and omitted the existing text of that section, it was not clear from the face of that notice what the context of this new requirement was. The notice’s inaccurate portrayal of the change as a mere “clarification” further contributed to obscuring the significance of this new language. Thus, the new requirement for temporary firearms and ammunition exports went largely unnoticed by relevant stakeholders.

The final rule was published on May 2, 2012.⁶ Its supplementary information included a similarly inaccurate description of the firearm exemption amendment. “Section (c)(3) is revised to remove what is in practice extraneous language,” it stated.⁷ “Subject to the requirements of (c)(1)–(3), the exemption applies to all eligible individuals (with the noted exceptions). Thus, while the text is revised, the meaning of (c)(3) is not changed.”⁸

Unlike the notice for the proposed rule, however, the notice of the final rule included the full text of subsection (c), which made clear the AES filing requirement pertained to those claiming the licensing exemption for temporary firearm and ammunition exports. Of course, it was by then too late for stakeholders to object to these changes, as the rule had been finalized.

For three years, the changes to 22 CFR §123.17 as they pertained to temporary firearm and ammunition exports appeared to be ignored and unenforced by the federal government. Then, in 2015, U.S. Immigration and Customs Enforcement (ICE) and U.S. Customs and Border Protection (CBP) suddenly changed their websites to indicate the AES filing requirements would be enforced against travelers temporarily exporting firearms and ammunition, with penalties that could include seizure of improperly declared items and criminal prosecution.⁹

⁹ See NRA-ILA, “Rule Change May Devastate International Travel for Hunters and Shooters,” <https://www.nra.org/articles/20150320/rule-change-may-devastate-international-travel-for-hunters-and-shooters> (March 20, 2015).

B. The AES was not designed for use by private persons for non-business purposes.

The AES was designed around the needs of commercial exporters and government officials, not private travelers. As CBP's "Introduction" to the AES states:

During AES development, a Trade Resource Group convened regularly. To ensure that all voices were heard, the group was comprised of large and small exporters, carriers, freight forwarders, port authorities, and non-vessel operating common carriers (NVOCC). At the trade's request, separate coalitions for exporters and software vendors were formed.^[10]

It continues, "Whatever aspect of the export community you represent - exporter, carrier, freight forwarder, port authority, service center, non-vessel operating common carrier, consolidator - AES has advantages for you."¹¹ Nowhere does this summary recognize that private individuals would also have to navigate a system designed by and for industry compliance specialists.

Individuals attempting to use the AES will need to have compatible hardware and software systems or to enlist the services of an authorized agent. Those who do not wish to purchase or write their own software, or hire someone to complete the filing process for them, have the option of using AESDirect, an online version administered by the U.S. Census Bureau.

That agency, in turn, has a webpage with various resources to acquaint users with the intricacies of the system.¹² Browsers can start, for example, with the 39-page *AESDirect User Guide*¹³ or with any of the one-hour-plus webinars that cover various aspects of the system.

Navigating the filing process requires individuals to create an account and then fill in data fields with various codes that are neither intuitive nor easily reconcilable with the context of an individual traveling with his or her own private property. For example, the system requires the parties to an export to be identified, with required fields that include the U.S. Principal Party in Interest, which must be identified by "Company Name" and an acceptable ID type. Likewise, the Ultimate Consignee also must be specified, again with reference to "Company Name" and an authorized form of identification.

Nowhere does the User Guide or the screens of the system itself explain how these categories are supposed to translate for private individuals declaring temporary exports of their

¹² U.S. Census Bureau, "ACE AESDirect - Resources," https://www.census.gov/foreign-trade/aes/aesdirect/transitiontoace.html?cm1=gd&utm_medium=email&utm_source=govdelivery (last visited July 6, 2018).

¹³ Available at <https://www.census.gov/foreign-trade/aes/aesdirect/AESDirect-User-Guide.pdf> (last visited July 6, 2018).

own property. Such persons are not just an afterthought in the system's design. Rather, it appears that the design has not thought of them at all.

The acceptable forms of identification, for example, are an Employer Identification Number (EIN), a Dun and Bradstreet Number, or a foreign passport number (if the foreign entity is in the U.S. at the time the goods are purchased or obtained for export). U.S. individuals making temporary exports cannot use their own passport numbers, nor can they use their Social Security numbers.¹⁴

Using AESDirect, moreover, requires an individual to apply for an account with the Secure Data Portal of the Automated Commercial Environment. The application for an ACE Exporter Account¹⁵ requires users to list "Corporate Information," including an EIN and Company Name.

The Internal Revenue Service (IRS) is responsible for issuing EINs. The IRS website that explains the process for applying online clearly states: "Employer Identification Numbers are issued for the purpose of tax administration and are not intended for participation in any other activities."¹⁶ The online application requires the applicant to identify the "legal structure" associated with the EIN. None of the available options corresponds with a private individual who simply wishes to make an AES filing. The applicant then must specify why he or she is requesting an EIN, with the limited menu choices again offering no option for the private AES filer. Finally, the applicant must certify under penalties of perjury that he or she has "examined this application, and to the best of my knowledge and belief, it is true, correct, and complete."¹⁷

Private individuals using the online application form, in other words, must make a false certification to the IRS about their business need for an EIN as a prerequisite to complying with the legally-mandated AES filing requirement. These individuals are also potentially creating an expectation with the IRS that they are creating a business that should have associated tax filings.

C. The relevant agencies have been aware of the problems private individuals have using the AES, and there has been no apparent progress in resolving them.

In 2015, representatives of the NRA – as well as representatives of hunting and firearm industry associations – met with officials from CBP, the Census Bureau, the Department of

¹⁶ IRS, "Apply for an Employer Identification Number (EIN) Online," <https://www.irs.gov/businesses/small-businesses-self-employed/apply-for-an-employer-identification-number-ein-online> (last visited July 6, 2018).

¹⁷ See IRS Form SS-4, available at <https://www.irs.gov/pub/irs-pdf/ss4.pdf> (last visited July 6, 2018). Note the PDF of the SS-4 has options for "Other (specify)" not available on the IRS's online application form. It does not, however, indicate that EINs may be obtained solely for AES filing purposes.

Homeland Security (DHS), and ICE to discuss the above problems.¹⁸ These discussions emphasized the need for a simple, straightforward, and legal means for private travelers to comply with their AES filing requirements. The discussions also touched on concerns about creating a federal firearm registry via AES filings (a topic that is explored below in greater depth).

Shortly after that meeting, and after additional intervention from members of Congress, CBP announced that it would return to the status quo practice of using the paper CBP Form 4457 to track firearms for temporary export.¹⁹ In this procedure, travelers report to a CBP office during their trip or beforehand at a Port of Entry and present the firearms (and ammunition, if applicable) to be recorded on the 4457. Upon return to the U.S., the traveler will declare the property, which can be checked, if necessary, against the 4457 to ensure the same firearms that left the country have returned. The ATF has also indicated that this procedure will satisfy the re-importation of firearms under its importation jurisdiction.²⁰

We understand that this remains the procedure for temporary firearm exports by private travelers to the present day and that the AES filing requirement is not being enforced against these individuals.

Between 2015 and the present, NRA representatives have had repeated contacts with officials from CBP and the Census Bureau to inquire about any changes or updates to the above-described state of affairs. To date, we have neither seen nor heard of any evidence that the AES system has been in any way modified to alleviate the problems it presents for private travelers. Our review of the applicable websites during the preparation of these comments confirms this impression. The AES remains a complex application geared toward the needs of industry and government, not private persons traveling with their own property for non-business purposes.

- D. BIS should omit the AES filing requirement for private persons temporarily exporting their own firearms and ammunition for lawful purposes and codify the Form 4457 procedure.

The NRA is pleased to see that BIS' current proposal is handling the AES issue in a much more transparent and forthright manner than the 2012 DDTC rulemaking that introduced it in the first place. The background information included with the proposal acknowledges:

BIS is aware that U.S. Customs and Border Protection (CBP) has temporarily suspended the requirement to file EEI to the AES for personally-owned firearms and ammunition that are "subject to the ITAR" being exported under 22 CFR 123.17(c), due to

¹⁸ See NRA-ILA, "You Can't Get There from Here: Obama Administration Shrugs Off Woes of International Travelers," <https://www.nra-ila.org/articles/20150417/you-cant-get-there-from-here-obama-administration-shrugs-off-woes-of-international-travelers> (April 17, 2015).

¹⁹ See, e.g., P.J. Reilly, "U.S. Government withdraws confusing new gun rules for traveling hunters," LancasterOnline, April 27, 2015, https://lancasteronline.com/news/local/u-s-government-withdraws-confusing-new-gun-rules-for-traveling/article_e2991fcc-ecce-11e4-8e21-3b622f277d23.html.

²⁰ See 27 C.F.R. § 478.115(a).

operational challenges related to implementation. ... Whether and how BIS includes this requirement in a final rule would be based on whether CBP is able to update its processes, and other agencies as needed, to allow for individuals to easily file EEI in AES by the time a final rule is published. If CBP is not able to do so, then the final rule may direct exporters to continue to use CBP's existing process, which is the use of the CBP Certification of Registration Form 4457, until a workable solution is developed or CBP suggests an alternative simplified solution for gathering such information for temporary exports of personally-owned firearms and ammunition.

As explained above, the CBP and the other relevant agencies have not updated their processes to allow for individuals to easily file Electronic Export Information in the AES. Given that they are aware of the issues, have had more than three years to fix them, and have made no discernable progress in that direction, there is no reason to believe they will do so by the time the proposal is published as a final rule.

The NRA is unaware of any compelling security need to change the status quo. The very fact that the systems have not been updated to address the outstanding issues would seem to indicate CBP and DHS agree. Simply put, there has been no urgency to facilitate AES filings by private travelers. The Form 4457 procedure has proven to be a workable system both before and since the 2012 rule change, and it can continue to suffice for the near term.

The paper Form 4457 also serves an important function for some U.S. travelers to foreign countries that require a valid "firearm license" from visitors' home countries. Neither the U.S. government nor most U.S. states generally license the acquisition or simple possession of firearms, especially long guns. But foreign officials in these countries have historically accepted the Form 4457 as fulfilling this requirement.

It is also relevant that BIS has throughout the relevant time period always allowed for the temporary export of shotguns and shotgun shells under its jurisdiction via the baggage exemption of 15 C.F.R. § 740.14 without requiring a declaration to be filed in the AES. Indeed, that exemption currently does not specifically require the use of the Form 4457 procedure, either. Codifying the Form 4457 procedure would therefore help promote consistency and understanding across the different agencies involved in enforcing the nation's export rules and with the traveling public. The president's determination that certain additional firearms and ammunition no longer warrant control under the USML more strongly argues in favor of BIS adopting its own procedures for their temporary export than for importing procedures from the ITAR into the EAR.

CBP can also issue its own rulemaking on procedures for temporary exports by private travelers, should the state of play change with respect to the practical and technological issues of the AES. The issue could then be fully vetted in its own right. There is no reason, however, to inject this thorny issue into the larger project of Export Reform. It is not necessary nor helpful to the objectives of Export Reform, and it would perpetuate a problem one solution to which has already been identified (i.e., the paper Form 4457 procedure).

- E. Private travelers exporting a personal firearm they temporarily imported into the U.S. for lawful purposes should not be required to use AES for this purpose.

The same problems that arise from requiring U.S. persons to file declarations through the AES to take advantage of the BAG exemption apply to requiring foreign visitors traveling to the U.S. with their own firearms to use the AES to avail themselves of the TMP exception. This is not necessary under the current version of 15 C.F.R. § 740.9, and it should not be added to that section or to § 758.1.

Currently, foreign visitors traveling to the U.S. with their own firearms must apply for an import permit from the Bureau of Alcohol, Tobacco, Firearms & Explosives using ATF Form 6NIA. The individual will also have to substantiate his or her eligibility to possess a firearm in the United States as a non-U.S. person (for example, by obtaining a hunting license from a U.S. state). The travelers must then declare their firearms at the border, provide CBP officials with any required documents, and maintain the required documents during the duration of their stay. Customs officials in the country of re-importation can use the ATF Form 6NIA to confirm that the individual is returning with the same firearms that were brought to the U.S.

We are unaware of any attempt on DDTC's part to enforce a requirement that foreign visitors (including from Canada) declare the "export" of firearms they temporary brought to the U.S. for lawful purposes through the AES when the visitor returns home. Indeed, it is difficult to understand how doing so would contribute to national security. Thanks the Second Amendment and America's unique commitment to individual liberty, the U.S. has by far the largest civilian stock of firearms in the world.²¹ Given the ready availability of firearms in the U.S. as compared to the rest of the world, there is little chance that America's interests are seriously threatened by foreign visitors bringing their own lawfully obtained guns into the country. At the very least, they are not threatened enough to impose a bureaucratic requirement for private foreign travelers that has already proven unworkable for their U.S. counterparts.

For these reasons, we urge BIS to omit from §§ 740.2 and 758. 10 the AES declaration requirement as applied to private foreign travelers temporarily bringing personal firearms into the U.S. Foreign hunters and competitive shooters help contribute to the U.S. economy, and these proposed changes would discourage them from doing so. Meanwhile, reports of foreign travelers committing crimes in the U.S. with firearms they lawfully brought with them are vanishingly rare.

II. The expanded data elements necessary for AES filings exacerbate the problems for private travelers forced to use the system and violate the spirit of Congressional prohibitions against federal firearm registries.

The proposal would "expand the data elements required as part of an AES filing for [firearms transferred from the USML] to include serial numbers, make, model and caliber," including for those wishing to use the BAG and TMP exemptions. This makes the previously mentioned problems with AES filing that much worse. It also runs counter to the spirit of clearly

²¹ Lederer, *supra* note 2.

established Congressional policy against using bureaucratic record-keeping requirements to establish firearms registries.

Firearm registries have long been anathema to gun owners as a tool that can be used to target them for discrimination and for the eventual seizure of their firearms. History is rife with examples of tyrants who used civilian disarmament to further their despotic ends,²² and America's own Revolutionary War began in earnest after a British raid on Colonial arms caches. Against this backdrop, federal gun control laws have consistently maintained a policy against national registries of the sorts of common arms with which Americans typically exercise their Second Amendment rights.²³

Congress, in enacting the Gun Control Act of 1968 (GCA), specifically declined to create a federal firearm registry, despite the urging of President Lyndon B. Johnson to do so.²⁴ Both the House and the Senate voted down proposals to require registration of guns as the legislation made its way through Congress.²⁵ As Sen. James McClure later stated,

The central compromise of the Gun Control Act of 1968—the sine qua non for the entry of the Federal Government into any form of firearms regulation was this: Records concerning gun ownership would be maintained by dealers, not by the Federal Government and not by State and local governments.^[26]

Congress then amended the GCA in 1986 to prohibit any rule or regulation enacted under its auspices from using the records that federal firearm licensees must keep to establish “any system of registration of firearms, firearms owners, or firearms transactions or dispositions ...”²⁷

When the Brady Handgun Violence Protection Act of 1993²⁸ created the authority for the National Instant Criminal Background Check System (NICS), Congress took pains to ensure the system would not circumvent the GCA's policy against firearm registration. The Act states that if the NICS determines receipt of a firearm would not be in violation of law, it shall “destroy all records of the system with respect to the call (other than the identifying number and the date the

²² See, e.g., STEPHEN HALBROOK, GUN CONTROL IN THE THIRD REICH, DISARMING THE JEWS AND “ENEMIES OF THE STATE” (Independent Inst. 2013).

²³ The National Firearms Act, 26 U.S.C. §§ 5801-5872, requires federal registration of limited categories of arms, but to the extent it covers firearms, those guns— which include machineguns, short-barreled shotguns, short-barreled rifles, and non-sporting firearms greater than .50 caliber – are comparatively rare among the U.S. civilian firearm stock.

²⁴ See Lyndon B. Johnson, “Remarks Upon Signing the Gun Control Act of 1968,” Oct. 22, 1968, available at <http://www.presidency.ucsb.edu/ws/?pid=29197> (last visited July 6, 2018).

²⁵ 114 Cong. Rec. H22267 (daily ed. July 19, 1968); 114 Cong. Rec. S27420-421 (daily ed. Sept. 18, 1968).

²⁶ 131 Cong. Rec. S9163-64 (July 9, 1985).

²⁷ 18 U.S.C. § 926(a).

²⁸ Pub. L. No. 103-159, 107 Stat. 1536 (1993).

number was assigned) and all records of the system relating to the person or the transfer.”²⁹ Section 103(i) of the Act contains additional prohibitions against the use of the system to create a federal firearms registry:

No department, agency, officer, or employee of the United States may—

(1) require that any record or portion thereof generated by the system established under this section may be recorded at or transferred to a facility owned, managed, or controlled by the United States or any State or political subdivision thereof; or

(2) use the system established under this section to establish any system for the registration of firearms, firearm owners, or firearm transactions or dispositions except with respect to person, prohibited by section 922 (g) or (n) of title 18, United States Code State law, from receiving a firearm.^[30]

Beginning in 1979, the annual appropriations bills that funded the ATF and its predecessor agency prohibited the Department of Justice from centralizing the records of federal firearm licensees (FFLs), until the prohibition was made permanent in 2011.³¹ Also made permanent in that 2011 appropriations bill was another rider that prohibited the ATF from compiling a searchable registry of gun buyers’ names from business records transferred to the agency by FFLs who ceased doing business.³² A third provision in the same bill permanently created a 24-hour deadline for the destruction of identifying information on those who successfully undergo a NICS check.³³

Even Obamacare contains a number of provisions that prohibit information collected under its authority from being used to create firearm registries.³⁴

Meanwhile, there is no express authority in the enabling act under which this rulemaking is promulgated for BIS to collect and retain detailed information on the firearms owned by law-abiding Americans. Yet BIS is proposing to compel Americans to enter identifying information about themselves and their firearms into a federal database as a precondition of engaging in lawful travel with firearms. Individuals forced to comply with this requirement are given no assurances about how the information will be retained or protected or whether it will be available to other entities, and if so, under what circumstances. This clearly runs contrary to the spirit of congressional policy governing the handling of firearm owner information.

³² 125 Stat. 552, 610.

³³ *Id.* at 632.

³⁴ Patient Protection and Affordable Care Act, Pub. L. No. 111-148, 124 Stat. 119, 884-5 (2010).

The *de facto* federal firearm registry that would be created by forcing private gun owners to make detailed declarations about themselves and their firearms via the AES is another argument in favor of retaining the current procedure utilizing the paper Form 4457. That procedure vindicates the government's legitimate interest in monitoring the firearms that move and in out of the country but does not require the government to maintain a central registry of firearm owner information.

Going forward, any further attempt to automate the information private travelers must provide about their personal firearms should include express privacy provisions. At a minimum, these should prevent the dissemination or transfer of the information to other entities and require its complete destruction once CBP has verified that the firearms which were temporarily exported have been returned to the U.S.

For all these reasons, the NRA objects to the proposal's use of expanded data elements for private travelers seeking to utilize the BAG or TMP exceptions and urges that those requirements be omitted from the final rule.

III. The Final Rule Should Take Effect Immediately to the Extent Requirements Are Eliminated and Phase in Other Changes to Allow Regulated Entities Time to Adapt.

When the final rule governing Categories I, II, and III of the USML is published, certain changes should take effect immediately, while others should be phased in to allow regulated entities time to adapt.

Changes that merely eliminate requirements altogether should take effect immediately. For example, there is no justification for continuing to make "manufacturers" of articles that would be moved off the USML register with the Department of State.

On the other hand, where control of an item changes from the USML to the CCL, necessitating new procedures by the regulated entity, implementation of the final rule's effective date should be delayed to allow for new compliance systems to be established.

Licenses already granted under the ITAR should also be grandfathered for all outstanding transactions.

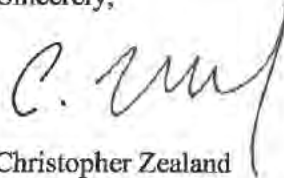

The NRA does not have any specific recommendations for a timeline of implementation for enforcing new requirements and procedures. We will defer to the entities whose day-to-day operations will be directly affected by the changes in the final rule.

Conclusion

The NRA is very pleased to see Export Reform finally turn its attention to Categories I, II, and III of the USML. The proposal charts a positive course that will contribute to national security, enhance the competitiveness of U.S. businesses, and benefit ordinary gun owners by mitigating the potential for export regulations to burden innocent conduct that does not implicate national security. We hope you will take the suggestions offered herein seriously to further promote the worthy goals of this effort, and we appreciate the opportunity to provide input.

We have also included our submission on the Directorate of Defense Trade Control's companion rulemaking and incorporate those comments herein by this reference.

Sincerely,

A handwritten signature in black ink, appearing to read "C. Zealand", with a stylized flourish extending from the end.

Christopher Zealand
Senior Research Attorney

Richard E. Ashooh
Assistant Secretary for Export Administration
Bureau of Industry and Security
U.S. Department of Commerce
14th and Pennsylvania Avenue NW
Room 2099B
Washington, D.C. 20230

ATTN: Request for Comments Regarding Reform of USML Categories I, II, and III,
Docket No. 111227796-5786-01, RIN 0694-AF47, 83 FR 24166

Dear Mr. Ashoosh:

Esterline Technologies Corporation supports the goals and objectives of the Export Control Reform (ECR) Initiative, and submits the following comments respecting the proposed transfer of items from Categories I, II, and III from the USML to the CCL, with focus on the appropriateness of the corresponding license requirements and licensing policies.

Summary of Comments and Recommendations

This section outlines our main comments, each of which is explained more fully in the remainder of this letter.

1. Keep the Commerce Control List free of AECA brokering.
2. Coordinate changes to USML Categories I, II, and III with changes to the United States Munitions Import List.
3. Address conflict with companion rule 83 FR 24198.

Comments and Recommendations

1. Keep CCL free of AECA brokering

One of the main advantages of ECR is that items on the CCL are not subject to the brokering requirements in section 38(a)(1) of the Arms Export Control Act (AECA) and 22 CFR 129. This advantage has been highlighted by the U.S. Government in public

remarks, such as Under Secretary Hirschorn's address to the BIS Update 2014 Conference.

Absence of brokering controls for CCL items has more significance than the absence of double licensing. Currently, items subject to the CCL do not require registration or licensing under 22 CFR 129, period. Once an item is determined to be on the CCL, it is clear that it is not subject to brokering, so there is no need to review the USMIL or the requirements in 22 CFR 129 before engaging in business. Knowledge that items on the CCL are not subject to brokering simplifies and streamlines transactions. Addition of brokering requirements for any item on the CCL would be an unwelcome development as it would introduce a significant complicating factor.

Esterline recommends BIS and DDTC reform USML Categories I, II, and III without introducing brokering controls to items in the CCL.

2. Coordinate changes to USML Categories I, II, and III with USMIL

The proposed rule would add the need to review the USMIL for activities that are not imports to the United States and involve items on the CCL. Classifying items against multiple control lists for a single transaction increases the cost and complexity of U.S. export controls.

Esterline recommends BIS and DDTC coordinate the change to USML Categories I, II, and III with the Bureau of Alcohol, Tobacco, Firearms, and Explosives so that a corresponding change is made to the USMIL at the same time. This would eliminate the need to consider both the USML and the USMIL when deciding whether a transaction involves brokering.

3. Address conflict with companion rule 83 FR 24198

The proposed rule is in conflict with the companion State Department proposed rule, 83 FR 24198, Public Notice 10094, RIN 1400-AE30. This leaves items transferred from the USML to the CCL potentially without a controlling ECCN.

Esterline recommends BIS coordinate with DDTC to resolve this conflict.

The BIS proposed rule states:

Category III of the USML, entitled "Ammunition/Ordinance," encompasses ammunition for a wide variety of firearms that may have military, law enforcement or civilian applications. Ammunition that has only or primarily military applications would remain on the USML as would parts, production equipment, "software" and "technology" therefor.

The State Department proposed rule states with respect to USML Category III:

Additionally, paragraph (c), which controls production equipment and tooling, will be removed and placed into reserve. The articles currently covered by this paragraph will be subject to the EAR.

In effect, the BIS proposed would receive specific production and test equipment for conventional ammunition into ECCN 0B505, while the State Department proposed rule would move all production and test equipment for ammunition and ordnance to the CCL, conventional or otherwise.

ECCN 0B505 would only control equipment specially designed for the production of ammunition and ordnance that is controlled in USML Category III if it falls within the list "tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment." This list is less than the scope of production equipment that will no longer be controlled in USML Category VIII(c) by the proposed companion rule, 83 FR 24198.

Similarly, ECCN 0E505 would not control technology for the technology for equipment specially designed for the production of ordnance, or technology for the software specially designed for such equipment.

A number of the articles proposed for USML Category III by 83 FR 24198 are not conventional ammunition, and their specially designed production equipment exceeds the specific list "tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment."

For example, production of combustible ordnance requires specialized production machines that do not fall within the list "tooling, templates, jigs, mandrels, molds, dies, fixtures, alignment mechanisms, and test equipment." Under the proposed rules, these specialized machines would fall outside both the USML and ECCN 0B505.

Summary

Thank you for the opportunity to comment on this proposed rule. Please feel free to contact me if you have any questions about the comments and recommendations provided.

Regards,

Richard R. Baldwin

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of Commerce. The proposed rule treats dangerous semiautomatic assault rifles as non-military devices. These rifles should certainly be treated as military devices. Assault rifles originated in World War II and have become standard weapons for armies throughout the world. To not classify these weapons as military devices is absurd. Additionally, the proposed rule eliminates Congressional oversight for gun export deals. Since these devices are proven to be dangerous, it is common sense that there should be Congressional oversight with gun exportations. In modern times, assault rifles have been the cause of violent and deadly crimes. As a result, there should be more congressional oversight and regulations, not fewer.

To all the Trump administration haters out there, I urge you to please check your history before you comment. The Obama administration initially proposed this reform initiative in 2009 and again in 2013. Both times it was withdrawn because of events unrelated to the proposed change. I support this change.

REFERENCE: Comments on Proposed Rule – Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML) -- RIN 0694-AF47

Dear Mr. Clagett:

The Sporting Arms and Ammunition Manufacturers' Institute (SAAMI) respectfully submits the following comments to the above referenced Federal Register Notice 83 FR 24166, dated May 24, 2018. SAAMI is an association of the nation's leading manufacturers of firearms, ammunition and components. SAAMI was founded in 1926 at the request of the federal government and tasked with creating and publishing industry standards for safety, interchangeability, reliability and quality, coordinating technical data and promoting safe and responsible firearms use.

As the organization responsible for creating manufacturing standards for our industry, SAAMI is uniquely qualified to provide technical expertise particularly related to ammunition. We have reviewed the proposed rule, and agree in general with the transition of the majority of firearms and ammunition to the Commerce Control List. Export controls of commercial firearms and ammunition which are not inherently military, have no critical military or intelligence advantage, and have predominant commercial applications correctly belong under the Export Administration Regulations (EAR).

We would like to raise the following points regarding several items enumerated in the proposed rule:

Alignment of Terms Describing Caliber Between USML and CCL

In our review of both the DDTC and BIS proposed rules, we note an inconsistency in the way calibers are described in the control lists. In USML Categories I and II, firearms and guns are described “caliber .50 inclusive (12.7 mm)” and “greater than .50 caliber (12.7 mm)”, respectively. In new ECCN 0A501, firearms are described in subparagraphs .a and .b as “of caliber less than or equal to .50 inches (12.7 mm)” and “with a caliber greater than .50 inches (12.7 mm) but less than or equal to .72 inches (18.0 mm)”, respectively. The measurement in inches does not correlate exactly into caliber size, i.e. .50 caliber is not .50”. For example, .50 BMG caliber is actually 0.51” in diameter, not 0.50”. In commerce, .50 BMG ammunition is controlled with smaller calibers such as 300 Win Mag, and is separated from larger diameter calibers such as 600 Nitro Express. This could also impact other calibers such as 500 S&W Magnum or 50AE.

The caliber terms are not aligned between the control lists, and this could cause confusion and misinterpretation of the controls between the USML and CCL particularly in regard to the ammunition controls which follow the respective firearm controls.

The USML threshold of “.50 caliber” controls 50 BMG firearms in current Category I and related ammunition in current Category III. New ECCN 0A501 with the “.50 inches” threshold would put 50 BMG firearms under subparagraph b. However, 0A501.b does not control semi-automatic firearms “with a caliber greater than .50 inches (12.7 mm) but less than or equal to .72 inches (18.0 mm)”. Control of these semi-automatic firearms would be retained on the revised USML Category II. Because of the misaligned terms, controls on semi-automatic firearms currently designated USML Category I(a) would move to control under revised USML Category II. This is inconsistent with the transition of all other firearms currently controlled under USML Category I(a) to new ECCN 0A501.a.

In addition, revised USML Category III includes four subparagraphs which control related ammunition and components for “guns and armaments **controlled in Category II**”: subparagraphs (a)(9) ammunition, (d)(4) projectiles, (d)(7) cartridge cases, powder bags, or combustible cases, and (d)(14) target practice projectiles. Because 50 BMG, 50AE, and 500 S&W Magnum ammunition could be used in either semi-automatic or non-semi-automatic firearms, there is confusion on how these items will be controlled. If these calibers were classified under 0A501.a, then it would be clear that the related ammunition would be controlled under ECCN 0A505.

As currently written in the proposed rule, ECCN 0A505 controls ammunition for all firearms in 0A501. The proposed revised USML Category III includes control of ammunition for all guns and armament controlled in revised Category II. With the proposed description of caliber in inches in ECCN 0A501, ammunition for 50 BMG firearms would be controlled under both 0A505 and USML Category III. This needs clarification to rectify the overlapping controls.

RECOMMENDATION: For clarity of controls, there needs to be consistency in the expression of terms between the two control lists for items transitioning from one control list to the other. This can be accomplished in two ways. One would be for BIS to revise the terms in ECCN

0A501.a and .b to read “caliber” instead of “inches”. The other alternative would be for BIS and DDTC to describe caliber as .510 inches instead of .50 inches, and make the corresponding changes in USML Category II, and ECCN 0A505.

Deletion of ECCN 0A018.b and Revision of ECCN 0A505

In reviewing new ECCN 0A505 against other CCL entries, we note an inconsistency. Currently, ECCN 0A018 includes subparagraph .b, which controls the following:

“b. “Specially designed” components and parts for ammunition, except cartridge cases, powder bags, bullets, jackets, cores, shells, projectiles, boosters, fuses and components, primers, and other detonating devices and ammunition belting and linking machines (all of which are “subject to the ITAR.”);

Note: 0A018.b does not apply to “components” “specially designed” for blank or dummy ammunition as follows:

- a. Ammunition crimped without a projectile (blank star);
- b. Dummy ammunition with a pierced powder chamber;
- c. Other blank and dummy ammunition, not incorporating components designed for live ammunition”

The items listed in subparagraph .b have been revised and rewritten into the proposed changes to USML Category III and the new ECCN 0A505. Leaving ECCN 0A018.b unchanged will cause confusion due to the overlap of controlled items as listed in new ECCN 0A505.

In particular, we note that while 0A505.d indicates AT-only and UN controls for blank ammunition, the ECCN does not address controls for dummy ammunition which are the subject of the note to 0A018.b. Dummy ammunition is inert. It does not include powder or primer mix. It consists of only the metal components of the cartridge, with a hole drilled in the cartridge case to mark it as inert.

RECOMMENDATION: In keeping with the reorganization of firearm and ammunition ECCNs, we recommend BIS review 0A018.b against 0A505 and delete redundancies such as 0A018.b ““Specially designed” components and parts for ammunition” versus 0A505.x ““Parts” and “components” that are “specially designed” for a commodity subject to control in this ECCN...”.

We also request BIS revise 0A505 to include a Note similar to the Note to 0A018.b making a provision for dummy ammunition. Currently under 0A018.b, dummy ammunition is not controlled (EAR99) and we would request the same treatment under 0A505. If dummy ammunition can no longer be classified as EAR99 due to policy reasons, then at a minimum, we would request the same controls on dummy ammunition as for blank ammunition under 0A505.d, i.e. UN and AT-only controls.

Exception LVS Value Allowance

We note that proposed ECCN 0A505 includes an allowance for license exception LVS of \$100 for subparagraph .x “parts” and “components”. We also note that firearm parts and components under proposed ECCN 0A501 have an LVS allowance of \$500. Our members feel this is an inconsistency in the treatment of related items. In recent years, costs related to ammunition components have been increasing, with the largest increases affecting larger caliber cartridges. The proposed \$100 limit on LVS will be quickly met with small amounts of components, making this exception not as useful as intended. This will impact the smaller companies who will have increased license burden because the \$100 LVS limit will be too low to be of use.

RECOMMENDATION: We request BIS raise the value limit for the LVS exception to \$500 to match the allowance for firearm parts. We believe this is reasonable since the controls in place now under ECCN 0A018.b have an LVS allowance of \$3000 for “specially designed” components and parts for ammunition, and this allowance is much higher than the \$500 we are requesting. We also recommend BIS consider pegging the LVS value to inflation which would allow for incremental increases to match price increases over time.

We appreciate your consideration of our recommendations. Please let us know if you have questions or need any further information or clarification.

Thank you.

Richard Patterson
Executive Director

comments

I am a concerned citizen and I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as "non-military." But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.^[ii] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress' proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government -- i.e., taxpayers -- will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault

rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[iii]

The rule reduces end-use controls for gun exports. It would eliminate the State Department's Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Government's information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter's history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

The Commerce Department does not have resources to enforce export controls, even before the addition of 30,000 firearms export licenses as a result of this rule predicted by Commerce.[iv] The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

The proposed change will reduce transparency and reporting on gun

exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency – the Commerce Department - whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[v] The export of these weapons should be subject to more controls, not less.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of non-military firearms exports from the State Department to the Commerce Department. I cannot support any action that will endanger the lives of American citizens overseas and this change will make it easier for terrorists and foreign entities to secure American-made firearms, including deadly assault weapons, for killing Americans living, working, or traveling abroad.

In my view, the proposed rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly domestically. It comes after a multi-year lobbying campaign by the NRA and National Shooting Sports Foundation (the NSSF has already boasted the change would lead to a 20% increase in firearms exports). NO ONE other than the gun lobby asked for this change. It would make U.S. exports of small arms far more dangerous, by transferring oversight responsibilities to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more, which is inane. If your agency approves this blatant corporate giveaway and vast disregard for national security, I will do everything in my power to hold your leadership accountable for the resulting bloodshed that occurs globally. That will include advocating against your budget priorities across-the-board.

I am submitting this comment anonymously as the NRA and their syncophants use threatening language against anyone who questions their reasoning, data, or motivations. This is a matter of national security. Please wake up.

General Comment

I am writing in opposition to moving export license oversight for firearms from the Department of State to the Department of Commerce. The proposed rule change treats semiautomatic assault rifles as non-military. This is despite the fact that U.S. troops routinely use their military rifles in semiautomatic mode and these weapons are used by state and non-state groups in armed conflicts.

The proposed rule eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources or the interest to adequately enforce export controls.

General Comment

I am a teacher and US citizen with long-standing ties to Mexico and Mexicans. I completely oppose this proposed rule. The US government should not be taking orders from the NRA, which fears losing sales in the US because of right and righteous concerns over gun violence, and so wishes to export its means of profiting. This should not be US policy, human policy, or international relations. It is a transparent give-away to forces that will only further disrupt and derail Mexico's efforts to police its drug traffickers and curb its corruption.

Please reject this proposal.

General Comment

As a citizen of the United States, I have grave concerns about our violent gun culture that does so much harm to individuals, families, and society at large.

I oppose the proposed rule for the following reasons.

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

2. The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[ii] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. In a September 15,

2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government -- i.e., taxpayers -- will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[iii]

5. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

General Comment

I hope you will oppose the Trump Administration's proposal to transfer licensing and oversight of firearms exports from the State Department to the Commerce Department. The proposal weakens controls over semiautomatic assault weapons, .50 sniper rifles, high-capacity ammunition magazines and it may deregulate 3D printing of guns. It could also weaken controls on gun imports.

The proposed transfer will likely lead to more U.S. guns getting into the hands of criminal organizations, human rights abusers, and terrorist groups around the globe.

It's no surprise that the proposed rules are a priority for the National Rifle Association and the Newtown-based National Shooting Sports Foundation. Clearly, their goal is to open up international markets to compensate for lagging domestic sales. They are willing to spread our gun violence all over the world to boost gun industry profits.

I'm a long time resident of San Francisco, California and am absolutely appalled by the hundreds...thousands...of people being killed by unstable humans...mainly white males...wielding automatic and semi-automatic weapons!!!! This MUST STOP! NO CIVILIAN NEEDS SUCH A WEAPON!!!!

Therefore, I strongly oppose the proposed rule for the following reasons:

1. It eliminates Congressional oversight for important gun export deals.
2. Transfers the cost of processing licenses from gun manufacturers to taxpayers. That's totally wrong and unfair.
3. Removes statutory license requirements for brokers thereby increasing the risk of trafficking.
4. Reduces or eliminates end-use controls, such as the State Depts Blue Lantern program...eliminating registration of firearms exporters has been a requirement since the 1940s for very good reasons!
5. Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
6. Reduces transparency and reporting on gun exports.
7. Transfers gun export licensing from the agency with a mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.
8. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence,

terrorism, and human rights violations. They should be subject to more controls, not less!

9. Ideally, automatic and semi-automatic weapons should be removed from the market entirely and not manufactured in the first place.

Thanks for your consideration.

General Comment

When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

The Commerce Department does not have resources to enforce export controls, even before the addition of 30,000 firearms export licenses as a result of this rule predicted by Commerce.[iv] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political

violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

General Comment

Please leave the regulations as they stand. The more oversight for weapons sales and exports, the better. This is just a play for profits by a few organizations and companies and the USA, and the pain and inhumanity these weapons will bring to other nations will be a stain upon our national soul; all our souls. If anything, increase regulations on weapons exports, or eliminate them entirely. Please uphold the peaceful wishes of the majority of Americans.

"I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless. This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead to a 20% increase in American gun exports. We see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. If you go forward with this disastrous policy, I will do everything in my powerpeacefully and democraticallyto hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house."

General Comment

I wish to speak out against this proliferation of weapons used in war and crime, as follows:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

AEAA Comment on Proposed Rule for “Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the USML”

RIN 0694-AF47

This law firm, Mark Barnes & Associates, submits this comment on behalf of our client, the American Entertainment Armories Association (“AEAA”). The AEAA is a trade group comprised of several companies and over 100 individual armorers who provide weapons in support of film and theatrical productions.¹

Unlike many other items that have transitioned from the USML to the CCL, firearms are subject to unique restrictions on the permanent import side under the jurisdiction of the ATF. The State Department’s jurisdiction over temporary exports and temporary imports has played an important role in the firearms industry by providing companies (movie armorers in particular) with a viable method of bringing their guns back into the U.S. without running afoul of ATF’s strict importation prohibitions under 18 U.S.C. § 922(l) and § 925(d)(3). While we support Export Control Reform’s transition of these items from the USML to the CCL, we also urge the Department of Commerce to maintain a temporary export and temporary import process that allows an alternative to ATF’s vigorous import restrictions.

We are concerned that BIS’s proposed rule does not provide a mechanism, such as a DSP-73, for certain firearms to be temporarily exported and subsequently returned to the United States, given the firearm importation prohibitions under 18 U.S.C. § 922(l) and § 925(d)(3).

Accordingly, for the reasons stated below, we respectfully request the following:

- TMP exemption be expanded beyond paragraphs (a)(5) and (a)(6) to also allow for use in film production;
- To remove the 75 firearm limit when in furtherance of a film production;
- **Most importantly, in situations where the TMP exemption is unavailable, we request that BIS consider a procedure or license, similar to a DSP-73, that will allow for the temporary export and re-importation of firearms. Without such a measure, movie armorers will be significantly restricted in their ability to temporarily export and import non-automatic and semiautomatic firearms for film use.**

CURRENT PRACTICE

Individual companies within the AEAA are regularly contracted by major film production companies to temporarily supply weapons needed for various film projects worldwide. All of these companies hold Federal Firearms Licenses, are registered with DDTC, and are subject to audit by the ATF. When a movie is filmed overseas that requires firearms and ammunition, these armorers are required to obtain DSP-73 temporary export licenses from DDTC. The practice has become so

¹ The question is often asked why movies need to use real firearms. The performance of the actors, especially method actors, are directly associated with having the feel, weight, recoil, muzzle flash, ejection, etc. of the real thing. Thus, actors will oftentimes prefer to handle the real thing. Aside from that, there is the visual of the gun itself and the flash it creates that give film makers their desired effect which cannot be duplicated otherwise.

routine that in 2013 DDTC published firearms guidelines which included requirements for the following documentation to be uploaded with all DSP-73 applications for overseas movie productions:

- Import permit issued by foreign government;
- Plot summary;
- A security plan that details who will maintain dominion and control of the firearms and the procedures in place to prevent diversion;
- Manifest;
- A statement that any unfired blank ammunition would be returned to the US; and

A DSP-73 license is vital because it covers both the US export and US import requirements. If the armorers were only able to obtain a DSP-5 permanent export license, the return of the exported firearms would be subject to ATF's permanent import process which restricts many types of firearms pursuant to federal law. For example, ATF policy is to deny the following three types of firearms pursuant to 18 U.S.C. § 925(d)(3):

1. Firearms not generally recognized as particularly suitable for or readily adaptable to sporting purposes ("non-sporting" firearms) – in a 1998 policy paper, ATF interpreted this to include any firearms that have certain cosmetic features;
2. Military surplus firearms; or
3. Firearms regulated under the National Firearms Act (machineguns, short barreled rifles, short barreled shotguns, destructive devices, and certain other weapons).

In order to comply with the above restrictions, ATF requires each firearm model be submitted for evaluation to determine if the above criteria is met. If ATF concludes that a particular firearm is not captured by one of the above three disqualifiers, the importer will be allowed to apply for a Form 6. Even if given the go ahead to apply, a Form 6 import permit application can take several months to process.

Clearly, the ATF Form 6 process is not intended to be used for firearms that leave the United States on a temporary basis. Moreover, most firearms temporarily exported for the movie industry are either military surplus, non-sporting, or National Firearms Act weapons, of which importation is prohibited.

The EAR's current regulation of shotguns under ECCN 0A984 has already presented the movie industry with significant problems when attempting to use the EAR's temporary export ("TMP") exemption. Because this ECCN 0A984 is subject to the Crime Control restrictions, there are very few countries where the TMP exemption can be used. *See* 15 C.F.R. § 740.2(a)(4). For example, there has recently been a large influx of movies being filmed on location in Colombia. Because TMP is unavailable for Crime Control countries such as Colombia, the armorer would need a BIS export license to export non-sporting shotguns. However, once the non-sporting shotguns were exported, § 925(d)(3) would prohibit their return to the United States. As such, shotguns are routinely removed from movie story lines because of the inability to return them to the United States without going through the burdensome ATF import process. In several instances, the production company has even contemplated having the armorers shorten the shotgun barrels to

below 18 inches, thereby placing them under ITAR jurisdiction so that they could be exported and returned all under one DSP-73. As explained below, the proposed rule only exacerbates this problem by offering TMP as the only temporary export/import mechanism.

PROPOSED RULES

As mentioned, when the TMP exemption is unavailable and a BIS license is required, it is impossible for movie armorers to return to the United States with the firearms they exported for film use. It is additionally not clear that movie production would even fit within one of the two approved uses of TMP in the proposed rules.

Approved TMP Uses

The proposed rules block the use of the TMP exemption for ECCN 0A501.a or .b firearms and shotguns with barrels under 18 inches in length (ECCN 0A502) under TMP *unless* such a transaction is in furtherance of

- “Exhibition and demonstration” under § 740.9(a)(5); or
- “Inspection, test, calibration, and repair” under § 740.9(a)(6).

The plain language of paragraphs (a)(5) and (a)(6) indicates that overseas movie production would not be a valid use of the TMP movie exemption. Paragraph (a)(5) envisions either display at a trade show or demonstration for a prospective buyer in anticipation of a sale. Furthermore, it requires “that the exporter, an employee of the exporter, or the exporter's designated sales representative retains ‘effective control’ over the commodities ... while they are abroad.” In many cases, foreign laws will not allow firearms to be under the “effective control” of private parties. As such, foreign governments will often mandate that their police or military maintain secure possession of the firearms while not on the film set, further preventing us from complying with paragraph (a)(5). Paragraph (a)(6) which allows “Commodities to be inspected, tested, calibrated, or repaired abroad” under the TMP exemption, is consonantly inapplicable to film production.

75 Gun Limit

We understand why TMP is limited to 75 firearms per shipment. However, this restriction further limits our ability to claim TMP as an exemption. Larger film productions such as war movies, will oftentimes require well beyond 75 firearms. Productions such as Warner Bros. / Dreamwork’s *Flags of Our Fathers* and *Letters from Iwo Jima* required US armorers to temporarily export over 700 non-automatic or semiautomatic firearms. Had BIS’s proposed rules been in place at that time, there would have been no way to export those vintage military surplus firearms and subsequently bring them back into the United States.

CONCLUSION

For the aforementioned reasons, we respectfully request that TMP be broadened for film use, and where TMP is not available, that a mechanism be available to return the firearms to the United States. Should you have any questions on this comment, please do not hesitate to contact Michael Faucette at (202) 626-0085 or michael.faucette@mbassociateslaw.com.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department.

What I don't understand (but have figured out what I believe) is that the Administration has chosen to strengthen its already strong relationship with the NRA and its funders in the gun manufacturing industry to shore up that industry.

Meanwhile the Administration is treating people coming here to escape the escalating violence in their communities in Central America as if they were the criminals, going so far as to separate young children from their parents.

This proposed regulation would only result in even more violence and even more people trying to seek refuge in the U.S. from the violence our own policies would encourage.

This is immoral and should not be allowed.

This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also reckless.

This rule has one purpose only: to garner profits for a U.S. gun industry that is faring poorly in the domestic market. It comes after years of lobbying by the NRA and National Shooting Sports Foundation. No one elsed asked for it or wanted it. The NSSF, the trade group for the gun industry, has already boasted the rule would lead

to a 20% increase in American gun exports. We see the gun lobby's influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. These weapons were not designed for household use, they were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters.

If you go forward with this disastrous policy, I will do everything in my power peacefully and democratically to hold your leadership accountable for the resulting global bloodshed. That will include advocating against your budget priorities across-the-board until a new, non-corrupt administration can come in and clean house.

General Comment

This is to express my opposition to changes in regulation of firearms export. American weapons makers do not contribute positively to our economy. Their products lead to increased health care costs, job loss, loss of productivity, increased costs for care and housing of those with gunshot wound-induced disability, and harm to the environment. Spreading this harm to others in the world is irresponsible. Work instead to find other means for these weapons makers to manufacture items that contribute positively to the economy.

Raytheon Company Comments BIS Firearms and Ammo ECCNs (83 Fed Reg 24166) (filed 2018-07-03)

July 3, 2018

U.S. Department of Commerce
Bureau of Industry and Security
Regulatory Policy Division
Room 2009B, 14th Street NW
Washington, DC 20230
Via: www.regulations.gov

**Subject: Raytheon Company Comments on Firearms, Guns, Ammunitions, and
Related Articles**
Ref: 83 Fed. Reg. 24166 (May 24, 2018)
Docket ID: BIS-2017-0004

On May 24, 2018, the Department of Commerce, Bureau of Industry and Security (“BIS”) requested comments from the public on the proposed rule to transition certain items from United States Munitions List (“USML”) Categories I, II, and III to the Commerce Control List (“CCL”). Below please find comments from Raytheon.

License Exception TMP and New § 758.10

The temporary import and subsequent export exception and clearance rules proposed in 15 C.F.R. §§ 740.9 and 758.10 appear to seek to introduce mechanisms currently available to temporarily import certain items controlled on the USML after they transition to the CCL. Currently, permanent imports are regulated by the Attorney General under the direction of the Department of Justice's Bureau of Alcohol, Tobacco, Firearms, and Explosives (“ATF”) whereas temporary imports are regulated by the Department of State, Directorate of Defense Trade Controls (“DDTC”). Under the International Traffic in Arms (“ITAR”), approval for temporary imports and subsequent exports is accomplished through a DSP-61 (temporary import license) or exemptions such as 22 C.F.R. §123.4. The ITAR draws a clear distinction between permanent and temporary import jurisdiction in 22 C.F.R. §120.18, although certain items regulated under the Gun Control Act or National Firearms Act, if authorized for import under those laws, continue to require transactional import approval from ATF for temporary imports unless ATF Ruling 2004-2 (April 7, 2004) permits the DSP-61 or ITAR exemption to substitute for this approval.

Existing mechanisms such as the DSP-61, the 22 C.F.R. §123.4 exemption, and the related ATF Ruling 2004-2 allow for temporary imports to be subsequently exported from the U.S. for a period of up to four years. It is unclear whether ATF Ruling 2004-2 will be amended to account for this USML to CCL transition but assuming it will be, as that would be necessary to keep industry in the same position as currently, the method proposed in the BIS proposed rule would permit temporary import and subsequent export within a period of only one year compared to four years under the current setup. We recommend that the period in 15 C.F.R. § 740.9(b)(5) be extended to four years as certain activities for which a temporary import is

Raytheon Company Comments – Firearms, Guns, and Ammunition
July 3, 2018
Page 2 of 2

required cannot always be accomplished within one year and a four year period is necessary to keep industry in the same position as it currently is.

Additionally, under DDTC's current practice, if a temporary import originally intended to be exported within four years later needs to stay in the U.S. for a period of longer than four years, industry can request a replacement DSP-61 or General Correspondence from DDTC to extend the period of time. It is unclear what mechanism BIS would use to administer similar requests so we request clarification on this issue. If the TMP exception temporary import time period remains at one year, the need for this mechanism will be increasingly important.

Finally, the proposed additions to 15 C.F.R. § 740.9 include an instruction directing temporary importers and exporters to contact CBP at the port of temporary import or export, or at the CBP website, for the proper procedures to provide any data or documentation required by BIS. Raytheon recommends that BIS and CBP coordinate to create standardized instructions for all ports that can be made available online so that each shipment does not have to be specially coordinated.

Effective Date

Raytheon strongly supports using a delayed effective date of 180 days as has been done for other USML to CCL transitions. Such transitions require updates to IT systems, policies, processes, and training which require time to complete. Based on experiences in performing these tasks during previous transitions, the full 180 days is necessary.

We appreciate the ability to comment and thank you for your partnership.

Public Comment 132. Individual. Adele Riffe. 7-3-18

Submitter Information

Name: Adele Riffe

General Comment

The Trump administration has proposed to make it easier for U.S. gun makers to export guns and ammunition globally, even though U.S.-exported firearms are already used in countless crimes, attacks and human rights violations in Latin America, the Middle East, Africa and around the world.

The proposal would move export licenses for semi-automatic assault weapons, sniper rifles, and other powerful firearms from the State Department to the Commerce Department, removing Congressional oversight, weakening controls on who ends up with the weapons and even lifting restrictions on 3D printing of guns that would permit production of guns both overseas and here at home. The U.S. gun industry and the NRA have pushed hard for these changes to make up for falling gun sales. The Commerce Department estimates that the proposed change would apply to 10,000 gun export applicants a year.

Please do not allow any weakening of controls or restrictions on gun and ammunitions licensing, sales and/or production - either nationally or abroad. We need common-sense restrictions on guns. The NRA just wants to sell more guns, to improve its profits. It does not care that its actions have direct consequences on our lives, increasing the probability that someone we love might be involved in gun-related violence.

General Comment

My name is Sister Marie Lucey, and I am a Catholic Franciscan Sister serving as Associate Director of Franciscan Action Network (FAN) in Washington, DC. FAN is a member of Faiths United to Prevent Gun Violence, and works to reduce gun violence in our country at national, state and local levels. We regret that firearms are a major export of the United States and believe that gun export regulation is important. We oppose the proposed rule change for many reasons including the following:

Departments of State and Commerce have different missions, purposes, and roles and gun export licensing should not be transferred from an agency with a mission to promote stability, conflict reduction and human rights to an agency whose mission is to promote trade.

The proposed rule would eliminate Congressional oversight for significant gun export deals, and its ability to comment on related human rights concerns would be limited. In a September, 2017 letter, Senators Cardin (senator in my state of residence), Feinstein and Leahy noted that this move would violate Congressional intent and effectively eliminate Congress' proper role.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of condoning and enabling 3D printing of firearms in the U.S. and elsewhere.

Firearms are used around the world to kill a thousand people every day in acts of organized crime, political

violence, terrorism, and human rights violations. Military-style assault rifles and ammunition transferred to Commerce control are weapons of choice for criminal organizations in Mexico and Latin American countries, especially the Northern Triangle, that are responsible for record levels of homicides. The export of such weapons need more, not fewer, controls

Public Comment 134. Individual. Susan Hornik. 7-3-18

Submitter Information

Name: Susan Hornik

General Comment

I am extremely concerned with gun violence against civilians both within the US and around the world, and I strongly oppose moving export licenses of assault weapons and other powerful firearms from the State Department to the Commerce Department. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts so this is a fiction. Additionally, many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

In fact, the proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons.

Additionally, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Hence, there is reason for considerable concern that firearms brokers will no longer be subject to US brokering law. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons now. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking.

Finally, the new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Why should citizens pay for gun exporters to profit? Its another absurd example of corporate welfare.

General Comment

To Whom It May Concern:

The loosening of firearm export rules fuels violence around the globe. There are two compelling reasons to not do so.

1. The basic moral wrong perpetuated by providing more lethal weapons used in ways that kill civilians and destabilize societies.
2. While most Americans may not appreciate the havoc wrought by our weapon exports, people across the globe recognize the weapons used to harm their families and friends, and damage their societies and economies. Many people understand who are the manufacturers of specific armaments and associate the nations from which they originate with the violence they perpetuate. This is a grassroots foreign policy disaster for the United States.

Please maintain if not strengthen the rules already in place.

Thank you for your consideration.

General Comment

I am opposed to moving export license oversight for firearms from the Department of State to the Department of Commerce. The export of firearms is a state department responsible not a commerce department responsibility. The proposed rule change treats semiautomatic assault rifles as non-military when they have significant military uses especially by non-state actors.

The proposed rule also: eliminates Congressional oversight for important gun export deals; transfers the cost of processing licenses from gun manufacturers to taxpayers; and, enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

keep the oversight within the Department of State.

Thank you for considering my comments.

General Comment

My name is Jason Miller and I am the Director of Campaigns and Development at the Franciscan Action Network in Washington, D.C. As a person of faith, I am extremely disturbed that guns are a major export of the United States and believe that gun export regulation is important. I oppose the proposed rule change because as Pope Francis said: there is a piecemeal world war III currently being waged and the United States is one of the biggest players. Instead we must work for diplomacy and peace.

How many people must die in the cause of the NRA and the gun manufacturer. And now we will allow them to sell their guns to other countries. What so they can ban together and come back to the U.S. and kill more Americans. Do we not have some moral responsibility to the people of the world as well as our own?

General Comment

I am writing to oppose changing the rules so as to make it easier for U.S. firearm manufacturers to export assault rifles and other guns. We need the valuable oversight and accountability that is provided by the current law.

With gun violence killing 1,000 people around the world every day, we should be making it harder, not easier, to export U.S. made weapons of war.

Thank you.

Our guns kill children everywhere. The government of the U.S.A. should not be supporting businesses that provide the means for killing children at home and abroad. The merchants of death do not care how their products are used as long as they profit. But the people of this country and our government ought not to be promoting the movement of arms around the world.

General Comment

switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Submit comments now to the State Department and the Commerce Department opposing the rule change.

*You can copy and paste the points in this email or use your own voice to make unique comments to the State and Commerce Departments.

Please do not approve this rule. ALL our arms exports need to be monitored and need to be kept on the USML

The NRA and gun manufacturers are pushing hard for this rule change. The President will go along with whatever they tell him is "good for American Business" They want guns everywhere, for everyone, not just here in the United States, but around the world.

I like many citizens believe that the result of this new rule means that it will become easier for firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents to obtain large caches of American guns and ammunition. Firearms exports SHOULD CONTINUE TO BE classified as military so they are under the regulation of the State Department. As it stands, Congress can block sales of large batches of firearms to foreign countries and this is an important thing for the security of this country. I would not trust this President to make a good decision on this. He is too bought and paid for by the NRA and the arms manufacturers.

I oppose the proposed rule change that would switch the regulation of firearms export from the U.S. State Department to the U.S. Commerce Department. But these two departments have very different mandates: State to safeguard our nation, and Commerce to promote American businesses. Assault weapons should not be seen as just another product to be promoted, bought, and sold like washing machines or any other consumer product. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I oppose the change in rules in the regulation of exportng firearms from the U.S. State Dept. to the Dept. of Commerce. This would not allow Congress to be notified and block any shipment of large caches of firearms to be exported to foreign countries thus enabling dangerous entities such as terrorist groups, oranized crime and traffickers to prevail and is matter of national security.

The U.S. Dept. Of Commerce is ill equipped as it lacks the resources and field offices to take on such an endeavor of regulating large export of firearms from so many possible locations.

I feel it would be a mistake to change the current rules and accountability.

General Comment

I am an American who travels to Mexico often. It is extremely difficult there for citizens to legally buy guns. They do not have mass shootings there, but there is a horrendous amount of violence perpetrated in Mexico by criminals who obtain American-made guns. This makes maintaining order extremely difficult for that countrys law enforcement - a problem which has direct ramifications on the US. Do not make it easier for American gun manufacturers to profit off of violence around the world and here in our beautiful U.S. of A.

Public Comment 166. Individual. Joan Balfour. 7-3-18

Submitter Information

Name: Joan Balfour

General Comment

A rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business) would open new floodgates for arms sales internationally, with serious implications for our national security.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

Changing firearms regulation and classification as proposed in this rule would be the height of madness. It is a blatant attempt by the NRA and gun manufacturers to pull a runaround maneuver. Under no circumstances should firearms be reclassified: Their sale and export should remain the purvey of the US Government and Congress. Doing anything else would open a floodgate of arms shipments to all kinds of dangerous forces outside the US. Please, please do not consider even the possibility of changing the current ruling.

General Comment

Permits for sales of arms overseas should be based on sound American policy putting safety of Americans and American interests first and above all. A permitting process based on what is most profitable to gun manufacturers must be firmly rejected. They are responsible for too many deaths already. We should not be arming those around the world who will do even more harm.

A transfer of this process from the Dept of State to the Dept of Commerce for the financial benefit of manufacturers of weapons is completely contrary to legitimate American policy and interests.

I completely oppose any rule changes that would transfer the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. American firearm manufacturers cause enough bloodshed and violence here at home. There is no reason this mayhem should be easier to export to peaceful, civilized and non-violent nations. Thank you very much.

General Comment

The Unites States has a gun problem. Anyone who doesn't think so has been in a dark room for most of her life. The United States has the highest percent of gun ownership, the highest number of guns, extremely high rates of murder and gun related crime compared with most of the world. The United States government must take measures to address this problem. Making it easier to obtain a gun is not an answer, it is an abdication of responsibility to its citizens.

General Comment

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. That is why I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

General Comment

It seems amazing to me that a president who claims to be creating new immigration barriers under the guise of national security will allow an easier way for fire arms to be sold to foreign buyers. This seems like a move that would make our borders less secure and our nation less secure as well as those around the world than the many innocent families seeking asylum whom are turning away from our borders and imprisoning. This proposed rule is a bad decision for other reasons as well:

-It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

-It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

-It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

I oppose this rule change. Switching the regulations on firearms exports from the U.S. State Department to the U.S. Commerce Department puts people all over the world at risk, for the benefit of a few gun manufacturers, because the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

The Commerce Department has inadequate staff to be monitoring the flow of firearms into and out of the USA. Thus, dangerous players on the domestic and foreign fronts would have far greater access to the destructive devices they seek. In addition, the shift would eliminate the State Departments Blue Lantern program, that has been in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

Furthermore, it would remove licensing requirements for brokers, increasing the risk of trafficking. Finally, it would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. My Congress members must have direct knowledge and formal input regarding the flow of arms that leave USA soil. The security of my family, neighborhood, nation, and planet depend upon thoughtful, responsible, ethical oversight and monitoring of all weapons of war and extortion. I do not trust military-industrial complex corporations nor the Commerce Department to be effective or reliable in this regard.

I strongly oppose this rule change. The Department of commerce is not equipped to effectively oversee firearms sales overseas and this change either make it much easier for terrorists and criminals overseas to acquire large stockpiles of weapons. Additionally it would eliminate the legal prohibition of 3D printing firearms, resulting in untraceable and unregistered weapons here in the US, hobbling law enforcement.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I am very concerned about this tactic by the NRA. It must be stopped...for the safety of our Nation and all of the world's citizens. I expect responsible action be taken to prevent the NRA from getting away with this. Thank you.

Americans, as well as citizens of the world are depending on you to put our safety above profit.

I am writing to strongly urge you to not change the regulation of firearms exports from the State Department to the Commerce Department. It would facilitate firearms exports to unstable, oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

We seriously need you to stand up to profiteering pressure and NOT ALLOW an increase of guns to be released into an already unstable arena. It would not be the responsible thing to do. Our families deserve to live with greater security than this would encourage. Thank you.

I oppose the transfer of regulations that control the sale of firearms from the Department of State to the Department of Commerce. This is not in keeping with national security and might allow arm sales to regimes that are dangerous.

I urge you to continue to classify firearms as "military" . To have them controlled simply as goods for sale is dangerous.

I object to this proposal and demand that weapons exports continue to be treated as military armaments. The proposal would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them, would remove licensing requirements for brokers, increasing the risk of trafficking, and would remove the State Departments block on the 3D printing of firearms. I demand this proposal be rejected.

Please do not enact the proposed rule; firearms should continue to be controlled under the USML.

We are now seeing what is only the start of mass migration from countries where arms have flooded into the hands of criminal organizations, paramilitary organizations, and drug gangs. If we can't welcome those fleeing increased violence with open arms in the United States, we should not make it even easier for bad elements to get more guns, and thus increasing the flood of asylum seekers. This would be self-defeating on many other fronts, before discussing the already atrocious handling of immigrants by ICE.

Please do not enact the proposed rule. Thank you.

Submitter Information

Name: C. Flannery

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It is VERY important that the state department be fully aware of the sale of large quantities of firearms. There should also be a limit on how many firearms are sold each year. The world needs less guns not more!!! The guns that are made should only be in the hands of people with extensive training.

General Comment

I am writing to express my opposition of switching the regulation of firearms exports from the State Department to the Commerce Department. This change would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. I believe we currently have too few regulations over firearms in our country and in our international relations, and do not feel like this is the correct direction to take our arms regulation.

General Comment

I strongly oppose the change in regulation that would mean Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I oppose this rule change. Firearms exports should continue to be classified as military.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

General Comment

The State Department should by all means retain the authority to handle export licenses of semiautomatic assault weapons and other powerful firearms. The transfer of that authority to the Commerce Department would kill a program that carries out post-shipment & pre-license inspections, eliminate licensing requirements that hamper trafficking, and open the way for anyone to make 3d printed weapons. Also, the State Department alone can give notice to Congress to block weapons sales that could jeopardize our security. For all these reasons, the proposed transfer should be abandoned, as it would make us considerably less safe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! Congress should know when large amounts of firearms are being sold to other countries. guns go to Mexico illegally and look what has happened there- thousands of deaths in the last year with American guns.

Just like many of the other changes in this country in the last 18 months this is dangerous this is not what we should be doing to keep a peaceful world. it is just lining the pockets of the gun makers.

Be responsible.

Thank you.

General Comment

I am writing to strongly object to the proposed changes in the United States' proposed rule on the Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML).

Right now, firearms exports are classified as military. This is why firearm exports are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. This is a good policy and it helps keep the world and Americans safe.

If the regulation of firearm exports is changed to regulation by the Department of Commerce and the Bureau of Industry and Security (BIS), then exports of firearms will be less regulated and firearms will fall into the wrong hands around the world. Indeed, the Department of Commerce is not charged with safeguarding the USA, that's the job of the State Department, so it should regulate firearm export. Also I am concerned that the BIS does not have the ability or resources to effectively monitor and control the export of firearms. Thus firearms will spread across the world and firearms will find their way back into the United States, where they can be used against innocent children. In fact, if the Department of Commerce is in control of firearms exports, then Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

Please do not shift control of firearms exports to the Department of Commerce and the BIS. Such a move will generate bloodshed across the globe and here are home in America. We must avoid such a future and prevent

more gun and firearm violence.

General Comment

It's a very bad idea to eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[]

Removing licensing requirements for brokers will increase the risk of trafficking.

Removing the State Departments block on the 3D printing of firearm is a terrible plan. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Sincerely,
Elise Margulis

To Whom it may concern:

There is a push to transfer control of firearms to the Department of Commerce which does not have the resources to oversee the transfer of these weapons particularly if they are allowed to be sold in other countries. Our country's security would be at risk once these weapons leave our boundaries. Below are several other very important reasons why this transfer should not happen.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I am aware that the State Departments Blue Lantern program provides critical controls over arms exports. We cannot allow less regulated sales of weapons to further tarnish the world's view of our nation as a rogue state willing to inflict destruction wherever a market for murderous firearms can be found. Commerce Department does not have the resources to govern international arms sales. Please do not allow current regulations to be weakened.

General Comment

Sir,

I would like to address the proposed rule change on which department should control gun sales. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Considering the national security interest AND the inability of Commerce to actually handle the job, I propose that doing this would be clearly the wrong thing to do.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

General Comment

America has the highest number of guns--and gun deaths--of ANY developed country in the world. Mass shootings are becoming commonplace, to the horror and embarrassment of every logically thinking, peace-loving citizen. WHY on earth would we want to export our PROBLEM to the rest of the world? NO--the NRA . . . and American gun manufacturers . . . should NOT have the ability to architect the demise of our fellow human beings. NO LEGALIZED GUN TRAFFICKING!!!

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

This change would mean that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I wish to express my opposition to the rule change that would allow the Commerce Department (focused on promoting American business) --not the State Department (focused on safeguarding our nation) -- to handle export licenses of semiautomatic assault weapons and other powerful firearms. The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. The marketing of these weapons to firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would create many long-term and intractable problems in international relations and imperil lives everywhere. The safety and security of our nation and the marketing of large caches of American guns and ammunition are incompatible. Please do not take part in making the world a more dangerous and violent place.

General Comment

I write to strongly urge you not to move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department, which is focused on safeguarding our nation, to the U.S. Commerce Department, which is focused on promoting American business. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Keeping firearms exports classified as military allows Congress to monitor and block sales of large batches of firearms to foreign countries. I am deeply concerned that with the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

In addition, I don't believe that the Commerce Department has the resources to adequately enforce export controls.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Specifically,

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder

Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The proposed rule change would make the world a far more dangerous place. Please do not put the financial interests of firearms sellers ahead of the safety and well-being of citizens everywhere.

Far too much gun violence haunts our world. We are all wounded. Too many guns are endangering all of us. The Commerce Department does not have the resources to protect us from the arms trade. That huge challenge belongs far more appropriately to the State Department. Please oppose any change to our countrys governance regarding the trade in guns.

General Comment

This action is not advised. It will threaten national security by making it easier for terrorists and other enemies to have access to these weapons and to turn those weapons on Americans. The NRA and gun manufacturers have a right to make money, but not if that right endangers national security. Second amendment rights do not trump the right to life and security. National security and personal safety should not be sacrificed for the sake of greed. I speak as a military veteran and as someone who has served in law enforcement and private security. I also hold a Bachelor of Science degree in Criminal Justice. thank you.

General Comment

I am opposed to changing the purview of firearms export from the Department of State to the Department of Commerce. It appears that primary purpose of the change, as promoted by the NRA, is to loosen the restriction on the export of firearms including military-style semi-automatic weapons.

One of the primary reasons that individuals and families from Central American countries seek to gain asylum in the U.S. or to enter illegally is for personal safety and to escape the high levels of crime and violence in their countries of origin. A large percentage of the weapons used illegally in these countries are sourced in the U.S. They are smuggled into these countries from the U.S. through the efforts of unlawful and unscrupulous gun dealers and criminals.

So, as we attempt to stem the flow of asylum seekers and migrants, both legal and illegal, from these countries, we are at the same time contributing to the conditions that spur them to leave their homes.

I do not see how the transfer of oversight from State to Commerce will improve the current situation, which is what we should be doing, and not making a bad situation even worse.

Such a transfer would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder

Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I strongly urge you not to make this change and thereby make it easier for gun to move out of the U.S. into the hands of criminals and criminal gangs in Central America and other countries.

General Comment

My family and I have just learned the the NRA is lobbying to move regulations of sales from US gun manufacturers from the Department of States to the Dept of Commerce. This Unacceptable and inappropriate .

No other nation in the world has a civilian population that is armed as ours is here. Who are the customers for these weapons? Terrorists, paramilitary groups and criminals. Will US weapons be used to kill our own military personnel? To kill our allies and friends? To kill vulnerable population groups? To kill American tourists? Without a doubt! Will the Dept of Commerce, whose purpose is to promote the sales of American products become an enabler of weapons dealers? Putting regulation of weapons sales under the Department of Commerce is a complete renunciation of every effort to control the flow of weapons that can and will be used against Americans (and other humans)! This is so anathema to the best interests of the USA, it crosses the line to treason, as it aids and abets the enemies of the United States of America.

You must use everything in your power to stop this descent into chaos.

Sincerely, Marianne Hunter and family

General Comment

I vehemently oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department, thereby greatly weakening Congressional oversight of overseas arms sales. There are more than enough wars going on right now, and the US should not be in the business of creating more, or expanding the ones we have. There's much at stake in this world besides CORPORATE PROFITS!

The State Department, not the Commerce Department, should regulate the sale of arms outside of the US. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

My additional concerns are that this switch would:

- * eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- * remove licensing requirements for brokers, increasing the risk of trafficking.
- * remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The Commerce Department does not have the expertise, resources or global reach that State has to regulate arms sales to keep America safe from savvy overseas actors.

Please do all possible to keep weapons classified as military equipment and under jurisdiction of the State Department, especially export of same. They should not be treated as ordinary "good" for sale worldwide. They should not be under control of the U.S. Commerce Department as they are not like any other items under control of the Commerce Department.

Thank you in advance for considering my statement on this matter.

I oppose this rule change because the Commerce Department doesn't have enough resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I oppose switching regulation of fire arms exports from the State Department to the Department of Commerce which would remove safeguards against violence around the world.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

This would be dangerous and destructive to countries and people throughout the globe.

General Comment

I am submitting this comment in strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms far more dangerous by transferring controls to an agency that prioritizes doing business over safeguarding national security.

The NSSF has already bragged that the rule would lead to a 20% increase in American gun exports. We can see the gun lobbys influence in the rules description of semiautomatic assault rifles like the AR-15 as civilian products. Weapons such as these were not designed for personal use; they were designed for battlefield, which is why they are the weapons of choice for mass shooters.

Aloha,

I am writing to request that oversight of firearms exports remain with the U.S. Department of State, rather than shift to the Department of Commerce. There are numerous reasons for this, but chief among them is common sense. Commerce is charged with selling things. The Department of State has a loftier purpose, and within its purview is public safety, here and abroad.

Shifted to Commerce, guns become just another commodity, regardless of their deadly purpose and impact. At State there is civility and restraint, plus rigid guidelines honoring American responsibility.

Surely Commerce has better options for would-be customers than those very items that bring such pain and suffering to our own citizens.

Thank you very much.

aloha, Peter Gellatly

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The State Department has the resources and mandate to keep American guns out of the hands of oppressive regimes, international criminals, and terrorists - the Commerce Department does not.

For reasons of national security, the State Department should continue to handle firearms export regulations.

General Comment

I oppose switching responsibility for the regulation of firearms exports from the US State Department to the US Commerce Department.

- This would eliminate the State Departments "Blue Lantern" program, which has been in place since 1940, carrying-out hundreds of pre-license and post-shipment inspections and publicly reporting on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. Background - when Defense Distributed founder Cody Wilson posted online instructions for how to manufacture weapons using 3D printers, the State Department successfully charged him with violating arms export laws - his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms both in the U.S. *and* around the globe. At that point, there's no safe place, anywhere.

And, so much for a market for US arms manufacturers when it's possible to make your own untraceable weapon.

Essentially, switching the regulation of firearms exports from the State Department to the Commerce Department would (1) make it easier to provide firearms to oppressive regimes, (2) remove safeguards to help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons (tough enough as it currently is), and (3) further fuel violence that destabilizes countries and causes mass migration. Is that what the United States is - an unscrupulous arms merchant? We criticize other countries for doing this - how is this maintaining high moral ground?

Any *truly* religious person would oppose this action.

General Comment

Allowing the export of firearms presents a clear and present danger to our own country. I cannot believe this idea will be seriously considered. All those guns abroad will come back to haunt us. I would hope that other countries would forbid such sales. But they shouldn't have to. WE should prevent them from being exported. This is crazy.

General Comment

I am completely against a move to change rules for firearms to be sold to other countries from the Dept. of State to the Dept. of Commerce. While we expect other countries not to interfere with our regulations, someone wants to make weapons just another commodity so that the rich capitalists can become even richer and the world less safe! At a time where we have bee at constant war, and expect other countries to stop making weapons, the powers that be in DC find this action acceptable???

I deplore the expansion of more weapons to be sold and certainly not through the commerce Dept. in order to avoid Congress. Have we elected a dictator or a President of a Great Democracy! This action in no way makes for peace and neither does a stupid military parade the wastes our hard-earned tax dollars for no purpose!

I am completely against both actions and want the powers that be to take notice. Thank you for listing and acting against such insanity!

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Currently, firearms exports are classified as military. This is why they are under the regulation of the State Department, and gives Congress the ability to block sales of large batches of firearm to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. The Commerce Department lacks the resources to enforce export controls adequately. Under the proposed rule change, this lack of enforcement and transparency would allow firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents to obtain large caches of American guns and ammunition much more easily than they can now.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

We must safeguard the interests of our nation rather than relax regulations for the purposes of making money for gun manufacturers.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This is an incredibly bad idea the origin of which lies in a basis of greed and nothing else. To allow easier export of weapons with less oversight defies sound reasoning, common sense, and simple logic. We in the USA already have a severe problem with too many guns in the wrong hands as evidenced by the massive increase in mass shootings, the likes of which were exceptionally rare in our past. Why would we want to export that? If anything, we need to make it far more difficult to export weapons in order to address the all too common violence around the world. This is yet another senseless and foolish idea from the most corrupt administration in our nations history.

I am opposed to the move of regulating firearms exports from the Department of State to the Department of Commerce. Commerce does not have enough staff to adequately enforce export controls. State currently has the Blue Lantern program, dating to 1940, which conducts pre-license and post-shipment inspections and publicly reports on them. That would disappear under Commerce. Also, licensing requirements for brokers and bans on 3D printing of weapons would be removed. With Congress no longer notified of arms sales to repressive regimes such as the Philippines and Turkey, the world would be a more dangerous place.

General Comment

The Commerce Department does not have staff to adequately monitor arms sales, nor does it have a vested interest in keeping the world sane and peaceful. Opening arms sales to anyone (think organized crime, terrorist groups) would make the US and the world less safe.

Given the current world situation with civilians dying in ever so many places, it makes a lot more sense to keep arms traffic under the Department of State, where arms sales can be monitored appropriately. Human lives are more valuable than money. It's time to get US policies back in line with international mores and with our common values.

General Comment

I oppose this rule change.

With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. The Commerce Department just does not have the resources to adequately enforce export controls. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Here are more details on how the rule change would make the world a far more dangerous place:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with

access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Thank you

General Comment

We strongly oppose the change that would place the sales of firearms internationally under the control of the Department of Commerce rather than the Department of State as has been the law.

Too many dangers exist in this proposal which seems to be based solely on profit motives.

Some of the changes that will cause problems are

- 1.It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2.It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3.It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

We see the proliferation of guns anywhere as a threat to security, life and limb. To extend the curse that our country has come under to others around the world seems profoundly cruel and inhumane.

Military weapons have no place in our society, they cause too much harm for a simple misunderstanding. Pump stocks are also an issue for me. Not enough people have the common sense to teach children about gun safety and the responsibility that goes with it. Children are taught to play with guns from a young age, and there is no training or lessons that have been taught to keep children safe. School shootings have become ramped and no one in our government seems to take them seriously enough to protect children while at school, in the store, or elsewhere.

General Comment

I fervently disagree with the idea of switching the regulation of firearms exports from the State Department to the Commerce Department.

The State Department is the proper entity to handle export licenses of semi-automatic assault weapons and other powerful firearms.

Transferring this authority to the US Commerce Dept would open new floodgates for arms sales internationally, with serious implications for our national security.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Such a move would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose this rule change.

I am a United States citizen of 84 years, and I am in strong opposition to the transfer of authority over gun sales export from the Department of State to your Department of Commerce. If anything, we need more and tighter restrictions on sales of guns, particularly assault type weapons, especially in these volatile times. Please consider this, as I worry for the future of this nation. I thank you for your consideration.

General Comment

I wish to object to a proposal to switch oversight of international firearms sales from the State Department to the Commerce Department. First, we're talking about weapons, and we need to be careful who we help to arm in this world. That's always been part of State's mission; Commerce deals with, well, commerce. It's about trade and economics, not protecting human rights -- which could be severely compromised if some of our weapons land in the wrong hands. Commerce just isn't set up to oversee that kind of operation. In addition, certain programs would be eliminated: a.) the State Departments Blue Lantern program, created in 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them; b.) oversight of licensing requirements for brokers, increasing the risk of trafficking; c.) the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe. All in all, the proposed change would make the world a more dangerous place. Please, please don't allow it to go through.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode much of the time. Many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The proposed rule would eliminate Congressional oversight for important gun export deals. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Gun exporters that benefit from these sales should shoulder this cost instead.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking.

The rule would eliminate the State Departments Blue Lantern program for publicly reporting gun and ammunition exports. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to deny weapons licenses to violators. End-use controls also are weakened by eliminating registration of firearms exporters.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing

of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument. The new regulations effectively condone and enable 3D printing of firearms around the world. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could cause many preventable tragedies.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BIS's enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. The State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

The rule would eliminate Congressional and public awareness of the total amount of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency whose principle mission is to promote trade. Firearms are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

General Comment

I strongly oppose this rule change which favors the interests of gun manufacturers over the safety of Americans. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I oppose the rule change that would make arms sales regulated by the Department of Commerce rather than the Department of State, where the responsibility lies now. This seems to me a short-sighted rule change which would make it easier for people around the world to kill each other, and us. When American safety is the buzz word in Washington, DC, why would a rule that makes us less safe even be considered?

This rule is a really bad idea.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

All that, just for the sake of increasing sales volume and profits for U.S. weapons manufacturers?

This is terrible public policy, domestically and internationally. Please drop this proposed rule.

more than a million! more than a million have died since John Lennon was murdered in 1980.it is way way to easy to get a gun! and it is way to easy for anyone with a gun to kill themselves or others when life has been hard for to long or when anger pushes them over there abillity to contain. or when a threat seams to be real, or after a bully beats them or scare them or pushes them in a cornner. or when you get your,re heart broken and sometimes over and over. then maybe you lose someone that was everything to you or more than one. or when you are older and life has not been good to you. or you are disabled and losing hope and your will to live. or when you lose everything that you loved. or when you are sick losing hope. or you come home and find your,re mate with another having sex. you lose your kids or wife or man. when you have lost your hope and feel soooo sad like it just doesn,t matter! THE HURT CAN BE TO THE POINT YOU LOSE CONTROL AND THERE IS A GUN ! YOU ARE NOT THINKING RIGHT AND JUST LIKE THAT BANG ITS OVER!

most that try to kill themself if they live would not do it again! most that have killed would never do it again!

EASY ACCESS TO A THING LIKE A GUN ! MAKES IT WAY WAY TO EASY TO DO THINGS YOU CAN NOT TAKE BACK AT A TIME WHEN YOU ARE NOT THINKING! NO ONE HAS EVERY THING GO RIGHT ALL THE TIME IN LIFE! ANYONE CAN BE PUSHED TO FAR OUR HURT THAT MUCH!

THE GUN MAKES IT WAY TO EASY!

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

I am horrified to hear of a proposal to change the rules on the export licenses of semiautomatic assault weapons and other powerful firearms from being handled by the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I understand that firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

Please, put our national security first and decline this alarming proposal.

General Comment

Do NOT change the rules by which firearms are sold overseas. They should continue to be sold as military hardware and regulated as they are now by the State Dept., NOT sold as civilian commodities such as clothing or produce. It's bad enough that we have inadequate regulations on firearms sales right here in the U.S.A, but now the firearms mfg. industry led by the NRA want to export our wild west disregard for the lethality of the barely regulated industry. Shame on us.

General Comment

I, Robert Jensen, a citizen of the United States, believe the Second Amendment to the Constitution, limits the right to bear arms to a militia, such as the National Guard, or private, or public police. This amendment was never intended to be used by individuals for self-defense, or killing people. If so, this is contrary to the Ten Commandments of the Bible. The United States has one of the highest number of murders per capita/per year on Earth. Nearly all countries ban the private use of guns.

The recent decision by the United States Supreme Court, allowing guns for self-defense was wrongly decided; and conflicts with prior precedent.

Until this decision is overturned, I am in favor of strict controls, such as: banning assault rifles; automatic, and semi-automatic weapons, and bump stocks; mandatory, and complete background checks; requirement to have standard prior training in the use of guns; and mandatory storage of guns, to prevent the killing of innocent people.

Thank you for this opportunity to comment.

General Comment

I oppose this proposed rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

In fact, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Additionally, switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. All these represent threats to U.S. national security.

I urge you to oppose this proposed rule change.

I oppose moving the regulations of firearms export away from the U.S. State Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would make it easier for guns to end up in the hands of those outside of the law like organized crime and terrorist organizations and enemy regimes. It would further fuel violence that destabilizes countries and causes mass migration.

Selling guns outside of the US is NOT business as usual and must be monitored by expertise of the State Dept.

General Comment

As an American teacher and someone who cares deeply about ending random violence and human rights abuses around the world, I firmly OPPOSE the rule change that would move the handling of export licenses for semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. Personally, I don't trust American weapons manufacturers to be ethical when it comes to such foreign sales. In addition, the Commerce Department isn't structure to handle proper oversight of such sales.

Making it easier for weapons manufacturers to sell their wares without the oversight of the US Congress is insanity and flies in the face of everything the Trump administration says about trying to keep the Homeland safe from foreign terror and gang threats. Investigations have shown that many of the weapons used in drug and terror related crimes in Latin America (where I'm currently living and teaching) already originate in the USA. Taking away Congress's and the US State Department's oversight of large sales of semi-automatic weapons will only increase the violence in countries where human rights abuses are now common place. This, in turn, will cause more refugees to flee violence-plagued countries and attempt to cross into the USA illegally.

Isn't anyone in Washington, D. C. these days able to use critical thinking skills and connect the dots. The violence always makes it's way back to (and inside) America's borders.

I urge you to reject this rule change!

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! It is unthinkable that the US would be considering promoting the sale of assault weapons world-wide.

Friends, I write in OPPOSITION to a rules change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would facilitate vastly increased sales of arms internationally, with serious implications for our national security. Such a policy could lead to an unfortunate future situation where our own combat troops face troublemakers armed with American made weaponry. This would be an unacceptable outcome! Please maintain the status quo on this issue, as current regulations have been effective for decades.

I oppose the rules change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This rules change benefits the NRA, not American National Security! I oppose it.

I understand that the NRA is pushing for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

I fear that this would be the undoing of civilizing as we know it. At this point in history, with record unrest, human migration and displacement, adding more arms is disaster to the common man. Governments cannot win, peace cannot win, humanity cannot win. Changing the overseeing cabinet depart from the State to the Commerce department can only be for the purpose of selling death.

All it will do is control population growth. ZPG

General Comment

I strongly oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Below are more reasons why the proposed rule change should not be approved:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

It would impact our national security by facilitating firearms exports to oppressive regimes, removing safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fueling violence that destabilizes countries and causes mass migration.

The world needs less firearms, not more.

Humanity needs less killing, not more.

General Comment

This proposed rule change would make the world a far more dangerous place: and
It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
It would remove licensing requirements for brokers, increasing the risk of trafficking.
It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe

Who is to say that the increased gun shipments to foreign countries wouldn't be used against our country, decreasing our national security. The rule change's only purpose is to enhance the profit of the gun manufacturers.

General Comment

Recently proposed, suggestion is a tragedy to humankind- expanding USAs reputation as merchant of death to civilians. Bad enough America is already known for it in military weapons.

Gun manufactures, NRA and others are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Everything coming out of this administration- coal to soybeans, to auto parts, to steel is labeled national security when true be told its corporate socialism and another white collar federally funded jobs program.

Export of weapons (all types, make, model, purpose) need to remain with State department not commerce.

General Comment

The suggestion to move international gun sales away from the State department's control is painfully, ludicrously, dramatically, and objectively a TERRIBLE idea. We would no longer have any knowledge of weaponry sold to our enemies in terrorist organizations. It would make our country LESS safe. This is arguably the stupidest idea I've ever heard.

General Comment

As a gun owner, former hunter, and former ARCAO (Korea: Camp Henry, Camp Humphries, Camp Casey 71/72 when these bases were primitive), I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I do not want weapons in the hands of terrorists and criminals in other countries that can be used, not only against their own people, but against Americans abroad.

Ive travelled the world and been in many conflict zones, including Afghanistan. The lawlessness of these areas is exacerbated by the fact that everybody owns a weapon. Small arms and light weapons are the preferred weapon of these small-time bullies, drug dealers, and cartels, as well as big-time terrorists like ISIS, al-Qaeda, al-Shabaab, Boko Haram.

Making light weapons (the definition includes: revolvers and self-loading pistols, rifles and carbines, assault rifles, sub-machine guns and light machine guns) available as a commodity anybody can order without any restrictions over the internet, makes it easy for small arms dealers to buy and resell these weapons, the favorites of terrorists, criminals, and drug dealers. We dont want American criminals to have these weapons. Lets not loose them on innocent civilians around the world. Say no to any loosening of any restrictions of exporting weapons. Dont be tone deaf to American values. Americans dont want more foreign threats, any more than we want more communities disrupted by gun violence. Make it harder for these terrorists to get guns, not easier. Keep cheap guns out of the hands of these bullies. Keep American government workers, international corporate workers, and tourists safe from criminals. People over profit.

General Comment

I am strongly opposed to the proposed rule change that would transfer the oversight of non-military firearms exports from the State Department to the Commerce Department. The proposed rule is supported by the NRA and the only purpose is to increase the profits for the US gun industry--one that loosing support in the USA. The only entity that is requesting this change is the gun lobby and it expects this change will increase firearms exports by 20%. This will put more guns in the hands of terrorists around the world. It is even more dangerous because it moves supervision and oversize to an agency that prioritizes business over national security. The U.S. Congress would also lose its ability to oversee commercial weapons sales of \$1 million or more; this makes no sense. This seems like one more attempt to legitimize semiautomatic assault rifles as civilian products when these battlefield weapons have killed too many civilians already. Please do not approve this blatant corporate giveaway. The world does not need more instruments of mass killing--only the gun lobby would think this is a good idea. We the people are watching as you make these decisions. Please make them wisely as you will be accountable.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This rule would also remove the State Departments block on the 3D printing of firearms, made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. It is unwise to increase access to these weapons domestically or internationally. I very much oppose this rule change, as it would do much more harm than good.

Here are details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

It would totally nullify the ability of the US to keep from arming dangerous foreign nationals, thereby making attacks on US soil far more likely.

This stupid idea to enrich the already rich arms dealers boggles the imagination!

General Comment

I strenuously object to any action of my government that makes the distribution of military style weapons - or for that matter ANY weapons - easier than it currently is. Our nation does not need to be exporting the violence that our gun culture causes here to infest other nations. The current proposal to shift control to the Commerce Department blatantly prioritizes gun dealer and manufacturer profit over civilization and safety.

The current proposal:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I do not want my country to stand before the world as preferring money to human rights!

I could not be more vehemently opposed to this!! Making it easier for people around the world to have dangerous weapons is, at the least, counterintuitive!! We are already suffering from our mistakes with guns being trafficked to Mexico and Latin America, resulting in the migration of those seeking asylum in the U.S. to escape the violence of gangs and cartels. Let's learn from these and other mistakes, such as arming the Afghans many years ago!

General Comment

I am very concerned about the proposed change to easier to spread murder weapons legally across the world, just because the gun industry wants to make more profit. This is not in our interest as a nation, to be complicit in increasing homicide rates abroad. Some of the reasons to not approve this proposed rule change are:

- 1) Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- 2) Eliminates Congressional oversight for important gun export deals.
- 3) Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- 4) Removes statutory license requirements for brokers, increasing risk of trafficking.
- 5) Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- 6) Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- 7) The Commerce Department does not have the resources to enforce export controls, even now.
- 8) Reduces transparency and reporting on gun exports.
- 9) Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Thanks for this opportunity to share my views as a citizen and voter, and to allow me to express my desire to

make the world a safer place, not one where firearms end the lives of thousands every year.

Submitter Information

Name: Judith Weeks

General Comment

I strongly OPPOSE switching the regulation of firearms exports from the State Department to the Department of Commerce. It would remove the State Department's ability to restrict 3D printing of weapons and open the floodgates for more weapons domestically and internationally; It would remove licensing requirements for brokers; and it would stop the program that inspects pre-license guns and issues reports. Without the State Department oversight and regulatory authority, firearms will be exported to anyone with money and contribute to organized crime and terrorism.

There is NO need to switch control of the export of firearms unless it is to pay for firearms lobbyists. This is just another ruse by the NRA to gain more control and have less oversight into their actions. PLEASE DO NOT APPROVE THIS MOVE.

Sincerely, a concerned citizen

Judith Weeks

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for this rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Once again, I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Thank you for your attention to this important matter.

General Comment

In a free capitalist society companies have and do lobby aggressively for total unregulated ability to sell their wares inside and outside the country. Most products that are likely to cause danger to others or to consumers are highly regulated and rightly so like automobiles, medicines and even foods. This protection of the American and world consumer is inherent to the U. S. capitalist core. One exception is guns. Why?

Reasons abound. The point though is about the legality and morality of both selling internally and exporting to the world without logical restrictions of highly dangerous guns and war-caliber weapons to regular citizens in the name of a companys right. What about the right to protect consumers, families and communities? The government has both the economic and moral obligation to protect consumers and all citizens. The recent past legislation expired in the late 1980s that prohibited the sale of automatic and other war-calibre weapons to regular citizens inside and outside the U. S. was a bi-partisan agreement, totally in line with the U. S. Constitution. It is not a coincidence that violence in the last 20+ years has dramatically increased both in the U. S. and is currently ravaging neighboring countries. Unfortunately, this tragedy is largely caused by U. S. supplied and free-flowing arms that have no reason to be in the hands of law abiding citizens and even less reason to be accessible to dubious groups. Governments law enforcing forces are overextended and are often part of the many victims high-powered guns enable. A safety-driven and regulated gun industry is otherwise feasible.

Exporting the U. S. phoneme of mass shootings (it does not happen around the world; only with recent terrorist groups), increased brutality facilitated by easy availability of guns that should only be allowed in case of war, higher risks of gun-assisted suicides and rising youth violent behavior are against every Americans safety. Expanding a market of death and violence by U. S. companies does not make any sense.

Restate previous limits for starters. Show what American capitalism is really all about, growing wealth and prosperity peacefully. Regulation of danger is part of this.

General Comment

The control of sales and shipment of fire arms and weapons made in the US should be closely governed within and without the USA. No shipments of US weapons should go out of the US to any foreign countries unless they are US allies. Then shipments should be guarded by US soldiers until placed in the hands of allies.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department, which is focused on safeguarding our nation, to the U.S. Commerce Department, which promotes American business. This transfer of authority and oversight will increase arms sales internationally and have serious implications for our national security.

This stupid idea will put the United States at risk from outsiders that have bought guns from unscrupulous dealers that only have their bottom line in mind. The State department can at least control what and where munitions are sold - preferably NOT TO OUR ENEMIES inside our country or outside our country.

General Comment

What we allow in the USA in terms of guns and gun parts which can kill multiple people should never be allowed here or anywhere. This is sounding like the shift of cigarette advertising to other countries when tobacco industries were forced to put labeling on cigarette packs the US indicating that cigarettes are dangerous to peoples' health. Let's sell these guns and gun parts to other countries, and start doing so right away, before they are banned in America. What a fantastic way to keep gun manufacturers in business! Then we really will have to carefully monitor people coming to America! Hopefully the reader of this letter can see the sarcasm...

General Comment

I fiercely oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security, to say nothing of the security of people in other countries where these guns would end up. The United States, historically the protector of human rights and supporter of democracy worldwide, must never become the purveyor of death to people around the world. We would be vilified forever if this were to happen.

I wish to object to any regulatory change that increases the health and safety of humans anywhere. Our injury and death statistics related to firearms incidents dwarfs that of the rest of the civilized world. We do not need to export that kind of risk elsewhere. Profiting from this would benefit a very few compared to the potential harm to others. And it is likely some of these weapons could be used on Americans. Please refuse this regulation change. Thank you.

The ability of the NRA to enact legislation that goes against the wishes of 80%-90% of the population is disturbing and frightening. Politicians that are complicit in passing legislation that goes against their own constituents are acting as profiles in cowardice and should be called out repeatedly, by name, on this issue. The NRA is responsible for more deaths in the United States than any terrorists groups and should be shamed accordingly. The idea that the NRA now wants to export their gun madness and arm our potential enemies is pure insanity. We must organize and vote the NRA politicians out of office. Thank you.

Safety first. We need to take action to keep our citizens and the citizens of the World safe. Having the U.S. State Department handle the export licenses of semiautomatic assault weapons and other powerful weapons would keep safety first as the top criteria. The U.S. Commerce Departments first priority is increasing sales. Who knows how far safety would be pushed down the list. It is in our best interest to continue to have the U.S. State Department handle export licenses.

Moving any regulations of assault/military, and large capacity weapons needs time for review. It is obvious that a commercial agency would lean towards looser regulations to promote business. The NRA already has too much to say in terms off what determines "public safety" . Each new shooting is a testament to that useless viewpoint. Dead is dead-"prayers and sympathy do NOT REPLACE LOST family members. The President and his 1% money grubbing team are ONLY interested in 1 thing- guns everywhere- with little restrictions. Let's really look into who would benefit dollar wise-it should be an interesting fact finding mission.

General Comment

So now we live with the possibility of ANYONE being armed and carrying in concealment., Where do the founders suggest that this is what they expected for us? Why do we NEED to live like this? How do we do well towards others when others may want to do ill towards us? Who wins under these circumstances? Weapons manufacturers, NRA, politicians who receive donations from the gun lobby, morticians, etc. We NEED to live peacefully. More guns havent made us safer, and never will. This world of ours would be under constant siege with unregulated weapons.

THINK ABOUT IT! Then dont allow the sale of our peace, our security and our lives for the profit of the few. Find your soul, find love of life and humanity.

General Comment

I oppose the firearms rule change that would switch regulations to the US department of commerce. This would lead to making gun sales more difficult to trace and more obscure.

I oppose this rule change that would switch the regulations of firearms export from the U. S. State Department to the U. S. Commerce Department. I think this would be a very unwise decision. It could in the future result in difficulties for our soldiers against revolutionaries and gangs in foreign actions among other things.

Thank you for your time and attention.

Sincerely,

Mrs. Nancy Brown

General Comment

I do not support the proposed BIS rule for the control of firearms, guns ammunition and related articles. We need more stringent controls on the export of weapons, not fewer!
We should further restrict the movement of weapons and ammunition by all legal means.
We also need laws and procedures to register and trace all weapons that are sold in the domestic market.
The incredible rate of homicide and suicide by firearm is linked to easy access in the US.

We know US guns also flood neighboring countries , such as the weapons fueling armed violence in Mexico. In fact, most of the guns used by Mexican drug cartels come from the US due to our lax gun laws.

General Comment

The second amendment was always about allowing the states to maintain a standing army. The fact that includes a qualifier on "an organized militia" means that there is a limit to how and when this "right" applies. This was written in English so even conservative monolingual individuals SHOULD be able to understand it. ONLY the state has the right to establish a militia, so NO, NOT EVERY don, don jr., or eric is allowed to carry a saturday night special let alone a RPG! If they have such a problem with it, maybe they should talk to betsy devoss about what an awful job she did at the Department of Education. After all they are all the product of private schools.

General Comment

I am extremely concerned about these proposed rule changes. Overseas weapons sales are not just simple financial transactions with little or no consequences if goods are ultimately resold or otherwise passed along to third parties. Allowing weapons to leave these borders should require extra oversight to make sure that we do not inadvertently cause problems diplomatically or allow our troops do not find themselves under attack from our own weapons. These are complex matters that require a careful weighing of many interests. The system currently in place, with the State Department providing oversight, is better able to address the myriad of concerns. With all due respect, the Commerce Department simply is incapable of bringing the same degree of insight to these matters as their focus is mostly on the monetary, rather than the practical implications for foreign policy and national security. The president and those in his administration like to talk about their concern for national security, but these proposed changes suggest otherwise. I trust actions, not empty words. These changes should not be adopted.

General Comment

I strongly oppose the proposed BIS rule change that would remove control of the sale of firearms and related items from the USML. This is a clear and blatant attempt by the NRA to allow the US to become the arms dealer to the world, with no concern for our national security or for anyone's safety. The NRA knows that our current administration is quite willing to support firearms sales to everyone. This is a quid pro quo for the massive donations that the NRA makes to many in our current government.

If we allow this rule change, we will be harming America's security and the safety of the entire world. This is not what most of us want for America. We want a safer world, not a world where gun dealers can supply arms to anyone who can pay the price, without reasonable oversight.

Please do not approve this change. Demonstrate some maturity and common sense and show the world that America has not lost all common sense and ethical and moral behavior.

General Comment

I am strongly opposed to this rule change and ask that regulations of firearms remain under the jurisdiction of the State Department. The sale of firearms to other countries is a matter of national security, and it is not only inappropriate but dangerous for these sales to be regulated by the Commerce Department. The dangers this rule change pose include firearms reaching oppressive regimes, organized crime, and terrorists, as well as 3-D printing of firearms. There is no justification for this rule change - the profits of gun manufacturers and their lobbyists do not justify the increased danger to Americans and our national security that this proposed rule change poses.

We dont want all guns taken away, we want reasonable and necessary background checks. Also, all gun sellers should have to require gun background checks. There could be a database of people who have had and passed background checks...vendors could have access to this database and use it to verify before purchasing. If you are unwilling to have a background check, I would question your fitness to purchase.

Please strengthen gun control laws. Do not weaken them in anyway. Obviously this is a huge problem. Thousands of people are dying every year because gun control laws are not strong and tough enough. When will this change? How many people have to die? Im scared to go to a movie theater. Im scared to send my children to school. All because crazy angry people have plenty of access to guns. It makes no sense.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

This change will eliminate Congressional oversight for important gun export deals and transfers the cost of processing licenses from gun makers to taxpayers. It also removes statutory license requirements for brokers which could increase the risk of trafficking.

The Commerce Department does not have the resources to enforce export controls.

This change transfers gun export licensing from an agency with the mission to promote stability, conflict reduction and human rights, to an agency whose mission is to promote trade. Please do NOT make this rule change.

Thank you.

I am deeply concerned by the proposal to move firearms from ITAR to EAR.

I work in the space industry, where we must be exceptionally careful in our handling not only of materials but of knowledge concerning anything that could be used in a weapons system. We are taught that a rocket, even one designed for peaceful purposes, is to be treated as a potential missile.

If ITAR regulates potential weapons, it ought to regulate actual weapons. If it doesn't, perhaps we should be looking at sharing more of our space technologies (which aren't weapons) with the rest of the world via EAR.

Moreover, the State Department not Commerce ought to have the final say on where weapons are exported and by whom, as weapon export has an obvious effect on our ability to participate in diplomacy. The Commerce Department should not be saddled with the responsibility of conducting diplomacy.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

It seems the height of folly to have the regulation of firearms export overseen by a department concerned with the well being of its citizens to a department whose bottom line would tend towards how much money can be made.

Thank you for considering my comments.

To: Bureau of Industry and Security,

The proposed rule to no longer monitor and control firearms and ammunition is by far is one of the most blatant attempts of the NRA to influence a governmental safety measure. Controlling and monitoring firearms and ammunition helps prevent the attempts of individuals and groups to obtain mass quantities of firearms and ammunition with no oversight and can lead to misuse of these firearms and ammunitions. Please maintain the current laws that monitor and control these items and please place more common sense gun and ammunition laws to help protect the average American citizen.

Thank you,

Anne Doane

Dear legislator,

I oppose any and all regulations proposed by the NRA. I oppose any and all REMOVAL of regulations that the NRA approves. I will oppose any votes that are undertaken by any legislator that accepts NRA money for the NRA's advantage. I will continue to oppose all of these things until the situation changes drastically. Also, dear legislator, I will continue to oppose YOU until your votes are more in line with the safety and security of the citizens of America.

General Comment

I wish to submit my opinion regarding switching the regulations of fire arms from the State Dept to the Dept of Commerce. I am STRONGLY in OPPOSITION to this change, as it would potentially make our country and the world more dangerous than they are already. If this switch were to occur, the State Dept would no longer be able to restrict 3-D printing of weapons, thereby opening the floodgates for the production/distribution of more weapons. I've been told that this would also remove licensing requirements for brokers, and would stop the program that inspects pre-licensing of guns and issues reports. We are already seen by the world to be unrestrained 'cowboys', We need to become more insightful in regard to the proliferation of weapons that make it into the hands of terrorists, international gangs and organized crime, and without the State Dept oversight and regulatory authority, firearms will be exported to anyone with money. I cannot conceptualize the need to switch control of firearm exports - - please do not approve this item.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Though I'm sure it would be profitable for gun manufacturers, it would create serious consequences for our country, not the least of which could ultimately be an increased security threat of our own making.

I strongly object to this rule change! It would be a travesty to transfer the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

This moves the emphasis from SAFETY of American Citizens to COMMERCE! Much more is at stake than \$\$\$.

Please reconsider.

General Comment

I am opposed to the proposed rule change being sought by the State Department. This is a dangerous move by the State Department which will create more gun violence for other countries involved in the sale of US made firearms and munitions. Semi automatic assault rifles should not be reclassified by the Dept. of State as "non-military" type arms. Members of the US military, as well as groups engaged in armed conflict around the world. The proposal to essentially transfer the cost of processing licensing fees from gun manufacturers to taxpayers is unacceptable. Taxpayers should not have to bear the financial cost of the transactions which companies that sell guns engage in. The removal of statutory license requirements for brokers increases risk of trafficking of these firearms. Businesses in the United States should be able to sell guns to foreign governments, but under the assurance that the weapons sold will not fall risk to trafficking. This proposal enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. I am firmly opposed to removing this current prohibition on the 3D printing of firearms. We do not need to add even more enforcement responsibilities to the Dept. of Commerce when it currently has a hard time regulating current export controls. This provision transfers gun export licensing from an agency with a mission of promoting stability, conflict reduction, and human rights, to an agency with mission to promote trade. I, as a private citizen and a taxpayer am against all potential changes which the President has proposed with regards to the exporting of firearms and munitions.

We do not need to make assault style weapons more readily available. Quite the opposite. These weapons are NOT for self defense or hunting. There is no reason for most of the general public to have assault weapons that are designed specifically for military use and are designed specifically to kill lots of people. We should be working harder to insure that people who cannot handle such responsibility are not able to get their hands on these highly specific and very dangerous tools. Public safety is at serious risk.

There are too many guns in this country and the U.S. leads the world in gun injuries and deaths. Do everything in your power to make buying a gun a little more difficult so criminals and the mentally ill do not have an easy time getting them. It is the right thing to do. You probably have kids, do you want your children growing up constantly worried about being shot?

General Comment

This is a terrible rule change. Control of firearms, guns, ammunition, and related articles is essential to defusing conflict.

It is really stupid to arm the world because we will have those same arms aimed at us. It has happened before and will again, as in Afghanistan, for example. Arms dealers will get rich, and the rest of us will get killed.

There is a reason that arms smuggling and arms dealing are viewed as dirty. It's because they are horrible crimes against humanity and lead to ever increasing violence.

THE United States should never add to the capacity for killing and maiming in the world. We can be better than that.

This is a terrible idea! If guns and related items can be sold to any person or country with no regulation or control, those arms will probably be used against us in some way. They would probably be used against our allies, also...but who would know???

There are other reasons this would not be appropriate, but common sense says this will be harmful to everyone except who sells and lobbies for gun sales and support.

If the NRA is trying to promote this to increase the gun sales in our country, that is totally immoral.

I urge all with power over this proposed rule to NOT change control from the State Department to the Commerce Department.

Common sense: background checks for ALL. Even gun shows, maybe especially gun shows.

Age limit of 21 and older

No rapid fire and especially NO guns more capable than those of our police officers.

It's just common sense. Start with this and then debate any other restrictions. We all deserve to feel safe but to frighten little and big children and teachers etc for the sake of someone owning a gun is just plain ridiculous!!!

General Comment

It seems that the rest of the sane world already knows that less guns is better for everyone. We need to study gun deaths and the bloodthirsty gun owner mentality as if it was a disease in need of a cure. We need to better control who can purchase guns of all kinds, especially assault. I can tell from nearly everything I read that most gun owners feel the same way.

I should think the sheer number of mass shootings since the beginning of the year would indicate a "control of firearms" is indeed necessary. We control how people drive or if they vaccinate their kids before entering school because they address public health issues. Death from guns is a public health issue

As a mother and grandmother, I oppose the proposal to move oversight for international arms sales from the state department to the commerce department. We don't need to be freely exporting our culture of armed aggression to endanger other children in other nations. The only winners would be the arms manufacturers, and their profits are just fine as it is.

General Comment

This government run by a corrupt president is making our lives far less safe every day. This is just another way he can destabilize the people and make it far more easy to use guns to kill people. Trump seems to think that these regulations are an impediment to freedom, but in fact they are exactly what the people want... fewer guns out in our homes, streets and neighborhoods. These guns should certainly be under the US Munitions control.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Our world is very unsafe and unstable at the present time. How much more unsafe and unstable will it become if this rule change should go into effect? Please do not let a few extremists dictate a US that is drastically different from the one envisioned by our Founding Fathers!

Please do not transfer authority over the sale/export of firearms from the State Department to the Department of Commerce. The State Department has the necessary expertise, which Commerce lacks, to safeguard our national security by preventing sales going to international bad actors. Moreover, the Department of Commerce necessarily seeks to boost sales of US products and exports overseas, which will result in an increased number of firearms "out there" in the world. Given the number of countries, groups, and terrorists that seek harm to the US and its citizens, this is a patently bad idea. This rule change makes no sense whatsoever, except as a means of boosting profits for (already profitable) gunmakers and pleasing special interests like the NRA.

I oppose the rule change that would switch the regulation of firearms export from the U.S. State Department to the U.S. Commerce Department

What could possibly go wrong!!??

The consequences of this regulatory change have obviously not been thought through--like a lot of other Trump policy decisions. (Do we really want a repeat of the fiasco we now have on the southern border? That's what happens when things are not thought through.)

The consequences of this rule change include the escalation of violence and destabilization of local governments all over the world. Literally. Groups from Africa to Ukraine, to Central America, the West Bank, and southeast Asia--groups as diverse as narc-o-terrorists, organized crime gangs, oppressive oligarchs, and insurgent elements in civil wars everywhere (literally everyone from MS-13 to ISIS) will now be able to acquire American-made armaments and munitions--in any quantity--with minimal scrutiny. The escalation of violence and oppression of political opposition anywhere not only harms its immediate victims, it also drives the flight of refugees seeking asylum which the Trump administration ostensibly wants to STOP--with either a wall or travel ban. However, this rule change exacerbates that particular problem. An "open arms market" does not improve national security; it actually worsens it.

Therefore I oppose this rule change. ..

General Comment

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

This proposed regulation is terribly unwise because firearms, guns, ammunition and related articles would not be regulated at all. Allowing an irresponsible president, who has no sense of how to protect American citizens or people all over the world, to disallow dangerous weapons from being controlled, is an extremely reckless policy proposal and must not be permitted.

Please do not proceed to implement this proposed rule. Thank you.

General Comment

am writing in opposition to the proposal for the U.S. to become a major international weapons dealer. The proposed rule changes are wrong and dangerous for many reasons including:

--Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

--Eliminates Congressional oversight for important gun export deals.

--Transfers the cost of processing licenses from gun manufacturers to taxpayers.

--Removes statutory license requirements for brokers, increasing risk of trafficking.

--Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

--Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

T--he Commerce Department does not have the resources to enforce export controls, even now.

Please do not go forward with this proposed change in rule.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The U.S. State Department is focused on safeguarding our nation in juxtaposition to the U.S. Commerce Department that is focused on promoting American business. Let's safeguard our nation.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It does not make sense in terms of security to make it easier for our enemies to buy weapons, assault weapons, then turn around and harm our citizens. In this era of gun violence taking innocent lives, rather than improving regulations, making sure our country's State Department is aware of arms sales, this move increases the risk of weapons ending up both in the wrong hands but also us not knowing where these weapons are going. This proposed rule change treats semiautomatic assault rifles as non-military. By definition an assault weapon is made to assault and cause harm. Assault is illegal. There is no reason to make this available to anyone. It has nothing to do with the right to bear arms. This is only about making more money..

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). Clearly, this is not about our right to bear arms as the NRA advertises itself. This is all about money and making money, without care of our country/citizens. I am so tired of our governing leaders only making decisions based on making money over everything else while professing great Christian values. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Do NOT transfer control of firearm exports to the Dept of Commerce. Think of what is right not making more money.

I oppose the sale of guns to other countries under the commerce department. Spreading our weapons around the world for profit has only one motive, the big buck.

At some point you have to say no more. What is a life worth?

Australians had massive buy-backs of guns and now gun violence is a rarity.

Gun violence is our country's shame. We should not spread the shame to other countries.

General Comment

This transfer of authority from the State Department to the Commerce Department replaces diplomacy, which advocates for alternatives to military action, with corporate self-interest, which places profit before the well-being of people around the world. It is economic imperialism in the guise of trade expansion. Such a shift is immoral and against the best interests of the United States.

General Comment

I wish to comment on the proposal making it easier to export U.S. guns and ammunition globally.

As a parent and a grandparent, this is an issue I feel very strongly about.

I have read that this proposal classifies semi-automatic assault rifles as non-military when they are used by our army. They are also used by opposing forces in armed conflicts, and are prohibited for civilian possession in many countries.

It would remove Congressional oversight for important gun export deals.

Taxpayers would have to pay processing licenses instead of gun manufacturers.

It removes statutory license requirements for brokers, increasing risk of trafficking.

I understand that the Commerce Department does not even have the resources to enforce export controls, as it is.

It reduces transparency and reporting on gun exports.

There are many other reasons that I know the above proposal is a very bad idea that will cost untold lives.

Please reconsider this ill timed and very unwise proposal.

General Comment

I am completely opposed to this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This has serious implications for national security. The State Department needs to be in oversight of these transactions.

General Comment

The AR-15 was designed to inflict maximum damage as quickly as possible. It isn't a hunting rifle, its not a self-defense measure.

The AR-15 assault rifle was engineered to create what one of its designers called "maximum wound effect." Its tiny bullets, needle-nosed and weighing less than four grams, travel nearly three times the speed of sound. As the bullet strikes the body, the payload of kinetic energy rips open a cavity inside the flesh essentially inert space, which collapses back on itself, destroying inelastic tissue, including nerves, blood vessels and vital organs. "It's a perfect killing machine," says Dr. Peter Rhee, a leading trauma surgeon and retired captain with 24 years of active-duty service in the Navy. "A handgun wound is simply a stabbing with a bullet," says Rhee. "It goes in like a nail." With the high-velocity rounds of the AR-15, he adds, "its as if you shot somebody with a Coke can." The shooter used a Smith & Wesson M&P15, a military-style assault rifle with large capacity magazines. Assault weapons were also used in previous mass shootings, including Aurora, Colorado; Newtown, Connecticut; San Bernardino, California; Umpqua Community College, Roseburg, Oregon; Sutherland Springs, Texas; and Las Vegas, Nevada.

We do not want to hear our state and federal officials offering their thoughts and prayers for this latest tragedy we want action now! Military-style assault weapons and large capacity magazines have no place in civilian society and are only designed to kill and injure large numbers of people in a short period of time.

We cannot allow the daily carnage in our country to be the new normal.

General Comment

I am strongly opposed to changing the regulation of firearms exports from the jurisdiction of the US State Department to that of the US Commerce Department. The regulation of firearms exports should continue to be overseen and regulated by the State Department because it is an issue of national security and decisions about it should be made through the lense of safeguarding the public as opposed to through a business oriented lense.

no more thoughts and prayers. enough people have died from guns wielded by people who should not have firearms. Until you can come up with foolproof ways for guns to be ONLY in the hands of those who are deemed responsible to use them correctly and not kill journalists, party goers, teen agers, concert attendees, their fellow employees and elementary school children, church-goers and people on the street, then sensible precautions such as no bump stocks, closing the gaps on ways to automatize weapons, the size of ammunition clips and close the gaps on who can own and buy a weapon, then my rights are violated whenever people can obtain weapons, accessories and ammunition without problem. By the way, I am a gun owner. There are at least three guns in this household. We do not feel are rights are lessened by sensible gun regulations. We feel our rights are violated every time guns are used to slaughter innocent people and we must, once again, explain to our friends why we own guns. Get it together and limit those items which have nothing to do with hunting animals but are used exclusively to hunt and KILL human beings.

General Comment

This is a bad idea. Since when are firearms, especially civilian owned AR15s not part of the US Munitions list when the identical rounds and virtually identical weapons are used by our military and law enforcement? Let's just rely on the usual scare politics of the GOP and President to sell weapons. A change in the laws and management is not required. For the record I am a gun owner and think there should be more regulation not less as I know what guns do and how to use them. I would start with mandatory training certificates for anyone getting a gun like a driver's license. Then those in possession of weapons illegally owned could have them impounded, just as we impound cars that are not operated by a licensed operator and the guns can be retrieved when the owners have gotten or renewed their license.

General Comment

For our safety, control of firearms does NOT belong under the Department of Commerce. The US State Department is the only department that can control firearms for our safety. The Department of Commerce will do business with the highest bidder with no regard to human life. It is there to make money, not safety.

I forcefully oppose the rule change that would swap the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The ramifications of increased firearms change can be far deeper than just selling more freely. The political consequences could be enormous!! Imagine a thousand anarchies rising that would rival the problems we saw in Somalia, such as sea piracy and many others we have not yet imagined!!! DO NOT APPROVE THE CHANGE!!!!

I urge you NOT to switch oversight of the regulations on firearms export from the U.S. State Department to the U.S. Commerce Department. We should be deeply concerned that gun sales make not only our own citizens less safe, but also the citizens of those countries to which we sell the guns made in the US.

As a Mom who votes, I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This is turning our plowshares into swords, and selling them globally. We don't need to unleash the greed of the US gun industry on the world. The US Commerce Department only cares about material gain, not about security.

The last thing the U.S. needs is to make it easier for businesses to supply powerful assault weapons to the world's most unstable munitions buyers. Do not enact this legislation because it:

- *Treats semi-automatic assault rifles - developed for wartime use - as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
 - *Eliminates Congressional oversight for important gun export deals.
 - *Transfers the cost of processing licenses from gun manufacturers to taxpayers.
 - *Removes statutory license requirements for brokers, increasing risk of trafficking.
 - *Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
 - *Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have the resources to enforce export controls, even now. This exemption for a new manufacturing technology cannot be applied to weapons production, if we are to consider ourselves as Americans responsible world diplomats.
 - *Reduces transparency and reporting on gun exports.
 - *Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.
- Do not re-direct us on a path to a more violent world, particularly not with taxpayer dollars.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Guns are a product, but a very dangerous one. They need to remain under the auspices of the U.S. State Department's regulations. Guns are more carefully monitored for export by the State Department. The Commerce Department would regard the guns as it would any other good/product and only give minimal care in following the outflow and to whom. Do not change the firearms export regulations to the U.S. Commerce Department from the U.S. State Department!
Thank you for your consideration.

I am against moving the oversight of gun exports to the commerce department for these reasons:

- 1) It would end the State Departments ability to prevent high-risk transfers of arms.
- 2) It would compromise the United States ability to investigate and prosecute arms smugglers.
- 3) It would make it easier for U.S. firearms to reach terrorists, criminal organizations and corrupt and abusive foreign security forces.
- 4) It would erode existing global norms on firearms exports.
- 5) There are no public end-use reports on arms exports authorized by the Commerce Department such as those for exports authorized by the State Department. So, virtually the U. S. would be unable to identify key trafficking patterns that can help avoid risky arms transfers.

I oppose the rule change that would switch the regulation of firearms being exported from the U.S. State Department to the U.S. Commerce Department

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security

I believe in gun control, here and in other countries, especially control of assault weapons.

Firearms, Guns, Ammunition and Related Articles highly impact the safety of every person in the United States and around the world. The sale of weapons must be carefully controlled for the security of our citizens and our nation. Arming the countries that do not have strict gun control laws in place will result in truly putting guns in the hands of bad people. This change should not be made.

Is this really a good way to export American values around the world?

Isn't this just yet another result of powerful lobbying activities by gun manufacturers to increase sales?

What possible good can come of this other than increasing the profits of the gun industry?

Wouldn't it be better to promote American values in the form of diplomacy, educational exchanges, artistic exchanges?

We should be making it more difficult to obtain these weapons rather than easier if we are truly interested in a more peaceful world.

That is a ridiculous precedent. More guns means more mass killings. Less rules makes it easier to buy a gun, encourages the NRA, encourages more deaths in a country that leads the world on mass murders. What we really need is stronger gun control, a waiting time before buying a gun, stricter registration, etc. please do not do this.

General Comment

I oppose re-classifying these regulated weapons from where they are now: "military", under export regulation by the State Department, to the regulation by the Commerce Department. The Commerce Department does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. That means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. As "military", these regulated weapons are under the regulation of the State Department, and Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This rule change would make the world a far more dangerous place:

1 It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2 It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a

3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

U.S. firearms exported to Mexican police have been used in massacres and forced disappearances. We need international background checks to prevent gun exports to military and private groups that use them to commit violence or collude with organized crime.

At the core of these proposed changes is the mistaken belief that firearms do not merit tighter control because they are neither high-tech nor provide unique military advantages. In reality, these are some of the weapons most often used to commit abuses and extend conflict around the world. As such they deserve our highest scrutiny, not an easier path for sale and one without Congressional oversight. The policy continues the wrong-minded approach of the Trump administration to treat weapons as any other trade commodity, threatening to undermine long-term global security and true U.S. national security interests.

"The Trump administration's decision to relax regulations on the export of firearms will make it easier for terrorists, tyrants and criminal gangs to get their hands on the same dangerous firearms that have been used in mass shootings in the United States. This is a victory for the NRA and the gun industry and a loss for everyone else. Relaxing regulations on many firearms by putting them under the jurisdiction of the Commerce Department rather than the Department of State will make it harder to track where these weapons end up, and therefore easier for them to be diverted into the wrong hands. To make matters worse, Congress would no longer even be notified of major firearms exports, making it harder to do things like limit sales to the police in the Philippines who have been involved in assassinations of their own citizens -- as Sen. Ben Cardin, who blocked such sales in the past, has noted.

O, let America be America again --
The land that never has been yet --
And yet must be -- the land where every [one] is free.
Langston Hughes, Let America Be America Again

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Guns are an epidemic. Guns are a daily act of terrorism. Guns are a direct threat to our democracy. These facts require direct and significant action immediately. I am only able to support legislators and the parties they are members of that support aggressive gun regulation legislation.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

General Comment

What this country needs is not easier to obtain and more widely available guns We need to have stricter background check regulations, not just for gun stores but for on-line sales and gun shows. We need to keep assault-style weapons out of the hands of non-military, non-law enforcement people. No one needs such weapons for hunting or self-defense. I know it would be impossible to get all of these weapons off the streets but other countries have drastically reduced their prevalence by such things as buy-back programs.

General Comment

The greedy NRA wants to spread our gospel of guns to places outside of the US and infect their homicidal lust for violence, death and mayhem on other societies now? Their filthy obsession for profit knows no bounds! No-- no laws should be changed to allow their anti-Christian spread of violence over the entire earth! Isn't it bad enough that we have our children going to schools where they are sitting ducks in the NRA shooting gallery-- must we export death now?

I oppose transferring authority to regulate firearms like semi-automatic weapons from the State Department to the Commerce Department. Commerce is concerned with promoting American business of whatever kind, not in asking whether its in our national interest for particular countries or buyers to be able to obtain such weapons.

All firearms are weapons, and should therefore be regulated by a governing body concerned with safety. To falsely label guns as regular commercial goods will put even more people's lives in jeopardy. This proposed rule change is morally and ethically wrong, and should be discarded immediately.

Keep the oversight of commercial firearm exports with the U.S. Department of State.

Transferring responsibility for reviewing licenses to export certain types of weapons including assault-style rifles and pistols and armor-piercing sniper rifles away from the State Department would make it easier for U.S. firearms and related ammunition to reach terrorists, criminal organizations and corrupt and abusive foreign security forces.

General Comment

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This amounts to a move from guns for national security to guns as international business. Guns should only be used by armed forces during a direct attack and should only be sold for the purpose of protecting our nation. Individuals are less safe because of the people's right to bear arms. American gun manufacturers should stop selling guns to our citizens and to other countries for their profit alone. People should come before profits. And war needs to stop being a business venture.

General Comment

This action Eliminates Congressional oversight for important gun export deals. Very bad idea. It Transfers the cost of processing licenses from gun manufacturers to taxpayers. Bad idea for taxpayers. This Removes statutory license requirements for brokers, increasing risk of trafficking. Bery stupid idea. It also Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating regulation .Dumb move.

I oppose this change that would switch regulations of firearms export from U.S. State Dept. to the U.S. Commerce Dept. Please keep our country and our children safe with common sense about what what's really important and what real human rights are worth fighting for - "life, liberty, and the pursuit of happiness" does not coincide with worries for safety from increased national and international gun sales.

I strongly oppose this export rule change from the Department of State to the Dept. of Commerce. This move on the part of Trump is a glaring example of his unwholesome intentions regarding an already extremist gun culture in the US. i have always thought that Trump will eventually mobilize his base to begin his American style pogrom to facilitate nationwide terror and a state of authoritarian tyranny.

Not only does this sinister change in the status of munitions under the United States Munitions List deeply concern me but also the reality that there are already far too many guns in the hands of those who should not have them especially given the huge numbers of suicide by firearms on a yearly basis and the almost daily mass shootings occurring everywhere in the US.

I generally oppose regs that would make it easier to export guns from the US so I oppose any changes to current rules and regs.

Ex, Congress no longer being notified about large weapons sales is not acceptable.

The changes would present fewer obstacles for crime organizations to purchase large caches of weapons.

Removing liscensing requirements is also a problem in my opinion.

None of the rule changes are acceptable and I urge you to oppose them.

Thank you

I believe gun ownership needs warranted control in the United States. This is not the wild west and how many guns does one person need. We are killing our population and innocent citizens. Everyone talks about the mentally ill and guns. Everyone is sane until they are insane. Sane people buy the guns and then some event in their life happens and makes them insane and they have guns and decide to go do a shoot up of innocent people. A sane person with a gun does not make it any safer. I implore you to seriously think about and continue to control firearms, guns, ammunition and related articles under the United States Munitions List.

I oppose this rule change that would move the regulation of firearms exports from the State Department to the Commerce Department. The sale of guns to businesses or governments in other countries is the proper concern of the State Department because it is a national security issue. The Commerce Department is going to look at it from a business point of view. Profit is not everything. I do not want US arms companies to sell weapons of any sort to governments or groups that are unfriendly to us.

Guns are dangerous and we all know that in the wrong hands many can die. Stricter gun laws need to be implemented and utilized to keep people safe.

Guns are not safe unless the owners keep them under lock and key. They should never be left out so anyone can get their hands on them to use them for killing.

Lives are so important and guns themselves don't kill, if they are in the wrong hands they can kill anyone and everyone that comes into their view.

The American people want to feel safe and secure. The children are scared to go to school for fear they will never come home to be with their families again.

It's time to make laws that keep American's safe and feel secure where ever they go, and what ever they do, including the children.

It 's time NOW to come together and make life safer and more secure for the American people. Tougher laws are the way to go and what needs to be done.

General Comment

As a concerned citizen, I oppose the NRA's push to move export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. I believe this transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Right now, firearms exports are classified as military", which allows Congress to block sales of large batches of firearms to foreign countries. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. In addition, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Finally, this rule change would eliminate some very important State Department programs, including; the State Departments Blue Lantern program, the licensing program for brokers, and the block on 3D printing of firearms. The bottom line is that firearms are extremely dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Exporting items intended to kill human beings to other countries requires the oversight of the Department charged with understanding other nations and cultures, not the Department charged with selling whatever the market will bear. Arming foreign people without understanding the consequences to them and us is an appallingly poor policy.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I believe it will result in the unnecessary marketing of firearms by the US govt. There are already too many firearms in the world as it is. I dont believe the firearm industry needs any support from the US govt to market firearms especially in light of the fact that this industry has been instrumental in blocking any legislation to protect US citizens from the misuse of firearms for violenc.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

We VEHEMENTLY OPPOSE the NRA's UNETHICAL and UNCONSCIONABLE rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. To make MONEY from profiting off the military-style weaponry that has KILLED so many innocent MEN, WOMEN, and CHILDREN already in this country and exporting this VIOLENT and MASS- MURDERING MEANS OF DEATH and DESTRUCTION ABROAD is BEYOND SENSIBLE! ENOUGH of this MAYHEM and CHAOS of GUNS!

Please do not put the sale of guns in an easy access situation with no oversight and regulation. I am very concerned that unregulated sales are going to kill more people than ever, especially in the U.S., where gun violence is very high. As a grandmother, I can tell you that our grandchildren don't feel safe in school. Don't let the NRA become even more powerful. They only care about power and money, not our rights to be safe.

General Comment

The U.S. State Department must retain this authority. Gun violence is rampant enough in this country. An unwise move like this one is exactly what the NRA wants. Do not shift this responsibility to the U.S. Commerce Department.

There is a reason - both national security AND protection of our troops abroad - for having control of exporting arms in the State Department. Having in the Commerce allows business interests to rule. The last thing we need is U.S. manufactured arms used against Americans and our allies. Use your common sense - not greed!

General Comment

This rule change moves the handling of firearms away from an institution which exists to safeguard our nation into the hands of one whose purpose is to promote American business. It poses a serious threat to national and personal security: the Dept. Of Commerce is woefully inappropriate for serving in this capacity.

General Comment

The selling and buying of automatic and semiautomatic weapons should not be a business but should be controlled. How can we let this become a common business while distributing these weapons world wide. We already have a huge problem of control of these weapons in the United States. All we need to do is look at all the shootings in this year alone to see that there is no need for military type weapons sold to whoever wants one. Why spread such pain to other countries? Please, no more easy to obtain tactical weapons. Thank You.

General Comment

Evidence exists that guns are in the hands of the wrong people. The mass shootings that have happened in the last years is indicative of problems with control of guns, and particularly assault weapons. The need for these weapons is very limited and nearly never called for. These weapons create problems rather than addressing them or solving them.

General Comment

Please make sure that the proposed rule change DOES NOT:

Treat semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminate Congressional oversight for important gun export deals.

Transfer the cost of processing licenses from gun manufacturers to taxpayers.

Remove statutory license requirements for brokers, increasing risk of trafficking.

Reduce or eliminate end-use controls, such as State Depts Blue Lantern program, or eliminates registration of firearms exporters.

Enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Give the Commerce Department the responsibility to enforce export controls over semi-automatic assault rifles.

Reduce transparency and reporting on gun exports.

Transfer gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I oppose this rule change - Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML). This change is very unwise in terms of our country's security. It's bad enough that we have so many semiautomatic assault weapons in our country - now we're going to export this problem to other countries? Keep the control in the hands of the U.S. State Department. Isn't security more important than gun sales???

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It's simply common sense that if a person wants to own a gun, they MUST take gun safety lessons, and they must take shooting classes. The ONLY place that should be ALLOWED to SELL guns, is a gun dealers. NO MORE STOPPING BY AT A GUN SHOW & WALKING OUT WITH A GUN! It's NOT normal!! I am not trying to take away anyone's 2A right. But this random & casual we treat guns MUST STOP!

Do you know that Mexico has only ONE gun shop! ONE!! The US is smuggling guns into Mexico.

General Comment

This new rule would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international terrorists and criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of the gun industry. I am appalled at this administrations capitulation to the gun lobby which is now turning to the international market as gun sales decline in the US. I am concerned that the proposed rule does not adequately address our national security, foreign policy, international crime and terrorist threats. Congress and the public must be able to understand the impact of these rules on potential firearm exports. The proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Public comment 662. Individual. B.L. Melton. 7-7-18

Submitter Information

Name: B.L. Melton

General Comment

I oppose the proposed change of export licencies from the State Department to the Commerce Department. This transfer includes assault weapons and other powerful firearms and will make it easier to export U.S. guns and ammunition globally. These exported firearms are already being used in crimes, attacks and human rights violations in many other nations.

A change to the Commerce Department will increase the number of export applicants by 10,000 annually, according to the Dept. of Commerce estimates. This change will only benefit the arms business, and cause many more deaths and destruction worldwide.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S.

Commerce Department. What is the purpose of making this change -- the export of many more firearms, including weapons

of mass murder? Isn't it enough that America is drenched in privately-owned guns -- including assault rifles -- and suffers

from the highest rates of gun violence and gun deaths in the world -- by a mile? We want to infect the rest of the world with

our unique kind of insanity? Well I say "NO we do not!"

When is the federal government not going to be an instrument of manufacturers of implements for killing humans? Our country afflicted by the insane notion that the more people having guns the better.

I am completely AGAINST our country exporting this madness of free-for-all selling of guns.

Do NOT change the supervision of selling arms abroad from the State Dept. to the Commerce Dept.

General Comment

The sole purpose of a gun is to maim and/or kill at a distance quickly and efficiently. Any argument of what physically does the killing demonstrates a distinct mental disconnect. As such treating what amounts to murder and attempted murder, regardless of the excuse, as a business model is immoral and foolhardy in the extreme. I strongly oppose any rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I am opposed to the rule change that would change the regulations of firearms export from the US State Dept. to the Commerce Dept. The State Dept focuses on safeguarding the nation, selling arms abroad has a huge impact on national security. The violence in Central America is fueled by arms from the US, leading to the flood of refugees on our southern border. The Commerce Dept. only answers to big business, they do not care enough about nation security.

The greed of the gun industry, the NRA, and all legislators and agencies who enable them is literally killing Americans. NO Amendment was ever intended to have this result. Stop choosing money over life! No rule that removes guns or accessories from any control list - ALL firearms, guns, and ammo warrant control under Federal lists and regulations.

General Comment

With the neverending rash of gun violence in America, like no other country on the planet, the last thing we need is more guns. This is not a mental health issue - other countries have the same percentages of people with mental health concerns but they don't have the gun violence because they don't have the guns. Guns ARE the problem. The NRA wants more guns on the streets and in the hands of everybody because it means more money for them, plain and simple. They promote the proliferation of guns which results in more gun violence. And they're at the point where they are releasing dangerous videos that are meant to incite violence. The NRA has become a terrorist group and needs to be reigned in. If declared a terrorist organization, all of its members could then be banned from owning guns, which would either get rid of a LOT of guns, or else, force members to quit the NRA, effectively shutting them down. It's a win-win. Yes, this is probably nothing but a dream, but so is living in a country where kids don't have to fear being shot going to school or a concert or a movie or church.

Thank you for letting me express my concerns over an issue that must be dealt with besides offering thoughts and prayers. The time to do something, everything, is now.

General Comment

I am all for promoting American businesses and products worldwide. However, I am opposed to efforts to make it easier to export American firearms to foreign countries. American-made weapons are already fueling violence in Mexico and Central America. The more guns we send to our neighbors on our southern border, the more refugees and asylum-seekers will come into our country. Americas gun-related crime problem is not something we should be promoting to other countries.

ASSAULT WEAPONS ARE MEANT TO PUT BULLETS INTO YOUR BODY AND MURDER YOU. AND ME. THERE IS NO PLACE ON THIS PLANET FOR SUCH WEAPONS. THIS IS DIFFERENT FROM USING A RIFLE TO HUNT PHEASANTS.

THE SECOND AMENDMENT WAS NOT PUT IN PLACE SO THAT PERSONS CAN HAVE A LETHAL WEAPON IN THEIR HOME. SUCH WEAPONS HAVE ONE MAIN APPLICATION: TO HARM THOSE WHO LIVE IN THE HOME! THEY ARE MUCH MORE LIKELY TO BE USED AGAINST THE PEOPLE WHO OWN THEM AND HAVE THEM IN THEIR HOME THAN AGAINST AN INTRUDER.

A MORE EFFECTIVE WAY TO DEAL WITH INTRUDERS IS THROUGH NONVIOLENT MEANS. IN FACT, NONVIOLENT MEANS FOR CONFLICT RESOLUTION IS THE CIVILIZED WAY OF DEALING WITH CONFLICT, RATHER THAN THE USE OF FORCE. LET THOSE COMPANIES THAT SPECIALIZE IN SALE OF GUNS, SWITCH TO NONVIOLENT MEANS OF CONFLICT RESOLUTION. IT IS WAY PAST THE TIME FOR US AS CIVILIZED HUMANS TO SOLVE OUR DIFFERENCES BY DECIDING WHO IS STRONGER. RATHER THAN

A major issue with guns is prevalent in todays America due to the complete and total laxity of gun weaponry control. Weaponry available to the military should not now and should have never been made available to the general public or to public servants such as police officers. Mass killing of United States citizens is not only out of control but is due to gun control laxity. We need more gun control, not less.

General Comment

I join all those Americans who ask you to reject this proposed rule.

This proposal would make it easier to export U.S. guns and ammunition globally, even though U.S.- exported firearms are already used in many crimes, attacks and human rights violations in many other nations.

There are many problems with this proposal, including it:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

PLEASE REJECT THIS PROPOSAL!

General Comment

Allowing the Commerce Department to control the sales of assault weapons and weapons in general to overseas customers is a recipe for disaster. They are not setup for the proper vetting of those customers to insure that they are not acting as middlemen for terrorists or other subversive entities that will use them against our troops or our allies or, even worse, civilian populations. That scenario is so likely as to be a virtual certainty, That puts the United States in the position of supporting international terrorism just like those hated Islam states we love to bash.

Changing the control of exported weapons to the department of commerce will decrease the safety of civilians all over the globe. Already the import of drugs is paid for by the export of weapons, leading to the violence in Mexico and Central America, and contributing to the number of recent refugees seeking asylum!

The Commerce Department does not have the resources adequately to enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Firearm exports should continue to be regulated by the State Department. There is a compelling reason they are, and have long been, regulated by State.

General Comment

The State Department should retain control of the regulation of firearms.

Firearms are classified as "military" for good reason, they are not "normal" goods.

They are in need of much more regulation, and that regulation should remain with the State Department, not be moved to the Department of Commerce.

General Comment

We certainly don't need to support any plans for the worldwide spread of the embarrassing level of carnage that is the result of the availability of weapons of war to virtually anyone who has the money to buy them in the United States. The American obsession with the Second Amendment is the result of the Republican's use of it as a ploy to get votes and to drive a wedge between their base and those who support sensible controls on who can purchase weapons and on the kinds of weapons that should be available for sale to the average person. It is also a cover for the weapons industry to reap huge profits from the sale of products whose only purpose is to cause the death of fellow humans while using the Constitution as a distraction.

A careful reading of the Second Amendment proves that it was never intended to allow for unrestricted access to any type of weapons that might become available. It has been deliberately misconstrued to suit the purpose of the Republican Party and for use as a marketing tool with which the weapons manufacturers could increase sales and reap huge profits. The weapons industry no longer depends only on sales to the military and on wars to generate profits. One needs only to look at the correlation between increased weapons sales and the mere mention of any kind of gun control legislation to observe this mis-use of the Second Amendment. America quite simply shouldn't be responsible for the increased loss of lives on a worldwide level just to satisfy the greed of those who would profit from unrestricted weapons sales. This nation already has enough blood on its hands, blood that was needlessly shed as a result of profit generating schemes like this. It is time to stop inflicting our brand of 'capitalism' on the people of this planet; we have become the problem.

General Comment

I am a parent, educator, retiree and my wife and I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, DC, and several large retail chains also prohibit retail sale of semi-automatic assault rifles.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey. Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. Senators have explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. Taxpayers will absorb the cost of reviewing applications and processing licenses.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

The rule reduces controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.

Thank you

General Comment

Firearms of all kinds need more control, not less. Echoing Gary Patton, "the change in regulations controlling the distribution of firearms overseas is a transparent and cynical effort to boost gun sales during a down market. Making a profit based on the spilling of blood of others is truly immoral and despicable."

General Comment

I respectfully request that this proposed rule change be defeated. Among the reasons are that it

- 1.Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- 2.Eliminates Congressional oversight for important gun export deals.
- 3.Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- 4.Removes statutory license requirements for brokers, increasing risk of trafficking.
- 5.Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- 6.Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- 7.The Commerce Department does not have the resources to enforce export controls, even now.
- 8.Reduces transparency and reporting on gun exports.
- 9.Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Points 1 and 9 above are especially compelling. We definitely should not export our gun violence problems to the rest of the world.

This is a bad idea because the U.S. State Department needs to be able to keep track of weapons being exported with the amount of ammunition and things like bump stocks so they do not come back to harm Americans in the future in the U.S. and abroad. This is another sign that this administration only cares about corporations and not the well being of Americans.

"It is putting the fox in charge of the hen house!"

Weapons are for defense or offense. Making them simply another item of trade denies their deadly potential. If we sell automatic and semiautomatic weapons to the world, those weapons will be used to kill Americans. Let's not arm our enemies.

you all are not caring about who gets hurt or killed from these assholes that get a hold of any kind of firearms. there needs to be a big limitation on who and get guns and ammo. there's way 2 many people that abuse and use their hatred over others and they get what ever they want and that's unacceptable. the only people I really think that needs any kind of guns is our armed forces and police depts. that's all, but I know there's a lot of people that go out hunting animals for food. there needs to b a lot of limitations on getting things besides just a background checks like a polygraph test to ask questions of why they want a gun in the 1st place. if theres anything that comes back on background check they get nothing. if the polygraph test comes back that something isn't right then nothing, etc. they should have 2 pass a lot of things before they get anything at all.

General Comment

The NRA and gun manufacturers want guns EVERYWHERE, and not just here in the United States, but around the world. The NRA scumbags are pushing hard for a rule change that would move the handling of export licenses of semi-automatic ASSAULT weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This CORRUPT transfer of authority WILL open new floodgates for arms sales internationally, with serious NEGATIVE and DANGEROUS implications for our national security.

I vehemently OPPOSE this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Especially at a time when there are TRAITORS in the White House!

General Comment

Whether we can successfully repel rebels armed with these weapons is not the only issue. We need to consider what they do to areas where the weapons are sold. Numerous countries have been devastated by the abundance of weapons that inevitably fall into the wrong hands. And both here and in Europe, countries that have remained stable are overwhelmed by refugees understandably fleeing the violence. There is also the factor that when people around the world learn that the weapons that caused all this misery were U.S. made, they understandably hate us.

General Comment

I oppose the move of ITAR from DOS to DOC. We cannot control the use of these guns by our own homegrown terrorists, especially the ones used by our military or designed for them like the AR-15. We need to get our house in order. Contrary to what the President thinks, the United States does not need to be like Russia. This appeases his gun lobby & benefits Mr. Trump politically, but that is just a small fraction of the population & it has no consequential benefits for this country. Those arms could be a detriment in another country if sold to the wrong hands. Mr. Trump wouldn't have to come up with schemes like this if he actually understood International Trade & didn't alienate our closest allies, like Canada who we had a trade deficit with before another one of his bright ideas. These arms won't make up for millions of dollars. I'm praying that someone in this government has control in this case, uses common sense & acts responsibly.

Do not change responsibility for regulating sales of non-military weapons and ammunition to foreign actors from State Dept to Commerce Dept. This will not even save money in the short term based on information provided despite claiming so. Let the State Dept do their job of ensuring weapons are not sold to the wrong people.

I am opposed to moving government oversight on international gun sales and licensing to the Commerce department. National security as overseen by the State department is the appropriate place to safeguard and value the public's interest over the lobbying efforts of the gun industry.. It would be a massive error and a dereliction of duty to shift the government's interest from national security to the promotion of gun sales abroad.

The thing NOT to do when the opportunistic bullies threaten Americans is to arm ourselves with weapons we neither understand nor have skills to use. Guns should be regulated as tightly as are automobiles: Registration, passing written and applied skills testing for licensure, prosecution of "vehicular homicide" . . . What do you do when the Mens Rea is a vacant mind?

I am against this rule change that would put control of firearms and related content export into the jurisdiction of the

US Commerce Department from the US State Department.

This is a foolhardy decision that would endanger our national and international security because it could be used by potential terrorists as well as organized crime against the USA and our allies, which could lead to a more fractured and strained global relations situation than what we have now (thanks to Trump and his ill informed decisions).

Weakening gun control measures by ANY MEASURE at this point in time is absolute insanity. The US is the ONLY nation in the world that has regular mass shootings, this has got to stop now. How do gun rights measure up to the freedom to live, to survive, in peace??? We need more and thoughtful gun control measures, immediately! It's an infringement on MY rights as a patent and a human being to loosen gun tegs. Get it together, people!!

General Comment

The proposed change allowing the Department of Commerce to oversee gun exports instead of the State Department is unnecessary & unacceptable. One of the primary missions of the Commerce Department is to promote US-made goods abroad without respect to other policy considerations such as security & public safety. The State Department (at least when it was staffed & had a sane person at the top) is much better suited to making the qualitative decisions required when considering the export of guns & munitions. The most important issue is NOT accommodating & supporting the export of gun & munitions manufacturers' products, rather it is proper review of whether the export of these goods is sensible & supportive of our national security & the public safety. In most cases i would argue it is not in our national interest to accommodate & encourage the export of guns & munitions whether for consumer sales or to foreign governments. It's just not the right thing to do.

Please reject this proposed rule change & help to maintain a sane & thorough review by the State Department of ALL the relevant issues when gun and/or munitions exports are proposed.

Thank you for your consideration.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I am concerned about facilitating the export of small arms by putting regulation in the hands of an agency whose job is to promote US products.

General Comment

I oppose the transfer of firearm export authority from the State Dept. to the Commerce Dept. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

The problem with indiscriminately arming nations is like the weather: If you like a current regime, wait a decade or two and it will change--often to one opposed to the United States. Accordingly, the decision whether to arm a regime is better assessed by the State Department than the Commerce Department, whose emphasis is promoting trade. The proposed rule is short-sighted and should be rejected.

Against this proposed change.

Treats semi-automatic assault rifles as non-military

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

I can't believe any caring individual would want MORE guns on the streets! The question should be how do we get fewer guns. Countries that don't allow rampant purchase & use of guns, don't have the epidemic of school/workplace/mall shootings that the US does. Wake up! Guns are a privilege, not a right & come with responsibilities, which a great many folks don't realize.

General Comment

It appears that much of the energy behind the so-called 2nd amendment movement that works against any and all forms of gun control is coming from the gun manufacturing industry itself. The industry is simply trying to create business for itself regardless of what the consequences are. This is downright sociopathic behavior that the rest of us need to stop enabling and accepting now before things get even worse. The wild west did not have the gun violence that we have today! I am a gun owner myself (Remington 870 tactical pump-action shotgun), but I fully support common-sense gun control and I reject the argument that any gun control will lead to the loss of the right to bear arms.

One thing we can do to improve the current situation, or at least make it no worse, is to prevent the sale of powerful guns and gun accessories to other countries. Our gun policies have made a mess of things here, so we should not try to export them to others. We should not be changing the rules to switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department, which sounds uncomfortably close to me like switching from looking at guns with the right amount of care and respect to a situation where we will sell anything to the highest bidder regardless of who that bidder may be.

Don't change the rules and open up international gun sales. We are making ourselves enough of an international

bad guy
as it is.

General Comment

The oversight of weapons sales, whether national or international, is a an issue of safety. Weapons cannot be separated from the consequences of wounding and killing. That is why these sales are currently handled by the State Dept. To change oversight of weapons sales to the Commerce Department is to cater to the business of those who would profit from these arms sales, regardless of the consequences. I believe Americans seek a higher standard - that of caring about consequences - than a business model of killing and maiming.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I oppose switching the regulation of firearms exports from the State Department to the Commerce Department because it would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. Exports such as these belong to the State Department to handle. This is not commerce - this is exploitation by a lobbying organization to spread its influence around the world without regard to public safety. We need to reduce gun violence. Changing this regulation from the U.S. State Department to the U.S. Commerce Department effectively increases gun violence. This MUST NOT HAPPEN.

This seems like a particularly bad idea to me. These firearms are not only for the hunting enthusiast and hobbyist, but are used as weapons of conflict across the world. That would be the purview of the State Department, not the Commerce Dept. I respect the right of American citizens to own guns, but I do not want to provide the gun industry any greater latitude in their lucrative business of selling weapons around the world.

Dear State and Commerce Departments,

I am deeply concerned by your proposal to move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

We should learn from our previous mistakes. Even when we have personally trained groups that we considered allied with our cause in the use of weapons, it has come back to haunt us, whether it was in Afghanistan or Central America. It is in our best interest to reduce the availability of dangerous firearms throughout the world rather than escalate it.

Thank you,

Julie Bernstein

General Comment

As a taxpaying, American citizen I am vehemently opposed to this proposed rule change to move the handling of export licenses of semi-automatic assault-type weapons and other powerful firearms from the State Department to the US Commerce Department, Bureau of Industry and Security.

This is foolhardy and clearly not in the interests of national security. Such a move would mean Congress would not be automatically informed of the sale of large caches of firearms to foreign countries. No prudent person would think giving private arms companies the go-ahead to sell dangerous weapons overseas without proper vetting is a good idea. Furthermore, the Bureau of Industry and Security does not have the resources to adequately enforce export controls.

Largely unregulated arms sales could endanger our national interests and security. Lack of oversight would permit arms sales to anyone, including our enemies. Furthermore, why would we want to threaten world stability and undermine our own global diplomacy as well as that of our allies?

I think that trail leads to the National Rifle Association and its lobbyists. This transfer of authority must not be approved; to do so, is to embrace an unethical and inhumane practice which will only smear our international reputation and harm our diplomatic efforts for peace. Please retain administration of export licenses with the State Department. Peace over profits.

Guns are not necessary for a comfortable life. They should not be a commodity, they should be likened to a drug that needs to be regulated. People should not be able to kill one another so easily. Especially automatic or semi-automatic style weapons, they are machines of war that should not be available to the public at all, and definitely not sold abroad where they can't be regulated and kept out of terrorist hands.

General Comment

The NRA & gun manufacturers are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). My country does NOT need to be in the business of supplying guns around the world! When we can see the distressing result that gun ownership has had on this country, WHY DO WE WISH THIS RESULT ON THEM? No more guns!!

General Comment

I strongly oppose moving oversight of firearm export licensing from the Department of State to the Department of Commerce.

The proposed rule change treats semiautomatic weapons as "non-military," which is absurd. Moreover, the proposed rule

eliminates Congressional oversight of gun export deals, transfers the cost of processing licenses from gun manufacturers to

tax payers, and enables unchecked gun production in the U.S. and exports abroad by removing the block of 3D printing of

firearms. The proposal reduces transparency and reporting on gun exports and transfers gun export licensing from an agency

with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which

lacks the resources to adequately enforce export controls.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism,

and human rights violations. They should be subject to more controls, not fewer.

General Comment

I am writing in response to the proposed policy to make it easier to export U.S. guns and ammunition globally and the move of export licensing from the State Department to the Commerce Department. We do not need to make it easier to export guns. There are enough in the world. The only reason for this proposed changes is to benefit the gun lobby. Here are other reasons why this should not happen:

- It treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- It eliminates Congressional oversight for important gun export deals.
- It transfers the cost of processing licenses from gun manufacturers to taxpayers.
- It removes statutory license requirements for brokers, increasing risk of trafficking.
- It enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- It reduces transparency and reporting on gun exports.
- It transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

All of these reasons make this policy change ridiculous and terrifying. Please please do not allow this policy to go through. We have enough gun violence all over the world. Why create an even easier path to gun violence and human rights violations?

Thank you,
Meredith Roach

General Comment

I OPPOSE the proposal. It would make America LESS SAFE. The proposal weakens controls over semiautomatic assault weapons including AR-15s and AK-47s, 50 caliber sniper rifles, and high-capacity ammunition magazines. It may also deregulate 3D printing of guns and could ultimately weaken controls on firearm imports. The proposed transfer will likely lead to more U.S. guns getting into the hands of criminal organizations, human rights abusers, and terrorist groups. The proposed rules are a priority for the National Rifle Association and the National Shooting Sports Foundation (the official trade association for the firearms industry) who want to open up international markets to compensate for lagging domestic gun sales.

In order to accurately and adequately account for the direct correlation between firearms possession and the violence associated with it, 'repeal' the "Dickey Amendment" barring the national Center for Disease Control and Prevention (CDC) from studying firearms violence. Seems simple, does it not?

General Comment

I am writing to voice my strong opposition to the proposed rule to transfer oversight of small arms (firearms) exports from the State Department to the Commerce Department. This rule would make U.S. exports of small arms more dangerous by transferring controls to an agency that prioritizes business interests over national security. The rules elimination of congressional oversight of commercial weapons sales of \$1 million or more is also concerning. This rule seems designed to create profits for the U.S. gun industry. The rules description of semiautomatic assault rifles like the AR-15 as civilian products is also concerning. These weapons were designed to kill en masse on the battlefield. That is why they are the weapons of choice for mass shooters. Please do not go forward with this dangerous policy.

We need FEWER guns, and tighter controls over who gets them. there is no need for automatic or semi-automatic rifles to be readily available, or really any need for basically anyone aside from the military to own/have.

Therefore, I OPPOSE this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Not only is this an issue of national security but I believe we have a moral obligation not to export weapons intended to kill other human beings. Our gun record in the United States is abysmal. We have to deal with that here and not export that kind of possibility to other countries ...

I believe the USML should remain as it is now. The rule change from State to Commerce is dangerous and should not be implemented.

The change would facilitate firearm exports landing in terrorist or criminal organizations and into the hands of repressive regimes. This must be stopped for international safety concerns and not be done by a presidential whim.

Another citizen opposed to moving supervision of firearms/ ammunition regulations from the State Department to the Commerce Department. What are you thinking? Commerce is about selling things, generally to foreign markets. Are we only interested in promoting sales of firearms and ammunition? The State Department has been and obviously continues to be the agency of choice in this matter.

General Comment

I am opposed to the Trump administration proposal to make it easier to export U.S. guns and ammunition globally, even though U.S.- exported firearms are already used in many crimes, attacks and human rights violations in many other nations. These are the reasons that I am concerned:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

The Trump administration proposal applies to assault weapons and other powerful firearms, moving export licenses from the State Department to the Commerce Department. The U.S. gun lobby has advocated for these policies. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually. The fact that this proposal applies to assault weapons and other powerful firearms typically used in the military is concerning in that terrorist organizations may be able to easily get their hands on these weapons. We do not need to increase the potential use of weapons whether they are here or exported abroad. Thank you for your consideration of this serious matter.

How about appointing a "literalist" to the Supreme Court? A judge who can tell the difference between the rights of "a well organized militia" from the rights of an ordinary citizen under that beloved second amendment to the Constitution so often (mis)applied by the American gun community?

General Comment

I oppose the proposed rule change because it will do the following:

- Treat semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminate Congressional oversight for important gun export deals.
- Transfer the cost of processing licenses from gun manufacturers to taxpayers.
- Remove statutory license requirements for brokers, increasing risk of trafficking.
- Reduce or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduce transparency and reporting on gun exports.
- Transfer gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Please oppose the proposed rule change. This matter was brought to my attention by Texas Gun Sense. Our country does not need reckless laws and rule changes such as these that undermine common sense gun safety. Thank you.

This is quite possibly the most dangerous idea that will affect all countries safety that I have read about in a while. It would be equivalent to advertising for people to commit more acts of violence because of the ease with which it would become to acquire sophisticated assault weapons. The only entities that benefit from such a reckless change of managing departments are the gun manufacturers. The implications of this are so catastrophic and wide ranging that the anticipated potential should be criminal and therefore halted.

Please stop the NRA backed rule and re-consider how your proposed regulations will change the face of safety in our society using the following points:

1. It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I am the mother of 5 children who deserve to be safe and protected. Please stop this!
A.S.

Hello,

If you're being mugged and you have a gun, would you hand it over to them? President Trump's proposal to lift the current regulations exports seems to be doing the same thing. I believe the the inherently military nature of these firearms means that the sale of them is an issue of national security. I feel very strongly that the gun export laws should stay as they are. Why would we make it easier for potential terrorists or international criminals to obtain lethal weapons?

Thank you for your time.

General Comment

The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry.

We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

The proposed changes in the rule regarding international arms regulations are RECKLESS. Lives around the world will be endangered by international and domestic criminals. It boggles the mind that an American administration can be so blind to the effect of these changes on the freedom of the traveling public to go anywhere without fear of gun violence; on the freedom of Americans to go about their business in their own country; and on the general safety of the world at large.

Please do not change these rules so drastically. They've been in place since 1940; they still work. You are hurting us, your constituents whom you promised and swore and oath to protect against all enemies, foreign and domestic. These rule changes violate that oath on every ground.

General Comment

I oppose this proposed rule for the following reasons, and for my belief that will make our world even for violent. Congress is shirking their responsibility to protect the American people.

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

I strongly oppose this proposal to transfer the oversight of weapons export from the State Dept. to the Commerce Dept. The change is only for the benefit of the gun manufacturers to increase their profits and to weaken law enforcement over firearms trafficking to shady gun dealers. The security of civilian citizens here and abroad would be at increased risk for the following reasons.

The proposed change treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Deregulation of weapons sales allows for the sale of weapons to a second buyer. This allows the weapons to be procured by terrorist organizations we are trying to stop. This benefits the military individual complex and the never-ending war but reduces national security.

General Comment

The Trump administration proposes changes to the agreements affecting the sale of weapons abroad, changes that I believe would make the world a more dangerous place. Please don't value commercial gain as more important than keeping all of us safe.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please do not dismantle important protections that have served us well and that we still need.

The proposed rule would loosen regulatory oversight of the export of firearms. Other than increasing the profits of arms manufacturers and distributors, there is no plausible rationale for reducing such oversight. Now more international terrorists, drug traffickers, and other kinds of criminals will have access to weaponry they shouldn't have. This is an ill-considered, dangerous rule, one that should not be implemented.

General Comment

We know that gun violence spreads like a virus, from one person/family to another and across communities and states. Simply being close to a gun increases the chances that you will be harmed, domestic violence, suicide or accidentally. Gun violence is an epidemic in America, spreading like a wildfire in California. Please don't export this violence to other countries which would make gun violence a pandemic, like the deadly flu in 1918. It was not a disease that could be controlled. This violence will circle back through America ten-fold and may revisit it's deadly effect on you or your family.

As a physician, I stabilize patients using the ABCs first, Airway, Breathing, Circulation, the most necessary functions to keep one's body alive. Sometimes that means we don't treat the cause of their emergency first. We stabilize the airway so they can get air in, we ensure they can oxygenate effectively and then we make sure their heart is working and their blood pressure is adequate to perfuse the brain. Once we know those major organs are taken care of, we can begin to search for a cause. First, we have to buy ourselves time to work. We can continue to about the causes of gun violence but first we have to stop the gun deaths and stabilize the situation to give ourselves time to come up with reasonable plans. For now, stop spreading the gun violence by making more guns, transporting more guns and making it easier to get guns, even temporarily. Ideally, if at least temporarily, HALT gun sales. There are more than enough guns on the market for people to sell to each other. Let's discuss this without all the rhetoric, without the NRA. Let's look at the science. Don't spread this epidemic. ABCs, stop the bleeding.

General Comment

I am very OPPOSED to the proposed regulation to move the firearms exports from the State Department to the Department of Commerce.

The State Departments oversight and regulatory authority is critical to our countrys safety by monitoring weapons domestically and those coming into this country. Since most types of firearms can be used for military and terrorist activities and they should remain under the scrutiny of the Department of State for our protection rather than Department of Commerce for promoting export of our goods with little oversight.

If the regulatory rule is changed, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns.

Additionally, the Commerce Department just does not have the resources to adequately enforce export controls which means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The end result is firearms will be exported to anyone with money.

For the safety of the people of our country and the world, PLEASE DO NOT approve this move.

This maybe the worst idea that has come out of this administration. Firearms, guns, weapons, and amunitions, among other related issues have absolutely no place being controlled/ regulated by the Commerce Department! Where else would you put guns, weapons, and amunitions accept under the United States MUNTIONS List, duh? The sale, transfer, and control of these items are definitely a reasonable threat to our security! Please, leave these on the Munitions List, where they most certainly belong!

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It violates the legal strictures governing the United States Munitions List. It exceeds the Administration's authority delegated to it by Congress. It subordinates the national interest to the economic interests of firearms manufacturers by moving administration of these regulations to a Cabinet department whose mission is trade promotion and business sales.

General Comment

There are two major problems with this rule change moving the handling of export licenses of semiautomatic assault and other firearms from the U.S. State Department to the U.S. Commerce Department. First, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security. Second, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere.

This rule change would, therefore, make it much easier for firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous groups and organizations to obtain large caches of American guns and ammo with which to commit their horrendous crimes.

This rule change should not take place in the best interests of both American security and moral conscience.

General Comment

Dear BIS:

I oppose the proposed rule for the following reasons:

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons. That will limit its ability to comment on related human rights concerns, as it recently did on the Philippines and Turkey.[2] Congressional action in 2002 required sales of firearms regulated by the US Munitions List valued at \$1 million or more be notified to Congress. Items moved to Commerce control would no longer be subject to such notification. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.[3] The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons,

the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.[4] The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in countries that are responsible for most of the increasing and record levels of homicides.[5] The export of these weapons should be subject to more controls, not less.

I strongly oppose this proposed rule, as it would make it easier for the US to export lethal weaponry and firearms. Whether intentionally or unintentionally, U.S.-made weapons often fall into the hands of global arms traffickers. Whether in Yemen, Niger, or Mexico, malicious actors such as terrorists, gangs, and cartels use these American products to sow fear and instability. Please, for the betterment of world security and the American reputation, do not allow this proposed rule to go forward.

First, we should not be exporting anything to any country where it is currently against the law to own or possess such an item. This action would undermine that country's right to their own sovereign rule.

Second, we have become the leading nation in the world in gun deaths, and we do not want to export that disease to any other country in the world.

Third, exporting these items will create enemies and the US at this point needs friends, not new enemies.

General Comment

Please block the administration's proposed rule that would loosen exports of firearms which could end up in the hands of criminals & terrorists. These weapons could then be used against US citizens.

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

As a responsible American citizen, I very much oppose any change that would move regulations of firearm or other weapon exports from the U.S. Department of State to the U.S. Department of Commerce. The U.S. has by far the world's highest rate of gunshot death and injury, including suicide, homicide, and accident. The rest of the world doesn't want our violent statistics, our guns, our fear, our pain. The rest of the world certainly doesn't want or need our semiautomatic weapons or firearms that can be converted to semiautomatic weapons. Say no to any such change.

As a gun-owning taxpayer, I am very concerned about this proposed change in policy. I'm especially concerned that this change eliminates Congressional oversight for important gun export deals. It reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and eliminates registration of firearms exporters, a requirement since the 1940s.

The Commerce Department does not have the resources to enforce export controls, even now. It reduces transparency and reporting on gun exports. It transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade. This does not seem to be in humanity's or our country's best interests.

General Comment

I vehemently oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. International firearms sales must remain classified as "military" and therefore under regulation by the State Department, so that Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, or to countries where there are serious human rights concerns.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. This would create an unacceptable proliferation of firearms in the hands of dangerous groups. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Further, the rule change would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would remove licensing requirements for brokers, increasing the risk of trafficking. It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Given the issues with gun violence and the trump Administration's attitude against immigration, this rule change would make two extremely bad situations much worse.

No, no, NO!!!! This rule change would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business). This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. I EXTREMELY STRONGLY OPPOSE this rule change which would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. For God's sake, WHAT ARE YOU THINKING????

I oppose the change of the regulation of semi-automatic assault weapons and other firearms, and guidelines passed from the United States State Department to the Department Of Commerce. I think this is a very bad idea, and could increase the probability of these items passing to people who could harm Americans abroad. I don't think the Dept. of Commerce has the manpower, or ability to regulate and administer these transactions in a precise and thorough manner.

General Comment

My 19 year old daughter was killed in a rampage shooting in 2001, so I know full well the tragic toll of gun violence. I also know that Americas gun homicide rate is more than 25 times the average of other high-income countries.

An analysis of gun homicide rates in developed countries those considered high-income by the World Bank found that the United States accounted for 46 percent of the population but 82 percent of the gun deaths.

The current proposal by the Trump administration would it easier to export U.S. guns and ammunition globally. I strongly object to America arming the world, especially with assault weapons and other powerful firearms. The proposal would move export licenses from the State Department to the Commerce Department. The Department of Commerce estimates that the transfer of authority will increase the number of export applicants by 10,000 annually.

I object to the proliferation of weapons used in war and crime in other countries. Specifically, I oppose the proposal for the following reasons:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have

substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

2. The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

3. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in Latin America, Africa, or many other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, the State Department has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. Commerce does not have these resources.

4. This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

5. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Thank you for considering my objections and concern. I ask that you reject this proposal.

I strongly oppose removing control of firearms, guns, ammunition and related articles from control under the United States Munitions list. This removal of control would decrease transparency and hamper the US Congress from automatically learning about and then deciding to block large sales of munitions to other countries or entities for national security purposes or because of human rights violations.

I do not think the Commerce dept has the staff or reach to adequately enforce export controls. This would result in some terrorist organizations and organized crime organizations gaining access to munitions that can be used against us.

Muddying the water only benefits the gun dealers and manufacturers and can only come back to harm US citizens.

Thank you for the opportunity to comment on the Proposed Rule: International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III.

I am a citizen and taxpayer extremely concerned about gun violence and national security, and feel strongly that the handling of export licenses of semiautomatic assault weapons and other powerful firearms should remain with the U.S. State Department rather than move to the U.S. Commerce Department, for the following reasons: This rule would transfer gun export licensing to an agency whose principle mission is to promote trade. Both assault weapons and non-semi-automatic weapons are used in large numbers by criminals around the world. Their export should continue to be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The proposed rule would transfer the cost of processing licenses from gun manufacturers to us, the taxpayers. Registration fees that are used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So, we the taxpayers will absorb the cost of reviewing applications and processing licenses when it should remain a cost that gun exporters pay.

The rule reduces end-use controls for gun exports in several ways. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It would eliminate registration of firearms exporters, which allows the State Department to check on an exporters history. Without use of this database, enforcement against arms trafficking will be seriously weakened. The Commerce Department does not compile information on human rights violations, so this rule would make it harder to deny weapons licenses to international human rights violators

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. Furthermore, Congressional oversight for important gun export deals would be eliminated. Congress will no longer be

automatically informed about sizable sales of these weapons. This would violate Congressional intent and effectively eliminate Congress proper role.

Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

What is perhaps scariest is that the proposed rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Please do not make it easier to export U.S. guns and ammunition globally by moving export licenses of semiautomatic assault weapons and other powerful firearms, given that U.S.-exported firearms are already used in countless crimes, attacks and human rights violations in many nations. This seems to be a rule that would only benefit gun manufacturers, and that is plain wrong.

General Comment

I think this is a terrible idea.

The proposed rule would consider semi-auto assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries. Civilian trade does not need need assault rifles of any sort.

This rule removes Congressional oversight for important gun export deals, reduces transparency and reporting on gun exports (which increases the risk of trafficking along with the removal of of statutory license requirements), shifts the cost of processing licenses from gun manufacturers to taxpayers, gets rid of or decreases many existing gun control efforts, encourages 3D printing of firearms, and transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

It seems practically designed to make gun trafficking more likely, harder to control, and more of a problem than it already is without expanding the resources for any agency to combat all these clear downsides.

General Comment

Treating semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries is unconscionable.

Do NOT:

- eliminate Congressional oversight for important gun export deals;
- transfer the cost of processing licenses from gun manufacturers to taxpayers;
- remove statutory license requirements for brokers, increasing risk of trafficking;
- reduce or eliminate end-use controls, such as State Depts Blue Lantern program, nor eliminate the registration of firearms exporters -- a requirement since the 1940s;
- enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms

As you know, the U.S. Commerce Department does not have the resources to enforce export controls, even now, so do NOT reduce transparency and reporting on gun exports. DO NOT transfer gun export licensing from an agency with mission to promote stability, conflict reduction and human rights, to an agency with mission to promote trade, for God's sake!

We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms.

Enough with the plethora of guns in this country...and now the NRA wants to take it worldwide. Just check the facts, we have more deaths due to gun violence than any other country. Studies have shown that the only reason for the huge number of deaths due to gun violence in the U.S. as compared with other countries, is simply the number of guns, period. Do the right thing and stop being influenced by the NRA's money!

I support the proposed rule promulgated under BIS-2017-0004. Sporting arms, ammunition, and parts are not "weapons of war" and should not be controlled under ITAR. Moreover, removing these items from the control of the State Department will remove the requirement that some gunsmiths get licensed under ITAR at an extraordinary cost for doing minor gunsmith modifications such as merely threading a barrel.

Comments Re: Proposal for the United States to move oversight of export licenses for semi-automatic assault weapons, sniper rifles, and other powerful firearms from the State Department to the Commerce Department

I am a female senior citizen who, over a span of 76 years, has seen the sale and use of fire arms, especially assault-style weapons designed for military use, proliferate and the loss of life due to gun violence increase to a sickening and almost unimaginable level.

I vehemently oppose the proposal to move oversight of such weapons semi-automatic assault weapons, sniper rifles, and other powerful firearms not meant for use in hunting or other gun-related recreational sport, nor ever meant for self-defense from the State Department to the Commerce Department. Such weapons of war rightfully and logically belong under the purview of a military-oriented department. Further, removal of such weapons from the domain of the State Department is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms. If this proposal is allowed to be enacted, Congress will no longer be automatically informed about sizable sales of these weapons, weakening controls on who ends up with such weapons even lifting restrictions on 3D printing of guns and inevitably leading to people making their own how powered weapons.

This proposal is really a sop to the gun industry and the NRA, aiding them in opening international markets and exporting U.S. guns and ammunition globally without regulation, and will likely lead to more U.S. guns ending up in the hands of criminal organizations, human rights abusers, and terrorist groups. It is a cynical move that wholly ignores the needs and rights of American citizens to live free of the fear of gun violence. It will take the country backward in the fight to reduce gun violence rather than move us forward in our efforts to promote and secure the safety of our citizens.

Further, the new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. The gun exporters that benefit from these sales should bear this cost. National laws for brokers and financiers who arrange firearm shipments are a weak link in curtailing trafficking of small arms and light weapons. Firearms brokers would no longer be subject to US brokering laws which would make it easier for unscrupulous dealers to escape attention. The rule reduces end-use controls and public reporting on gun exports and human rights violations.

The transfer of licensing to Commerce will remove new exporters and brokers from the State Department database, weakening enforcement against arms trafficking. The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. The Commerce Department does not have resources, data, expertise or institutional relations to enforce export controls.

The proposed change will also reduce transparency and reporting on gun exports. It would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries. This rule would transfer gun export licensing to an agency the Commerce Department - whose principle mission is to promote trade.

Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights. Military assault style firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The export of these weapons should NOT be subject to weaker controls.

It is high time we stop kowtowing to the NRA and the gun lobby and start protecting our citizens rights to live free of fear of gun violence. I urge you in the strongest possible way to reject this proposal.

I am seriously concerned that any transfer of authority from the Department of State to the Commerce Department regarding the sale and shipping of any kind of firearms will bring a world of trouble to our country and to the rest of the world as well. The State Department has the resources and oversight to keep lethal weapons out of the hands of terrorists where the Commerce Department is all about supporting U S business without a keen focus on where the guns will go and what will they be used for. Our world is already awash in guns of all types and we don't need less oversight - we need much more. I would demand that the State Dept. should be given further powers to monitor overseas firearm sales. Commerce should be concerned with non lethal products and commodities and supporting our businesses who trade in products other than firearms.

NO to the transfer of authority from State to Commerce regarding fire arms sales.

I strongly oppose transfer of regulation of firearms sales abroad from the State Dept. (diplomacy) to the Dept. of Commerce (business). Selling arms to foreign countries or groups is a potential threat to USA safety. We do not need to have the Dept. of Commerce encouraging sales of firearms to foreign hostile governments or groups.

In these times, we must love God above all else and love our neighbors as ourselves. Love is the answer. Not greed, not hate, not fear.

Regulatory Policy Division
Bureau of Industry and Security
U.S. Department of Commerce
Room 2099B
14th Street and Pennsylvania Avenue NW
Washington, DC 20230

Subject: Do not switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department -- Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML) (Docket ID: BIS-2017-0004-0001)

To: Secretary of Commerce Wilbur Ross, Under Secretary of Commerce for Industry and Security Eric L. Hirschhorn, and Assistant Secretary for Export Administration Richard E. Ashooh,

I strongly oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

As you are aware, firearms exports are currently classified as "military and are under the jurisdiction of the State Department. Congress can also block sales of large batches of firearms to foreign countries. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines, Saudi Arabia, and Turkey.

The Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have sufficient staff, let alone staff in every nation around the world. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The rule change would also make the world a far more dangerous place because:

- 1) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- 2) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- 3) It would remove the State Departments block on the 3-D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3-D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3-D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3-D printing of firearms in the U.S. and around the globe.

I strongly urge you to reject this proposed rule change.

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,
Christopher Lish
San Rafael, CA

I am opposed to this proposed rule change. Instead, the Administration should consider other alternatives to better balance the important interests at stake.

Specifically:

I am opposed to the elimination of the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

I am opposed to the removal of licensing requirements for brokers because it will increase the risk of trafficking.

I am opposed to the removal of the State Departments block on the 3D printing of firearms. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

I live in Oregon and not only care about the safety of people near gun bearers in this state but in the other states and Commonwealths of America, and it's allies around the world. I'm very concerned with human rights and how unstable governments have been successful in procuring weapons from sources, possibly the US, and determined at some point in time to use them to harm dissenting civilians, unliked minority groups or portions of their country's population, or even destitute refugees from neighboring unstable countries. Congress, because it is the only power the people have besides a basic vote, should be able to review the movement or sale of weapons to countries outside the US. Congress should have the power of oversight on these arms because they are able to represent us and our requests to our elected officials and some shipments may need to be rejected for society's sake.

The proposed rule treats semi-automatic assault rifles as non-military" which is a terrible decree given the years and decades of work people have given to make this society safer and more supportive of human survival and fulfillment. This proposed rule would allow guns to go places completely circumventing our desire for moral standards of living and safety we have wanted for our own society and in addition, for other societies as well. These are military weapons and should be labeled as such because we should be a country that cares other countries don't have the opportunity to harm themselves as they learn to build societies supportive of human life and fulfillment necessary for each human's health, we should care they don't get the atom bomb, the weapons that wreak chaos, and the approval of us to do it.

to whom it may concern,

The United States needs to check for pre-licensing and Post Shipment Inspections need to be conducted, No firearms should be exported without being documented. In turn, keeping down the gun trafficking.

To add flame to the fire is the 3D print clause, this clause SHOULD BE eliminated, how would we control gun sales if it is not?

Strike the 3D clause.

Please, stay informed of Weapons leaving the United States, who knows who's hands they will wind up in. There are too many serious concerns about Human Rights and wildlife safety to consider, do not be hasty in your decision.
Thank You.

I strongly oppose moving this export license oversight for firearms from the Department of State to the Department of Commerce. How could this proposed rule intend to classify semiautomatic assault rifles as non-military? The reduction of transparency and reporting on gun exports is haunting, knowing how much of our manufactured weapons have been sold to international armies and police forces known for their human right violations.

This proposed rule intends to prioritize the commercial expansion of the gun manufacturing market over the lives it has the potential to massacre. These weapons need to be accounted for and eliminating transparency would be an antithesis to public safety within and outside of the United States.

As a citizen of this country, I strongly oppose diversifying the commercial portfolio of what US gun manufacturers and gun shop owners can solicit because it threatens other countries with the flooding of semiautomatic assault rifles and other weapons that would be declassified.

Thank you for considering my voice.

General Comment

It is immoral to sell US made guns abroad. Those guns will be purchased by criminal gangs and used against law enforcement and US soldiers. The only reason Trump is promoting this idea is to gain support from NRA so they will donate to future campaigns.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake. I would like our legacy, as the United States of America, to be that we made the world a safer place to live rather than create an increase in the level of violence in which the world is already dealing.

General Comment

I oppose changing the oversight of exportation of guns such as the AR-15 and other weapons from State Department to Commerce.

A major reasons for the massive rate of emigration from many countries to the US and Europe is warfare due to civil war or war with the drug cartels. Had America & Russia not exported so many guns many of these people might be living in more peaceful countries. Unfortunately we have already sent enough guns. Giving the Commerce Department free reign to increase guns sales does not make the world a safe place. Gun manufacturers and exporters are responsible for the dangerous world we live in.

I would be in favor of greater restriction on the export of guns. Also greater taxation of gun manufacturing is logical to pay for the damage they have created.

General Comment

I oppose the rules change that would move the handling of export licenses of powerful firearms from the U.S. State Department to the U.S. Commerce Department. The Commerce Department does not have the experience and resources to adequately enforce export control. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

I am writing to express my vehement opposition to moving export license oversight for firearms from the U.S. Department of State to the U.S. Department of Commerce because the proposed rule change treats semiautomatic assault rifles as non-military. This is clearly inconsistent with the undeniable reality that our troops routinely use their military rifles in semiautomatic mode, these weapons are used by state and non-state groups in armed conflicts, and the civilian possession of such weapons is prohibited in many countries.

Our government should not be making it easier to trade/export weapons that are likely to be used in other countries by organized crime, terrorism, human rights violations, and political violence. It is inappropriate and shameful that the proposal would, in effect, use the Commerce Department to promote trade in such weapons to kill human beings abroad. Abroad, our country already has the reputation as being overrun with guns; so our solution is to make it easier to export these weapons? The current gun export licensing oversight under the State Department is appropriate as that agency's mission is promoting stability, conflict reduction, and human rights.

In addition to reducing transparency and reporting on gun exports, the proposed rule also would: eliminate Congressional oversight for important gun export deals; transfer the cost of processing licenses from gun manufacturers to taxpayers; and, enable unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

Shameful.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

1 It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

2 It would remove licensing requirements for brokers, increasing the risk of trafficking.

3 It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully

charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Please take all this into consideration before you would take the extremely dangerous step.

Thank you.

Enid Cardinal

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Semiautomatic assault weapons and other powerful firearms are clearly military and as such must continue to be under the regulation of the State Department and to allow Congress the ability to block sales of large batches of firearms to foreign countries in the name of national security, and to countries where there are serious human rights concerns. The Commerce Department just does not have the resources to adequately enforce export controls; firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. The rule change would remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe, which is a terrible idea. This rule change would make both the US and the world a far more dangerous place.

Thank you.

General Comment

I am writing to oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. Firearms are weapons of war and tight restrictions should be maintained on which foreign entities can have access to these.

The current rules automatically informing Congress about sizable weapons sales is critical to keep military-grade hardware from falling into the hands of regimes which pose serious human rights concerns towards their people, or those which would pass these weapons along to terrorist organizations.

The Commerce Department does not have the resources to adequately enforce export controls as its Bureau of Industry and Security does not have staff everywhere. This means we will be relying on the same industry self-regulation which has produced the disastrous US domestic firearms policy. In short, profit will be placed over national security.

The only reason the gun industry wants to eliminate the Blue Lantern program and have Commerce oversee exports is because it will enable them to further flout the rules in place. We cannot allow them to do this.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department vigorously oppose the rule changes that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Such trade must be factored into international interactions and diplomacy. It is not simply a matter of commerce. Further, the proposals to cease licensing would make arms too easily trafficked, especially without at least as much inspection as has been conducted with State Department oversight. And there should never be 3D reproduction of guns of any size of fire-power.

General Comment

I am deeply concerned by the proposed shift from the State Department to the Department of Commerce in the handling of export licenses for semi-automatic assault weapons. This appears to be a blatant effort to promote the sale of these instruments of death abroad, thereby compensating gun manufacturers for the loss of sales at home. This naked advancement of the interests of the gun lobby will only result in more guns in the hands of more people some of whom will certainly use these weapons against our troops and civilians. Haven't we bowed down deeply enough to the gun lobby already? How many more people at home and abroad have to die in order to enrich a few gun manufacturers? Please keep the granting of export licenses for semi-automatic weapons in the hands of the State Department whose primary job is to protect all of us, not just a few gun manufacturers.

General Comment

I am a 60 year old American citizen who is sickened by the unnecessary violence perpetuated by the availability of weapons.

I am opposed to the proposed rule change for the following reasons:

The proposed rule change treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

The proposed rules are bad policy and encourage bad conduct.

To whom it may concern:

This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security. Switching the regulation of firearms exports to Commerce would facilitate firearms exports to oppressive regimes, remove safeguards that help keep organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and exacerbates the worldwide refugee crisis.

General Comment

The proposed gun rule change would benefit the NRA while making the world a far more dangerous place for the rest of us.

By eliminating the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them; removing licensing requirements for brokers, increasing the risk of trafficking; and removing the State Departments block on the 3D printing of firearms.

Please protect us. Protect the rest of the world, too. Thank you. I vote!

General Comment

We should not be exporting more guns especially guns of the same type that our military uses and the licensing should not be transferred to an agency the Commerce Department that already cannot fulfill its responsibilities. Licensing needs to stay with the State Department which is more focused on the harm that these weapons do to our citizens abroad and citizens of other countries.

A 2nd reason I am strongly opposed to these proposed changes is that congressional oversight would effectively be eliminated. This is extremely important because without such oversight nobody would have been aware of the scope of recent human rights violations in the Philippines or in Turkey.

We as a country need to continue to stand up for the dignity of each person - a dignity that is far more important than a few people or companies making money off of an increase in violence and killing.

General Comment

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This would change the focus on protecting our nation and promoting firearm safety to promoting the sale of guns throughout the world. We have such an epidemic of gun violence due to the easy access of powerful weapons, this is not a problem we should be exporting to the rest of the world. Making this change has serious negative ramifications for our nation's safety, with little chance of ever repairing the harm. We cannot allow profit to be the prime driver when it comes to weaponry.

General Comment

I am a registered Republican from Kansas and I always vote. I stand with the students from Parkland and want to limit gun violence with common sense laws and regulations. Let's not follow the bad practices of Ollie North (the criminal) head of NRA.

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military.

The proposed rule would eliminate Congressional oversight for important gun export deals.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons.

The rule reduces end-use controls for gun exports.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce.

The proposed change will reduce transparency and reporting on gun exports.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

My name is Hollye Dexter. I am on the board of directors for Women Against Gun Violence and have experienced the scourge of gun violence in my own family. I vehemently oppose the transfer of oversight of firearms export from the state to commerce department. Guns kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. This will only send more asylum seekers fleeing to our borders. And then what? We lock them up and take their children? This is a terrible and dangerous proposal only created to put money in the gun lobby's pockets.

Moving handling of export licenses of semiautomatic assault weapons and other firearms from the U.S. State Department to the U.S. Commerce Department. Gun violence is a problem around the world, and certainly within the United States. There is no way to guarantee how semiautomatic weapons would be used in other countries. Turning export licenses over to an agency that promotes U.S. products, rather than considering the use of the product would be a detriment to U.S. and world citizens.

I am opposed to the transfer of oversight of firearms exports from the State Department to the Commerce Department. Firearms are weapons of war. The State Department is tasked with relations with other countries and the reduction of violent conflict in the world. The State Department is in a position to know the political ramifications of shipping weapons of war to any particular country, and therefore should be in charge regulating the sale of such weapons of war. The sale of such weapons should remain under control of the USML.

General Comment

I'm an expert on civilian harm and the arms trade, and I write to urge you to reject this dangerous proposal because:

1. The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, and US troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate arms exports.
2. The proposed rule would eliminate Congressional oversight for gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons, which will limit its ability to comment on related human rights concerns. Items moved to Commerce control would no longer be subject to the statutory required congressional notification for sales of firearms regulated by the US Munitions List valued at \$1 million or more. In a September 15, 2017, letter, Senators Benjamin Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate Congressional intent and effectively eliminate Congress proper role.
3. The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing, leaving the government i.e. taxpayers to absorb the cost of reviewing applications and processing licenses.
4. National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts

to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law. Although Commerce states it will retain rules on brokering for a State Department list that includes assault rifles, there is no statutory basis for brokers of these weapons to register and obtain a license, increasing the risk of trafficking. That will make it easier for unscrupulous dealers to escape attention.

5. The rule reduces end-use controls for gun exports. It would eliminate the States Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. End-use controls also are weakened by eliminating registration of firearms exporters. Registration of exporters allows State to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. Transferring licensing to Commerce will remove new exporters and brokers of these firearms from State's database, weakening enforcement.

6. The rule enables unchecked gun production in the US and exports abroad by removing the block on 3D printing of firearms. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the US and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

7. The Commerce Department does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce. The BISs enforcement office, with no staff in other parts of the world, is not equipped to take the same level of preventive measures for end-use controls. Moreover, State has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance the Commerce does not.

8. The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

9. This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by State, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

The export of these weapons should be subject to more controls, not less.

General Comment

I oppose the the Trump administration proposal to move the make it easier to export U.S. guns and ammunition globally. By transferring the authority from the State Department to the Commerce Department, the number of exports applicant will increase by 10,000 annually. This includes assault weapons and other powerful firearms! This change in policy is problematic because it:

Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.

Eliminates Congressional oversight for important gun export deals.

Transfers the cost of processing licenses from gun manufacturers to taxpayers.

Removes statutory license requirements for brokers, increasing risk of trafficking.

Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.

Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.

The Commerce Department does not have the resources to enforce export controls, even now.

Reduces transparency and reporting on gun exports.

Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

General Comment

The supervision of Firearms and Related Articles should NOT be transferred to The Dept. of Commerce. The rules in place under The State Dept. should be maintained so that FEWER, not more, assault-type weapons and armor-piercing bullets are exported to other countries. These war weapons and cop-killer bullets are too dangerous to be in ANYONE'S hands who is not military or in law enforcement, IMHO as a Vietnam Veteran and life-long hunter and gun owner.

General Comment

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so that public may understand the impact of these rules and potential firearm exports. Also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

I oppose the proposed rule, as it loosens the regulation of gun exports and increases the risk that military-style weapons land in the hands of international criminals. The proposed rule dramatically changes the regulatory structure for firearm exports and appears largely driven by the interests of the firearms industry. Notably, the proposed rule decreases transparency to Congress and the public. I urge you to reject the proposed rule as currently drafted.

I oppose this, or any other, rule change that would move the regulations of firearms export from the State Department to any other agency. That change would encourage firearms sales to entities that we all agree should not have them, such as oppressive political regimes, criminals and terrorists in other countries. The resulting increase in violence would not only destabilize those countries, but encourage mass migration to the United States, both undesirable outcomes.

I come from many generations of responsible rural gun owners. There are times and places where gun ownership and use are critical; however, I find the proposal to ease restrictions on the exportation of guns and ammunition from the United States to be abhorrent. We struggle enough with gun violence in our own country, that the gun industry and the NRA are pushing to embed that struggle in other communities just to increase sales and profits is poisonous and amounts to nothing more than greed run amuck. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to MORE controls, not fewer.

I strongly oppose this change to switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. If the entire premise is that firearms should be used a means of protection they should be regulated as such, not as a means for profit. Supporting the right the bear arms is separate from promoting the distribution of such to foreign lands. The Commerce Department is not currently setup to appropriately monitor, and control the sale and distribution of munitions. Please do not move forward with this rule change. Thank you.

U.S. gun manufacturers -- and their lobbying machine, the NRA -- are pushing for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Dept. to the U.S. Commerce Dept.

The mission of the U.S. State Dept. is to safeguard our country. The mission of the U.S. Commerce Dept. is to promote U.S. businesses.

The handling of export licenses (for powerful firearms) by the U.S. Commerce Dept. would promote more gun violence and unnecessary wars abroad, and it would compromise U.S. national security.

Please keep the U.S. State Dept. in charge of handling of export licenses for powerful firearms.

Thank you for your consideration on this matter.

Please do not go ahead with the proposal to export license oversight for firearms from the Department of State to the Department of Commerce. I object to this rule change because it depends on defining semiautomatic assault rifles as non-military" even though U.S. troops routinely use their military rifles in semiautomatic mode and civilians are not allowed to possess such weapons many countries. I also find this proposal problematic because it reduces transparency and reporting on gun exports and transfers gun export licensing from an agency with a mission to promote stability, conflict reduction, and human rights, to an agency with a mission to promote trade and which lacks the resources to adequately enforce export controls.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The world doesn't need more firearms. We need to spend our energy, time and money and resources on children, education, healthcare, alternative energy, among many other things. Shipping more guns to other countries will only make our own country less safe.

Also, my dear friend was killed by a gun accidentally almost 20 years ago. He was meticulous about how he handled guns, and was very safe with them. Unfortunately, accidents still happen, and I will never see him again. I don't wish the experience of losing a loved one to a gun on anyone.

General Comment

I strongly OPPOSE the proposed rule.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

General Comment

I am deeply troubled by this proposed rule governing article which may be used t kill human beings, primarily because it

- 1) Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- 2) Eliminates Congressional oversight for important gun export deals.
- 3) Removes statutory license requirements for brokers, increasing risk of trafficking.
- 4) Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- 5) The Commerce Department does not have the resources to enforce export controls, even now.
- 6) Reduces transparency and reporting on gun exports.
- 7) Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

One is merely offensive - the cost of licenses should be borne by end users and not transferred to the rest of us.

General Comment

I do not want rules loosened on gun exports which will increase the risk of dangerous weapons being bought or stolen by international criminals. The proposed rule changes do not adequately address our national security, foreign policy, and the need for transparency so Congress and the public can understand the impact of these rules on firearm exports.

The administration should consider other alternatives given the dangerous elements considered in these rules.

The rules changes would remove the licensing requirements for brokers, increasing the high risk of trafficking, and it would remove the State dept. blocking on the 3D printing of firearms. Removing this block enables 3D printing of firearms in the US and around the world.

American citizens want stronger regulations on firearms in the US and in trade. Americans do not want more terrorism in the world. Do not weaken the regulations, strengthen them.

General Comment

My name is Hazel Ryon. I oppose the transfer of oversight of firearms export from the state to commerce department. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

Please let us know if you did this and how long it took. It should take one minute or less.

Thank you!

General Comment

There is no question that there is a legitimate need to keep the State Department involved in decisions about the export of firearms. To what countries? In what quantities? The Department of Commerce, of course, might care about those questions, but generally they would be pleased to see a growth in US exports, and they would be far less likely to consider any vital questions to our national security interest.

I am told that there are traffickers in firearms whose business is to move weapons and ammunition from one place to another. They care about profit, not any country's security. I cannot imagine my government giving carte blanche to such movement of weapons and ammunition.

The Commerce Department has little staff and no training in this area. On the other hand, the staff at the State Department are trained to ask the right questions about what a particular export means for US foreign policy and for US relations with other countries.

General Comment

It defies logic, precedent and proven security safeguards. There is no reason to take away the power of the Department of State to regulate and control the sale and distribution of firearms from the US to other countries. The only interests the transfer of this regulatory obligation to the Department of Commerce would serve is that of gun manufacturers and distributors. This is a brazen power grab that does not serve the American people, their interests or their safety. The idea that any recommendation from this president* and his corrupt, self dealing cabinet should be considered, let alone adopted, defies logic and makes us more vulnerable than ever by sacrificing public safety for the enrichment of well connected companies and individuals who make their fortunes by pedaling violence and mayhem to already vulnerable and unstable parts of the world. This endangers us all. Do not allow this stupid, corrupt abuse of power to undermine our currently working regulatory framework.

General Comment

I'm a Franciscan Sister volunteering for the past 30 years at my center city parish in Columbus OH. Our neighborhood is no stranger to drive-by shootings and robbery and other crime involving guns. Death and maiming from guns and assault rifles must be contained, and, ideally, stopped here and abroad.

I am opposed to the proposal to make it easier for our country to export firearms and assault weapons to other countries.

My understanding is that under what's proposed Congress would no longer have to review critical export deals, and that certain licensing costs will be borne by taxpayers. This is unthinkable! There is a raft of other measures that would loosen controls that are so needed on lethal weapons. If approved, the measures would result in more deaths in the world community. I believe that the oversight of gun export belongs to the State Department that is concerned with security and our Congress rather than the Commerce Department whose mission is mainly promoting trade.

Respectfully,

Sister Alberta Wilkes, OSF
St. Leo Convent

Public comment 947. Individual. Suzanne Nordmann. 7-9-18

Submitter Information

Name: Suzanne Nordmann

General Comment

My name is Suzanne and I'm a voter in San Diego, CA. As a victim of gun violence, I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage.

The proposed rule would eliminate Congressional oversight for important gun export deals. Congress will no longer be automatically informed about sizable sales of these weapons.

The new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and Commerce does not charge any fee for licensing. So the government i.e., taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

National laws for brokers and financiers who arrange firearm shipments are a weak link in the chain of efforts to curtail trafficking of small arms and light weapons. There is good reason for concern that firearms brokers will no longer be subject to US brokering law.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators.

The proposed change will reduce transparency and reporting on gun exports. The rule would eliminate Congressional and public awareness of the total amount (dollar value and items) of firearms sales authorizations and deliveries around the world, since the Commerce Department annual reports currently only cover about 20 countries.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is

to promote trade.

Public comment 948. Individual. Margaret Hardy. 7-9-18

Submitter Information

Name: Margaret Hardy

General Comment

I am an active member of San Diego 4 Gun Violence Prevention and it has come to my attention that the Trump Administration is proposing to transfer licensing and oversight of firearms exports from the State Department to the Department of Commerce. It is my opinion that if this occurs, more firearms will get in the hands of criminal organizations, human rights abusers, and terrorist groups and is being pushed to open up international markets to compensate for lagging domestic gun sales. I am vehemently opposed to this proposed change for these reasons:

- Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- Eliminates Congressional oversight for important gun export deals.
- Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- Removes statutory license requirements for brokers, increasing risk of trafficking.
- Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- The Commerce Department does not have the resources to enforce export controls, even now.
- Reduces transparency and reporting on gun exports.
- Transfers gun export licensing from agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.
- Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less.

Please consider not implementing this proposal.

Background checks are necessary. The NRA fights them because people can't just go to a show and buy a gun without a check. It's high time the NRA's charter were challenged. I remember a time when they stood for gun safety, but now it's absolute nuttiness! Then there's the first half of the Second Amendment about the well regulated militia that everybody seems to have forgotten or ignore. Then there are those who want assault weapons, which are no good for defense, which strangely enough the reason for the Second Amendment was to defend the nation against enemies both foreign and domestic. One takes an assault weapon to _____, not to _____. If you did not guess assault and defend, then you should not have access to anything more dangerous than a soup spoon.

General Comment

BIS has noted in its proposed rule announcement that [t]he EAR does not include a concept of defense services, and the technology related controls are more narrowly focused and apply in limited contexts as compared to the ITAR. Consider that if ECCN 0E501 will control technology for the development, production, operation, installation, maintenance, repair, or overhaul of firearms controlled by new ECCN 0A501, then certain firearms training, which would have previously been an ITAR-controlled defense service, may now be NLR to many destinations.

BIS has also noted, If a gun manufacturer posts a firearms operation and maintenance manual on the Internet, making it publicly available to anyone interested in accessing it and without restrictions on further dissemination (i.e., unlimited distribution), the operation and maintenance information included in that published operation and maintenance manual would no longer be subject to the EAR. Following this logic, consider the fact that if a gun manufacturer posts on the internet for unlimited distribution 0E501 technology for the production of a 0A501 firearm (e.g., 3D printer specs), then it is not an unauthorized technology transfer but rather publicly available information no longer subject to the EAR.

I strongly oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This rule change would have devastating affects on our national security. If this rule change goes into effect we will soon find American guns being regularly used against American soldiers and in terrorist attacks abroad. There are many valid and good reasons the State Department has had control over firearm export regulation. Only they are in the unique position to understand who should and shouldn't be granted these licenses to ensure the safety of our military and the public. Please put our national security and lives above profits of the gun industry by opposing this rule change.

General Comment

As the owner of a small gunsmithing operation in rural SC I urge the Commerce Department to assume control of small firearms and ammunition from the State Department. It is imperative to my business that we fix the horrible framework that is in place now. Effective 22 July 2016, gunsmiths suddenly found themselves subject to the regulatory authority of the Arms Export Control Act (AECA) as administered by the State Departments Directorate of Defense Trade Controls (DDTC). Regulators suddenly determined that traditionally routine gun repair and enhancement services now constitute firearms "manufacturing" and mandatory registration of my small, home-based business under International Traffic in Arms Regulations (ITAR). Tis ITAR directive advises gunsmiths to stop what they are doing and pay up or face fines and prison! (Violations under the ITAR can bring civil penalties of \$500,000 per violation and criminal penalties of up to \$1 million per violation along with up to 20 years in prison).

These rules are terribly confusing. I submitted some very direct questions to DDTC and have never received a reply. I developed a list of typical customer service requests that raise concern with respect to ITAR registration. Specifically, I requested their determination on these straightforward examples:

- 1) Drilling, threading and installing sling swivels on rifle forend (and buttstock) for sling and/or bipod (requires drill press and screw threading)
- 2) Fabricating replacement parts - such as firing pins for rifles and pistols (requires lathe turning, milling, grinding, and polishing)

- 3) Installation of Cominoli safety special option on Glock pistols (requires cutting of frame slot with Foredom tool and fixture)
- 4) Rifle barrel setback - to correct headspace and service misfire issues (requires lathe and chambering reamer)
- 5) Slide and frame milling and cuts adding cocking serrations for improved handling, chamfering and dehorning for concealed carry, and enhanced eye appeal (requires mill, surface grinder)
- 6) Installation of gunsmith fit barrel - for accuracy upgrade or to address headspace issues (requires milling and/or TIG welding of hood and foot to precise fit)
- 7) Installation of scope mount on early rifles - for hunting, competitive shooting, and sporterizing (requires drilling and tapping of mounting holes)
- 8) Re-crowning barrel - to improve or repair rifle accuracy (using lathe)
- 9) Installing 1911 Beavertail - to improve comfort and aim (requires precision cutting of frame, typically with mill)
- 10) Installing Sako-style extractor on Remington Model 700 rifle - primarily for improved reliability (requires milling and drilling of rifle bolt)

The above are, I think, a typical sampling of services that might reasonably be encountered in any gunsmith practice. I think that common sense will inform that this sort of everyday incidental activity for repair of firearms cannot constitute exportable manufacturing. Under State Department export control rulings all the above would likely constitute manufacturing and are illegal under ITAR absent payment of a large export fee. I urge you to assume administration at the Department of Commerce.

Obviously, the ITAR fee is a significant burden on a small gunsmith shop and will be an important factor in determining the viability and directions of my life endeavor. I am hopeful that the Commerce Department will take over administration and governance of small arms and ammunition manufacturing and repair.

General Comment

I am a former Deputy District Attorney and a lawyer for more than 30 years who has spent much of her career representing survivors and victims of gun violence and local governments seeking to address gun violence in their jurisdictions through enactment of commonsense firearms laws. I am opposed to the proposed rule changes for all the reasons set forth in my comment submitted to the State Department. In summary, these proposed rule changes are contrary to the Congressional intent in enacting the statutes that govern arms exports, would reduce end-use controls for gun exports, increase the risk of small arms being trafficked by international human rights violators by eliminating registration of firearms exporters. By moving oversight to Commerce the proposed rule changes would effectively end State's successful and necessary Blue Lantern program, eliminate use of the State Department's database for tracking data related to illegal firearms trafficking abroad, and eliminate Congressional oversight for important firearms export deals. The end result of the proposed changes would be to further fuel armed conflict abroad by treating assault weapons as non-military weapons and moving to Commerce's control, a department whose primary mission is to increase trade, the very weapons research shows are the weapons of choice for gun traffickers, drug traffickers, and criminal organizations abroad.

General Comment

I am wary of the provisions of this change removing the need for a particular purchase order, and allowing entities to get blanket permits; these are weapons, and whether military or nonmilitary, are dangerous and need to be closely watched. I am wary of giving government officials exemptions from the same regulations that the rest of us follow; yes, they are almost certain to not be security risks, but they are all subject to the rule of law; they are not in some sense better than the rest of us. Having a government job should mean that one is subject to more scrutiny and regulation than others, not less; government workers are held to higher standards. Overall, seeing weapons as just another commercial product, which seems to be the direction that these changes take, though some regulation still remains, is a bad choice for a world striving for nonviolence. I oppose these changes.

General Comment

To add to my previous comment, another concern is that there will be no notification of large-scale arms sales, even to countries where turmoil is rife, where repressive regimes reign, or where lawlessness is great. Congress needs to stay on top of such transactions, even if the individual weapon is not traditionally a military-grade weapon. I think that there is value to having firearms under control of the Department of State. They are not simply another manufactured product; they are designed to maim and kill. They need special regulations, as currently enacted. It is not simply a question of military advantage, but of ensuring that the movement of deadly items is carefully monitored.

General Comment

Transferring the regulation of exporting firearms to the Commerce Depart makes the sale of firearms about money rather than safety. History has shown time and again that US exported firearms will be used against US citizens here and abroad.

Here are some of the many reasons rational people are opposed to this change:

- *Transfers the cost of processing licenses from gun manufacturers to taxpayers.
- *Reduces or eliminates end-use controls, such as State Depts Blue Lantern program, and by eliminating registration of firearms exporters, a requirement since the 1940s.
- *Treats semi-automatic assault rifles as non-military, despite their use by U.S. troops, their use by state and non-state groups in armed conflicts, and their prohibition for civilian possession in many countries.
- *Eliminates Congressional oversight for important gun export deals.
- *Removes statutory license requirements for brokers, increasing risk of trafficking.
- *Enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms.
- *The Commerce Department does not have the resources to enforce export controls.
- *Reduces transparency and reporting on gun exports.
- *Transfers gun export licensing from an agency with mission to promote stability, conflict reduction, and human rights, to an agency with mission to promote trade.

The State Department is the appropriate agency to regulate the exporting of firearms. The Commerce Depart is not.

General Comment

I am against the proposed rule change to make it easier for U.S. gun manufacturers and dealers to export guns and ammunition globally. This rule would basically be helping to arm those who want to do Americans harm; exported guns and ammunition will almost certainly fall into the hands of terrorist groups, criminal organizations, human rights abusers, and other dangerous groups. Given world events, how can we even consider shipping more arms abroad? The profit gains for American gun and ammunition manufacturers is simply not worth the risk.

Comments from an individual who works with USMLCategory I exporting every day:

Product migration will create a small cost-savings for my company in registration and licensing fees, but more significantly I do not see a demonstrated equivalent in terms of paperwork reduction or real time savings. Financial savings for smaller manufacturers will be proportionately larger and could increase the pool of available vendors with whom we work, which is a positive. I understand it has been problematic for small companies caught in the registration net due to their manufacturing activities, but whose size/finances cannot absorb the registration fee. This issue is better resolved by changing the definition of manufacturer to add a minimum size requirement..

The licensing process will still involve inter-agency review including staffing out to State Dept. Agencies and DOD. Other than utilizing a different application form and the change in the agency receiving applications, it has not been demonstrated exactly what, if any, process improvement this represents. Caveat: the devil you know is better than the one you don't.

Improvements and savings are quantified using the 43.8 minutes for BIS application vs. the 60 minutes for DDTC application. This metric provides no meaningful data from which to extrapolate total process savings or if any is really generated. It also in no way accounts for the additional significant burden which has been added to the exporting process by increasing the quantity and type of data capture elements which will be required for AES filing, including the need to record individual serial numbers for each firearm. Adding time-consuming elements later in the exporting chain significantly increases the time it takes to complete an export. These new control/requirements are more cumbersome than the current process under the ITAR. They will also increase the burden on an already overloaded CBP.

Recordkeeping changes discuss maintaining warranty certificates for international repair returns. My company does not issue customer specific warranty certificates, and I see this item as an additional record keeping burden which does not relate directly to exporting.

There will be burdens and expenses of transition: reclassification of all product, re-training of all employees, advanced training needed for Compliance personnel. I have not had to utilize SNAP-R previously, nor have I had

to deal extensively with Commerce-controlled exporting other than EAR99 product. There will be a substantial amount of time required to achieve comfort level with a new set of regulations. I understand this burden is considered short term, however the provided rationale for this migration has still not clearly demonstrated a substantial process improvement to warrant the expense and time of this transition.

The EAR does not include a concept of defense services and the technology controls are more narrowly focused and apply in limited contexts as compared to the ITAR. This change represents an improvement in terms of my ability to share information needed for marketing firearms and for repairing them internationally, but the same result could be achieved via amendment to the ITAR, factoring in that there have been few substantive changes to basic firearms technology in the past several decades and that most of this information is already available worldwide.

Maintenance of EAR status of previously classified product: The classification status of items that have been previously determined to be EAR99 product in formal CJ determinations is to remain EAR99 for these items. However, the scope mounts, swivels, accessory rails and iron sights enumerated in y.2 , y.3 and y.4 of 0A501 contradicts this statement and places them under .y control. I would appreciate clarifying language regarding EAR99 status and the removal of these items from .y control.

LVS shipments: the positive effect of the amendment made here by raising the value from the \$100 of 123.17(a) to \$500 is diminished by the change in language from wholesale value to the actual selling price. For relief to be genuine, the \$500 increase should be wholesale value and an additional increase to \$1000 for shipments to Canada, should also be considered. I do appreciate that receivers and breech mechanisms would be eligible for LVS if the destination is Canada.

I concur with the need for an appropriate 180 day delayed effective date for final rule. This amendment represents a major change in business operations and I will need time to completely identify all business operations requiring attention, create an implementation plan and draft appropriate changes in SOPs with accompanying training.

Finally, the rationale for this transition is based upon products being civilian use vs. military. Given that the debate regarding semi-automatic firearms has not been resolved in this country, we could incur transition expenses only to have the entire process reversed.

I object to the proposed rule change. If the new rule took effect, then many types of firearms exports currently under the control of the U.S. Department of State (DOS) would instead be controlled the Commerce Department, which does not have the resources of the DOS. The Commerce Department could not easily prevent exported firearms from falling into the hands of oppressive regimes, criminals, or terrorists.

General Comment

I oppose the proposed rule for the following reasons:

The proposed rule treats semi-automatic assault rifles as non-military. But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. Regarding wide retail availability of firearms, about which comment has been requested, many countries prohibit civilian possession of semi-automatic rifles and handguns, as well as of any larger caliber firearm. Six U.S. states, the District of Columbia, and several large retail chains also prohibit the retail sale of semi-automatic assault rifles. Many semi-automatic rifles are also easily converted to fully automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The rule reduces end-use controls for gun exports. It would eliminate the State Departments Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Governments information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporters history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

The rule enables unchecked gun production in the U.S. and exports abroad by removing the block on 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printing weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to make the same argument once those weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, this change could generate many preventable tragedies.

This rule would transfer gun export licensing to an agency the Commerce Department whose principle mission is to promote trade. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries.[5] The export of these weapons should be subject to more controls, not less.

I am opposed to changing the regulation of firearms exports from the State Department to the Commerce Department for several reasons. Firearms should continue to be classified as "military," and Congress should be allowed to block large sales to foreign countries. Otherwise huge caches of firearms could be sold to countries where human rights pose a grave issue, such as Egypt, Philippines, Turkey, and some Central American countries where the spread of weapons is likely to further destabilize the region and lead to more migration. Furthermore, it is my understanding that the Commerce Department does not have the resources to enforce the export controls that are needed to prevent these weapons from getting into the hands of organized crime or terrorists groups in foreign countries.

General Comment

I am writing to oppose the proposed rule that would shift the responsibility of monitoring exports and import of firearms and ammunition from the State Department to the Department of Commerce. The shift would change a lot of current programs and make it far easier for weapons to be exported and divert to areas of conflict throughout the world. The State Department has a mission to reduce arms trafficking and promote peace and has successfully been doing this for years. The Commerce Department is by its name interested in increasing commerce. That is important but not in the area of providing more firearms, including semi-automatic weapons, to countries where they can be easily diverted into areas of conflict.

For instance, taking this monitoring out of the State Department would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. And It would remove licensing requirements for brokers, increasing the risk of trafficking.

It might also have an adverse effect on controlling the 3D printing of firearms. Why would we want to make it easier for gun traffickers and terrorist to get weapons. For the safety of our armed forces and our citizens we should keep the monitoring of exports/imports and of weapons brokers in the Department of State.

General Comment

I am opposed to loosening regulations related to the export of firearms. This is so dangerous, who could be for this, except those who are in the gun manufacturing industry and others who stand to make money from it? Given our national security concerns and in this age of international terrorism, loosening regulations on the export and sale of firearms is just about the worst thing we could do. This measure could potentially increase the chance of dangerous weapons ending up in the hands of international criminals. I do not think this proposal adequately addresses our interests with regards to national security, foreign policy, international crime and terrorist threats. The administration should NOT move forward with this reckless proposal.

General Comment

Arms dealing is not just about commerce. Putting firearms sales under the Department of Commerce threatens the security of the United States. All firearms deals outside of the U.S. should have to go through the Department of State as they do now. For an administration that claims to have the security of the country at heart, giving free rein to arms manufacturers to sell to whomever they want will do just the opposite. Keep control of arms sales in the State Department.

General Comment

Switching the regulation of firearms exports from the State Department to the Commerce Department would allow firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

The State Departments Blue Lantern program would be eliminated, which has been in effect since 1940. The Blue Lantern programs carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. If Commerce were responsible for exporting of firearms, then public would likely not know any information about these firearms -- what firearms are going to which countries, regimes, etc. Licencing requirements would be removed for brokers increasing the risk of trafficking -- again what firearms to which countries/regimes.

Another issue is that 3D printing of firearms would be allowed, enabling 3D printing of firearms in the US and around the world.

If firearms regulations remain with the State Department, then Congress can oversee their sales, block sales of large batches of firearms to foreign countries. Congress would not be automatically informed about weapons sales, could not stop exports for national security concerns or to countries where there are serious human rights concerns.

The world would be a more dangerous place if Commerce were to have oversight of firearm exports.

I strongly urge the Commerce Department to oppose relaxing rules that would make it easier for U.S. firearm manufacturers to export assault rifles and other guns, with less oversight and accountability. We cannot continue to ignore the fact that gun violence kills one thousand people around the world every day, and we should be making it harder, not easier, to export U.S. made weapons of war.

steven.clagett@bis.doc.gov

It's fair to say Brownells, Inc. has utilized the fullest extent of the ITAR in our industry. We processed thousands of export licenses over the years, covering hundreds of manufacturers and thousands of products. We currently have a very broad WDA including categories I and III with a distribution territory covering nearly all of Europe.

Generally we applaud the changes proposed but have a few comments:

1. Our interpretation of the proposed change regarding firearms magazines is that .x includes magazines under 15 rounds. However, there appears to be no current difference in how .d and .x are controlled (regarding regions, LVS, etc.). State Department licensing policy regarding magazine capacity has often fluctuated within the bounds of the published regulation. Would it be more flexible to remove a regulatory category within the same ECCN that is based on a specific magazine capacity?
2. 0A502 is confusing at first glance (especially in considering the parts of shotguns) - why not incorporate a ".a", ".b", ".c", etc. for shotgun attributes like barrel length?
3. How are accessories of optics, like sunshades or other anti-glare devices to be treated? A simple note might save some time in creating CJs specific to this type of product.
4. Regarding 0B501 .e – What is the definition of "production" equipment? We have many hobbyist customers who wouldn't qualify as a gunsmith let alone as a manufacturer and tools

200 South Front Street • Montezuma, IA 50171-1000 USA
Main: 641.623.5401 • Fax: 641.623.3896 • Orders: 800.741.0015
www.brownells.com

and equipment designed for hobbyists are quite different than manufacturing equipment... Yet we have a concern these tools will be included in 0B501.e because even the hobbyist is "producing" a firearms part. If there could be some guidance for "production" equipment that clarifies the scope to manufacturing – perhaps "production" would be defined as repeated production of the same or similar parts in multiple quantities per day – this would help clarify the intent a great deal.

5. Serial number reporting for all firearms will cause an additional burden – especially as this is a duplication of effort for permanent exports FFLs will already recording this in the BATFE required A&D "bound book". Could this reporting be limited to TMP exports? Also, the reporting of Make/model/caliber information in AES will be burdensome considering the scope and variety of our daily shipments.
6. On potential issue is with the record keeping requirement of warranty certificates. An exporter may not have a manufacturer's (or any other) warranty certificate as part of the transaction. Perhaps some clarification is needed here that this is required only for the manufacturer when they export?
7. How is "technology" defined for 0E501/505? For example: shooting chronographs or empty brass cartridge annealing machines "technology"?

Best regards and thank you for your efforts,

Robert McAllister

Re: RIN 0694-AF47

In the matter of the proposed changes to how ITAR is implemented I would like to raise several points of concern.

First let me say that I welcome nearly all the changes as proposed. My professional background is in ammunition manufacturing. I have patented my own invention and am called upon to act in the capacity of an expert witness in legal matters. In addition to the 20+ years experience I have spent 12 years running the local 4-H Shooting Sports Program in my county. During that time youth from my club have competed in many local and national events. Many have medaled in big matches including one national champion in air rifle.

Concern #1.

The dollar value placed on exporting bullets (not loaded ammunition) seems impossible to actually kick in and out of skew with the rest of the proposed levels for other items. In many cases this would limit the buyer to only a single box of bullets. Many boxes of bullets, especially ones that are not made in but one or two countries are quite expensive. For example the following is the cost for a box of just 50 bullets.

.348 250 gr = \$43.50
.33 200 gr = \$41.00
38-55 255 gr = \$41.00
.408 350 gr = \$46.00
.404 350 gr = \$59.00
.425 400 gr = \$66.00
43 Spanish 400 gr = \$46.00
.475 #2 500 gr = \$106.50
50-110 450 gr = \$54.50
50-70 450 gr = \$54.00
.505 500 gr = \$72.00
.577 650 gr = \$83.50

Also many common caliber bullets made as a premium hunting bullet in a special weight are equally expensive per bullet.

30 cal 250 gr = \$45.50

32 Rem 170 gr = \$40.00 w/ minimum of 3 boxes

.358 300 gr = \$63.50 w/ minimum of 3 boxes

.416 400 gr = \$50.50

.458 500 gr = \$111.50

50 cal 500 gr = \$68.00

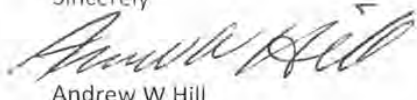

Based upon the other covered items in ITAR it would seem that the \$100.00 is just too low and should be \$300.00 minimum to allow someone with a small purchase of 200 – 300 bullets to reload for an older or odd hunting rifle. This is applicable to brass cartridge cases as well. And both are often purchased together. In all fairness ammunition components should be equal to the \$500.00 level assigned to gun parts.

Concern #2.

International competition in small bore rifle may be hurt with the 1,000 round limits on ammunition. Many matches require 100 or 200 shots for record. Usually the event has several days of competition. The match starts with sighters and if conditions are difficult (wind, lighting, and mirage) the rounds fired as sighters in a match can approach the number needed for record. Usually long distance travelers are given the day ahead to check everything and practice before the actual event. A junior shooter competed in Europe then visited the MEC shooting complex for one on one training before returning to the states. The days training was valuable and worth using double the amount of ammunition used in a two day competition. Certain unusual matches require many more record shots. The metric prone event is two days long and consists of 600 record shots. For these reasons I recommend making an exception for small bore 22 rimfire ammunition and allowing 2,000 rounds when traveling out of the country.

I am not aware of the requirements for shotgun competitions but think they are in a similar situation. Gold medalist Kim Rhode practices with 800 shots a day. Perhaps the exemption can be specified for competitors.

Sincerely

Andrew W Hill

Comment on The Bureau of Industry and Security (BIS) Proposed Rule: Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML)

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I couldnt be more astonished and dismayed that the gun lobby and industries are pushing for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).

Firearms are rightfully categorized as military, and are under the regulation of the State Department. Congress should continue to be automatically informed about sizeable weapons sales and have the authority to stop them when that poses a risk to our national security or threatens to increase human rights violations by facilitating weapons sales to oppressive regimes.

No one anywhere should be allowed to make firearms on a 3- printer. Period!

Arms brokers should always be licensed, to try and prevent unlawful trafficking..

And by no means should the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them, be dismantled.

The existing rules must be maintained and strengthened if switching the regulation of firearms exports from the State Department to the Commerce Department facilitates firearms exports to oppressive regimes, removes safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuels violence that destabilizes countries and causes mass migration.

Do not weaken our fire arm protections by a transfer of authority from the State Department to the Commerce Department. Do not feed into the global oppressors and black market by deregulation.

Thank you for taking this letter, my opinion, seriously.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Congress must not be prevented from being automatically informed about sizable weapons sales. Congress must be able to stop sizable weapons sales in the name of national security, even and especially to countries where there are serious human rights concerns, such as the Philippines and Turkey. Depriving Congress of this ability to monitor these sales is a terrible, dangerous idea. It would open the door to firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

Allowing this country to do such an unconscionable thing is not only unamerican, it would directly contribute to making the world a more dangerous place as well as inviting security breaches here at home.

I oppose the rule change

I oppose the rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department which is focused on safeguarding our nation to the U.S. Commerce Department which is focused on promoting American business. With this rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

Detailed concerns are that the rule change would eliminate the State Department's Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them; would remove licensing requirements for brokers, increasing the risk of trafficking; and would remove the State Department's block on the 3D printing of firearms. Promoting American business at the risk of further destabilizing the world is a bad deal.

RE: Comments on Proposed Rule – Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML) -- RIN 0694-AF47

Dear Mr. Clagett:

The National Shooting Sports Foundation (NSSF) respectfully submits the following comments to the above-referenced Federal Register Notice (83 FR 24166, May 24, 2018). NSSF is the trade association for America's firearm and ammunition industry.¹ Formed in 1961, NSSF membership includes more than 12,000 manufacturers, distributors, firearms retailers, shooting ranges, sportsmen's organizations, and publishers. We seek to promote, protect, and preserve hunting and the shooting sports, and we offer the following public comments.

Summary of High-Level Comments

The policy justifications for the proposed rule and the corresponding proposed rule by the State Department are described well on Commerce and State Department web pages at:

<https://www.bis.doc.gov/index.php/forms-documents/federal-register-notices-1/2220-cats-i-iii-myths-v-facts-posted-5-24-18/file> and <https://www.state.gov/t/pm/rls/fs/2018/282485.htm>

We encourage all those reviewing the proposed rules and the public comments to read these fact sheets to learn what the proposed regulatory rationalizations of U.S. controls on the export of

¹ For additional information on NSSF, please see www.nssf.org.

commercial firearms and related ammunition are and, as importantly, are not. So that the policy objectives behind the proposed changes, as well as the “myths” associated with them, are knowable to all those reviewing the proposed rules, we ask the Commerce Department to republish their essential content in the preamble to Commerce’s final rule. In this way, they will be part of the official record and help inform comments on final agency decisions made regarding the proposed rules.

As better described by these fact sheets and in the preambles to the proposed rules, commercial firearms and related items that are widely available in retail outlets that are now subject to the export control licensing jurisdiction of the State Department under the International Traffic in Arms Regulations (ITAR) on its U.S. Munitions List (USML) Categories I, II, and III would be transferred to the licensing jurisdiction of the Commerce Department’s Export Administration Regulations (EAR) in a series of new and coherently organized Export Control Classification Numbers (ECCNs). These proposed rules are the logical continuation of an effort began in 2010 under the Obama Administration to modernize the administration of U.S. export control regulations “to create a simpler, more robust system that eases industry compliance, improves enforceability, and better protect America’s most sensitive technologies.” We agree with the objectives of these bipartisan and widely supported changes. The proposed changes merely align the regulations with the nature of the items at issue, thus more efficiently accomplishing the national security and foreign policy objectives of the controls. Such changes reduce unnecessary burdens for both the U.S. Government and U.S. industry.

We have reviewed the proposed rule thoroughly with our membership. Except with respect to several of our comments set forth below, most members have told us that the final versions of the rules would eventually be beneficial because they would significantly reduce the overall burden and cost of complying with controls on the export of commercial firearms and ammunition. All who responded told us that there would be an initial short-term increase in burden and cost because of the need to re-classify thousands of commodity, software, and technology line items and SKUs affected by the new rules, but that the long-term regulatory burden reduction would significantly outweigh the short-term need to adjust internal compliance programs and practices. There would also be significant short-term costs and burdens associated with the need to become familiar with the nuances of the EAR and new BIS licensing officers. However, this burden, we believe, would be largely addressed by BIS’s long-standing commitment of industry outreach and training resources, which we appreciate.

Our members understand that there would be no change to the licensing policies for end item firearms and related ammunition. If a gun required a license to export when it was regulated by the State Department then it would require a license to export when it is regulated by the Commerce Department. If an export to a particular destination or end user would have been denied or approved before, it would be denied or approved in the same manner under the new rules. Applications would go through the same interagency review process, including by the Defense Department and also the State Department’s human rights and other experts. Under the new rules, no approvals would be converted to denials or denials to approvals.

Nonetheless, most of our members, particularly the small- and medium-sized companies, believe that the changes will be economically beneficial for them because the eventual regulatory

simplification and cost reductions will allow them to consider exporting when they might not have otherwise. Those that already export believe they will be able to expand sales of exports that would have otherwise been approved. They hold these views because BIS and the EAR are simply better able to regulate commercial items than are DDTC and the ITAR. This is not meant to be a slur of DDTC staff, which is excellent. It is merely a reflection of the fact that the ITAR exists to regulate the export of defense articles that provide a significant military or intelligence advantage in a “one size fits all” type approach with regulatory requirements that are more relevant to the export of a fighter aircraft than something that can be purchased at a retail outlet. The EAR exists to regulate dual-use, commercial, and less sensitive military items that warrant control, but in more tailored ways to fit the specific national security and foreign policy, including human rights, issues posed by the items.

These conclusions have been proven thousands of times through the application of similar export control reforms for other sensitive commercial or less sensitive military items that have been transferred to Commerce’s jurisdiction over the course of the last eight years. For example, under the Commerce system, there are no fees to apply for licenses. There are no redundant registration requirements for domestic manufacturers. There are no fees for registration. Such fees are bearable for large companies, but often not for small- and medium-sized companies. The license application forms are vastly simpler. Controls on less sensitive and widely available and basic parts, components, and technology are more tailored and allow for less burdensome trade with close allies through license exceptions. Sales with regular customers can be combined in to fewer license applications, thus reducing overall paperwork to achieve the same policy objectives. **There are many other benefits to the proposed changes as well described in the proposed rules’ preambles, but our essential conclusion is that, particularly with the changes recommended below, they will lead to growth for U.S. companies, more jobs in the United States, and related economic benefits for the cities and states where the members reside while accomplishing the same national security and foreign policy objectives they have always had.**

Notwithstanding our overall approval of the proposed rules, we have the following comments and suggested edits that would make the rules even more efficient and consistent with the overall objectives of the effort.

Specific Comments

I. ECCN 0A501 – Firearms (except 0A502 shotguns) and related commodities as follows (See List of Items controlled)

A. Subparagraph .e -- Define “Complete Breech Mechanism”

ECCN 0A501.e includes “complete breech mechanisms,” which is a term carried over from the current USML Category I(g). Neither State nor Commerce has defined this term and industry has struggled over the years with varying, informal definitions of the term. Are they individual bolts or bolt carriers? Are they assembled units of the bolt including all the other minor parts? Or are they firearm actions that include the receiver, all the breech and fire control parts, but without the barrel or stock?

RECOMMENDATION I.A.: To reduce regulatory burden and enhance compliance with the control, we request that BIS define the term in a manner consistent with industry standards, such as “complete breech mechanism, which is defined as an assembled unit consisting of the breech block, plug or bolt, including all parts and components necessary for operation of the mechanism.”

B. Subparagraphs y.2, y.3, and y.4 – Maintain EAR99 Status

We understand the objective of this and other .y subparagraphs created as part of the reform effort, which is to list in one place extraordinarily basic, widely available items that are nonetheless specially designed for controlled items and would otherwise get caught in and over-controlled by .x paragraphs. This is a rational approach and we are not objecting to it in general. However, another equally core and rational element of the reform effort is to not change the classification status of items that have been previously determined to be EAR99 items in formal determinations. ECCN 0A501.y contains the following three types of items we know to have been officially determined to be EAR99 for many years: (i) subparagraph y.2 - Scope mounts and accessory rails; (ii) subparagraph y.3 - Iron sights; and (iii) subparagraph y.4 - Sling swivels.

Converting these types of items to a .y control would thus be inconsistent with the reform effort in general, past practice, and several statements in the proposed rule’s Supplemental Information. For example, the proposed rule states that “for purposes of new ECCN 0A501 and the rest of the new ECCNs described [in the proposed rule], items previously determined to be “subject to the EAR” under a commodity jurisdiction determination issued by the U.S. Department of State **that were designated as EAR99 would generally not be classified in any of the new ECCNs that would be created with this proposed rule.** This would be consistent with Supplement No. 1 to Part 736, General Order No. 5, paragraph (e)(3) (Prior commodity jurisdiction determination) and the paragraph (b)(1) release from “specially designed.” (emphasis supplied). The Supplemental Information section goes on to state, with respect to General Order No. 5, that “items previously determined to be “subject to the EAR” and designated EAR99, would not be classified in a new ECCN being created to control items moved from the USML to the CCL, unless specifically enumerated by BIS in an amendment to the CCL. **“For example, most swivels and scope mounts for firearms have previously been determined through the CJ and classification process to not be ‘subject to the ITAR’ and designated as EAR99. The classification of such ‘parts’ would not be changed, provided the ‘part’ was not subsequently changed, which would require a separate jurisdiction and classification analysis.”** 83 FR at 24172.

The commodity jurisdiction and classification determinations of which our members are aware for mounts, rails, sights, and swivels over the years have concluded that they are EAR99 items, except in specific cases where the part replaces a component of the firearm and is no longer an independent attachment that can be easily removed, or is integrated into a component of the firearm. These conclusions were reflected in the following BIS answer on its FAQ website for firearms: “Q: What is the ECCN for mounts for optical sighting devices for firearms? A: Mounts, bases, rings and rails are EAR99.”

RECOMMENDATION I.B.: We request that the parts in subparagraphs .y.2, .y.3, and .y.4 be removed from ECCN 0A501 and that a Note be added to the ECCN confirming that they remain EAR99 items. The parts are extraordinarily low technology items and widely available throughout the world. If BIS nonetheless determines that controls are needed for certain types of mounts and rails, then we recommend changing the description for subparagraph .y.2 to “scope mounts and accessory rails that are integral to a firearm part or otherwise replace a firearm part necessary for the operation of the firearm.” This revision and split between EAR99 and .y paragraph will allow for the same controls DDTC placed on different types of individual parts.

C. Note 1 to 0A501 – Rationalize Controls Over Antique Firearms and Muzzle Loading Black Powder Firearms

The proposed note states that “Antique firearms (i.e. those manufactured before 1890) and reproductions thereof, muzzle loading black powder firearms except those designs based on centerfire weapons of a post 1937 design, BB guns, pellet rifles, paint ball and all other air rifles are EAR99 commodities.” We appreciate the note, but it would lead to increases in controls on several types of items.

1. Antique Firearms

The Note defines antique firearms as “those manufactured before 1890 and reproductions thereof.” Under the current ITAR controls, antique firearms are controlled under USML Category I(a), but a license exemption exists under 22 CFR § 123.17(b) that allows exports without a license of “firearms covered by Category I(a) . . . if they were manufactured in or **before 1898**, or replicas.” BIS’s proposed definitional change of antique firearm from the ITAR’s 1898 point to 1890 is significant because it will require BIS licensing of certain antique rifles now exempt from license requirements under the ITAR. For example, early Winchester rifle Models 1892, 1894, and similar would be controlled far more strictly than is the case now. There is a significant collector market worldwide for such antique American rifles. U.S. companies and others have used the ITAR exemption to satisfy that demand for years without any threats to American national security or foreign policy objectives.

In addition, both of these controls are more restrictive than the Wassenaar controls which are pre-1890 for antique handguns, but actually are pre-1938 for antique rifles. See <https://www.wassenaar.org/app/uploads/2018/01/WA-DOC-17-PUB-006-Public-Docs-Vol.II-2017-List-of-DU-Goods-and-Technologies-and-Munitions-List.pdf> (page 175 ML1.a, note A).

RECOMMENDATION I.C.1.: We request BIS to revise Note 1 so that the definition of antique firearms is aligned with the Wassenaar controls. If BIS is not willing to consider this change, we request BIS change the date threshold in the definition of antique firearm in Note 1 from 1890 to 1898 so that it is consistent with the ITAR’s exemption.

2. Muzzle Loading Black Powder Firearms

The proposed Note 1 states that “muzzle loading black powder firearms except those designs based on centerfire weapons of a post 1937 design.” This wording is a revision of what is

currently controlled under ECCN 0A018.c, which is “Muzzle loading (black powder) firearms with a caliber less than 20 mm that were manufactured later than 1937 and that are not reproductions of firearms manufactured earlier than 1890.” A note to current 0A018.c states that **“0A018.c does not control weapons used for hunting or sporting purposes that were not “specially designed” for military use** and are not of the fully automatic type, but see ECCN 0A984 concerning shotguns.” (emphasis supplied).

The Note clearly states that those firearms that are used for hunting and sporting purposes are not controlled under that entry. This policy has been in effect for decades with no apparent harm to national security or foreign policy objectives. In the proposed Note 1 to 0A501, however, the statement regarding control of weapons used for hunting and sporting purposes has been removed. The proposed rule also does not state why such a change is necessary. The change is more than a housekeeping edit because it will cause a number of muzzle loading rifles that are now EAR99 items to be controlled as regular firearms under 0A501.a. The new wording also adds confusion by saying muzzle loaders are EAR99 “except those designs based on centerfire weapons of a post 1937 design.” This would add controls to modern muzzle loading rifles that operate with bolt mechanisms but that look like regular centerfire rifles (e.g. Savage ML10), but have completely unique parts that are not compatible with a centerfire rifle that fires conventional cartridges.

RECOMMENDATION I.C.2.: We request BIS to revise Note 1 to delete the phrase “except those designs based on centerfire weapons of a post 1937 design.”

3. Combination Firearms

Neither ECCN 0A501 (firearms) nor ECCN 0A502 (shotguns) refer to firearms that are a combination of shotgun and rifle, i.e., that have two barrels. Such combination firearms normally include one rifled barrel which fires conventional cartridges and one smooth-bore barrel that fires shot shells. Some types of combo firearms may be based on shotgun actions, while others may be based on rifle actions.

RECOMMENDATION I.C.3.: We request that BIS state where on the CCL such combination firearms should be controlled.

II. **0A502 Shotguns; complete trigger mechanisms; magazines and magazine extension tubes; complete breech mechanisms; except equipment used exclusively to treat or tranquilize animals, and except arms designed solely for signal, flare, or saluting use.**

A. Align Availability of License Exception LVS with 0A501

Unlike ECCN 0A501 (firearms), ECCN 0A502 does not include any list-based license exceptions. The export of, for example, a 0A501 trigger or magazine would be eligible for License Exception LVS but the export of a 0A502 trigger or magazine would not. Thus, the entry, as proposed, would control more strictly without any obvious policy benefit the basic low-value parts and components in 0A502 that would be eligible for LVS exports under 0A501.

RECOMMENDATION II.A.: In order to have consistent controls and exceptions for similar items, we request that BIS allow the use of License Exception LVS for 0A502 parts and components to the same extent proposed for 0A501 for the same types of items, such as shotgun trigger mechanisms, magazines, and magazine extensions. This could be done with the following edits to the proposed rule:

- i. Change the ECCN heading to “Shotguns and related commodities as follows (See List of Items controlled), except equipment used exclusively to treat or tranquilize animals, and except arms designed solely for signal, flare, or saluting use.”
- ii. Include in the List of Items Controlled new subparagraphs to separately list breech mechanisms, and the remaining components (e.g., “including complete trigger mechanisms; magazines and magazine extension tubes”) with a corresponding Reason for Control which allows for use of exception LVS to the same extent as proposed for 0A501.

B. Define “Complete Breech Mechanism”

The ECCN 0A502 heading includes the term “complete breech mechanisms” as part of the control. As discussed above, the U.S. government has not defined the term and there is significant industry confusion regarding its meaning.

RECOMMENDATION II.B.: We request that BIS define the term in a manner identical to a definition that would be applicable to 0A501.

C. Resolve Inconsistency Regarding Use of Term “Combat Shotgun”

The “Related Controls” part of ECCN 0A502 states that “This entry does not control combat shotguns and fully automatic shotguns. Those shotguns are ‘subject to the ITAR.’” State’s proposed rule, however, would remove references to “combat shotguns” and use the phrase “Fully automatic shotguns regardless of gauge” instead.

RECOMMENDATION II.C.: We request that the reference in 0A502’s “Related Controls” note be made consistent with how such shotguns are referred to in the revised USML Category I.

III. 0A504 Optical sighting devices for firearms (including shotguns controlled by 0A502); and “components” as follows (see List of Items Controlled)

A. Make License Exception LVS Available for 0A504.g Items

Unlike parts and components for many 0A501 items, the proposed 0A504.g (“Lenses, other optical elements and adjustment mechanisms”) does not allow for the use of License Exception LVS.

RECOMMENDATION III.A.: To align the availability of the exception for similarly significant items on 0A501, we ask that License Exception LVS be available for 0A504.g components, which are insignificant relative to the other items in 0A501. Given the sensitivity of the other optical items in 0A504, we are not requesting such a change for other items in the entry.

B. Note 1 to 0A504.f

The proposed Note 1 to 0A504.f states that “0A504.f does not control laser boresighting devices that must be placed in the bore or chamber to provide a reference for aligning the firearms sights.” There are, however, a variety of bore sighting devices that are placed over the muzzle of the barrel instead of inside the bore or chamber. Such devices perform the same function as those described in the proposed note.

RECOMMENDATION III.B.: We request that this Note be revised to read as follows: “0A504.f does not control laser boresighting devices that provide a reference for aligning the firearms sights. This includes any laser boresighting device, regardless of how it attaches to the firearm (e.g. boresights that fit over the muzzle of the barrel), which performs the same function.”

IV. 0A505 Ammunition as follows (see List of Items Controlled)

A. Remove 0A018 and Transfer Controls to 0A505

One of the organizational changes inherent in the reform effort is the movement of military items once controlled in -018 entries into new 600 or 500 series entries. With this change, similar items are clumped together in the same places on the CCL. If an exporter wants to identify the military items on the CCL, it would look to the 600 series entries. The proposed rule follows a similar approach by combining all the various commercial firearm, ammunition, and related items in a new set of 500 series ECCNS. Such changes increase compliance by reducing the risk of an exporter missing a control in a stray ECCN.

RECOMMENDATION IV.A.: We request that all commercial firearm, ammunition, and related items be in one of the series of new 500 series ECCNs and not left behind in legacy -018 entries. Once the items to be controlled in the proposed 0A018.b are moved to 0A505, and controlled in the same manner, then 0A018 could be removed because all its other subparagraphs have already been consolidated with other new ECCNs.

B. Resolve Inconsistencies between Proposed 0A018.b and 0A505

The items described in proposed 0A018.b have been revised and rewritten into the proposed changes to USML Category III and the new ECCN 0A505. Leaving ECCN 0A018.b unchanged would cause confusion and potential compliance mistakes due to the overlap of controlled items as listed in new ECCN 0A505. For example, 0A505.d states that AT-only and UN controls apply to blank ammunition but does not refer to the note in 0A018.b that excludes dummy ammunition for control.

RECOMMENDATION IV.B.: When consolidating the controls of 0A018.b into 0A505, redundancies and inconsistencies should be removed. For example, 0A018.b's control over specially designed components should become part of the standard .x specially designed catch-all provision that is in 0A505. We also request that the de-control note in 0A018.b be transferred to 0A505 so that the current EAR99 status of such items is maintained. If there are policy reasons to remove dummy ammunition from its EAR99 status, we ask that the reasons for control provisions applicable to dummy ammunition in 0A505.d be limited to existing UN and AT-only controls for blank ammunition.

C. Allow for Use of License Exception LVS

Proposed ECCN 0A505 includes an allowance for license exception LVS of \$100 for subparagraph .x "parts" and "components." As discussed, the proposed 0A501 would have an LVS allowance of \$500 for firearm parts and components. This difference will cause additional licensing burden, especially for small and mid-sized ammunition exporters. Ammunition components have seen major increases in cost over the last 10 years. In addition, the higher cost big bore and precision loads are becoming more popular with foreign buyers. This will make the \$100 LVS allowance too low to be relevant to BIS's objectives in proposing it. For example, Norma .470 Nitro Express empty brass is priced at approximately \$4 per unit, or \$100 per box of 25. Under the proposed LVS limit of \$100, only one small box could be exported under the exception. For two boxes, a license would be required.

RECOMMENDATION IV.C.: We request BIS to raise the value limit for the LVS exception to \$500 to match that allowed for firearm components. We believe this is reasonable since the controls in place now under ECCN 0A018.b have an LVS allowance of \$3000 for "specially designed" components and parts for ammunition, and this allowance is much higher than the \$500 we are requesting.

RELATED RECOMMENDATION IV.C.2.: As this example indicates, inflation can alter the policy judgments made with respect to the first allowance for the use of License Exception LVS for items. Thus, we ask BIS to consider pegging and periodically revising License Exception LVS amounts to roughly scale with inflation over time for the items at issue.

V. 740.9 Temporary imports, exports, reexports, and transfers (in-country) (TMP)

A. Allow for Use of License Exception TMP to Transfer Items to Affiliates

Revised paragraph 740.9(a) restricts use of License Exception TMP for firearms under 0A501.a and .b, and shotguns with barrel length less than 18" under 0A502. It states: "The only provisions of this paragraph (a) that are eligible for use to export such items are paragraph (a)(5) of this section ("Exhibition and demonstration") and paragraph (a)(6) of this section ("Inspection, test, calibration, and repair")." The revision thus excludes the possible use of paragraph (a)(10) for temporary exports to a U.S. Person's foreign subsidiary, affiliate, or facility abroad if for manufacturing, assembling, testing, producing, or modifying the item. There are a number of US firearm and ammunition manufacturers with foreign parent companies or that have foreign subsidiaries or facilities that would use TMP for the purposes set out in paragraph

(a)(1). Many of these companies use DDTC DSP-73 Temporary Export Licenses in order to send commodities back and forth with their foreign parent or subsidiary particularly since many new products are jointly engineered and require input from both parties. Prohibiting the use of paragraph (a)(10) for transactions between affiliates will cause an unnecessary burden to these companies and one in excess of current burdens under State's existing licensing practices for affiliate transactions.

RECOMMENDATION V.A.: We request BIS to allow for the use of License Exception TMP paragraph (a)(10) for firearms controlled under 0A501.a and .b, and shotguns with barrel length less than 18" under 0A502. DDTC granted similar authorizations without issue for such items. This change would essentially maintain the status quo with DDTC's long-standing practice. Requiring exporters to get licenses from BIS to permanently export items to its affiliates for such joint efforts that are intended to result in products to be returned to the United States would not be efficient.

B. Adjust the TMP Limitation to 100 Firearms per Shipment from 75 per Shipment

Revised TMP paragraph (a)(5) states that "paragraph (a) may not be used to export more than 75 firearms per shipment." This number does not take into account the variety and volume of products that major companies normally export for trade shows. For example, it is not unusual for nearly 100 variations of a company's product line to be sent to the IWA Show in Germany each year.

RECOMMENDATION V.B.: We ask BIS to increase the number of items allowed for temporary export under paragraph (a)(5) to 100 per shipment to more closely align with commercial expectations and practices. This change will not reduce government visibility into what is exported because revised paragraph (a) would require that "the exporter or its agent must provide documentation that includes the serial number, make, model, and caliber of each firearm being exported by filing these data elements in an EEI filing in AES."

C. Provide Guidance Regarding the Import of Goods Temporarily Exported

The proposed rule would add the following sentence to section 740.9(b): "No provision of paragraph (b), other than (b)(3), (b)(4), or (b)(5) of this section, may be used to export firearms controlled by ECCN 0A501.a, .b or shotguns with a barrel length less than 18 inches controlled in ECCN 0A502." This would prohibit the use of License Exception TMP paragraphs (b)(1) (exports of items temporarily in the United States) and (b)(2) (items imported for marketing or display at U.S. exhibitions or trade fairs) for exports of firearms and shotguns with less than 18" barrels.

Paragraph (b)(2) relates to temporary imports for exhibition or marketing. New paragraph (b)(5) essentially replaces (b)(2) insofar as it concerns firearms and certain shotguns. New paragraph (b)(5) details the process for temporary import and subsequent export of these items. The proposed process in this regard is fair and reasonable. It is common practice to cite the regulatory exception for the temporarily imported commodities at the time of import, then

reference the import documents at time of return export of the goods. We believe the process as described will not cause any additional burden to exporters.

RECOMMENDATION V.C.: BIS has provided a clear process for temporary imports under the new paragraph (b)(5). However, the regulations are not clear about the process regarding imports of goods temporarily exported under TMP. We recommend BIS provide similar guidance for temporary exports which explains the process for return importation of the commodities.

D. Allow TMP paragraph (b)(1) to be Used

Paragraph (b)(1) authorizes the temporary import and subsequent export of “Items moving in transit through the United States.” The proposed new sentence in paragraph (b) does not allow this paragraph to be used for firearms controlled by ECCN 0A501.a, .b or shotguns with a barrel length less than 18 inches controlled in ECCN 0A502. Currently, these types of transactions are authorized by DDTC on a DSP-61 Temporary Import License. Requiring a BIS export authorization for items moving in-transit through the US to a third country seems unnecessarily burdensome.

RECOMMENDATION V.D.: We ask BIS amend the new sentence in paragraph (b) and allow use of paragraph (b)(1) for firearms controlled by ECCN 0A501.a, .b or shotguns with a barrel length less than 18 inches controlled in ECCN 0A502.

VI. 740.14 Baggage (BAG)

The purpose of this license exception is to allow individuals to travel overseas with personal baggage, and to make allowances for certain types of controlled commodities. The proposed rule adds a new paragraph (e) “Special provisions for firearms and ammunition.” The revisions regarding use of license exception BAG include requirements for filing data in the Automated Export System (AES), which is extremely problematic for individuals.

The proposed rule states that “BIS is proposing to modify § 758.1 of the EAR to make clear that **exporters would continue to be required to file** Electronic Export Enforcement (EEI) to the **Automated Export System (AES) for transactions involving such firearms and associated ammunition that are otherwise authorized pursuant to License Exception BAG.**” BIS, however, acknowledges the problems related to the requirement for individuals to file data in the AES system when it states that “BIS is aware that U.S. Customs and Border Protection (CBP) has temporarily suspended the requirement to file EEI to the AES for personally-owned firearms and ammunition that are ‘subject to the ITAR’ being exported under 22 CFR 123.17(c), due to operational challenges related to implementation.” BIS goes on to state that “Whether and how BIS includes this requirement in a final rule would be **based on whether CBP is able to update its processes, and other agencies as needed, to allow for individuals to easily file EEI in AES by the time a final rule is published.** If CBP is not able to do so, then the final rule may direct exporters to continue to use CBP’s existing process, which is the use of the CBP Certification of Registration Form 4457, until a workable solution is developed or CBP suggests

an alternative simplified solution for gathering such information for temporary exports of personally-owned firearms and ammunition.”

In 2011, DDTC published a Federal Register notice of proposed rulemaking (76 FR 16353, March 23, 2011) titled “Exemption for the Temporary Export of Chemical Agent Protective Gear” principally revising the exemption related to personal protective equipment, but also including a revision to the firearm exemption as follows: “an exemption for firearms and ammunition is clarified by removing certain extraneous language that does not change the meaning of the exemption.” In fact, the proposed change was much more significant and new wording to be included in the exemption was as follows: “The person . . . presents the Internal Transaction Number from submission of the Electronic Export Information in the Automated Export System per §123.22 of this subchapter. . . .” Neither the title nor the summary of the notice mentioned the substantive modification to the procedures regarding the exportation of firearms and ammunition. The only reference to the change to export requirements was a reference to the removal of “extraneous language.” The notice actually confused the public by stating in the summary that the meaning of the regulations had not changed. As a result, the public was not informed that changes to the exportation process had been proposed and that they should or could provide comments on these possible changes. The rule was published as final on May 2, 2012 (77 FR 25867).

In 2014, DDTC and CBP began enforcing the change, and it caused a major upheaval for individuals travelling overseas with firearms. As BIS noted in the proposed rule, CBP temporarily suspended the requirement for AES filing due to the implementation issues.

There are several reasons why AES is the wrong system for individuals to use:

1. The system is meant for commercial exports. There are a number of required data fields that are not applicable to exports by individuals carrying personal property.
2. The AES system requires an Employer ID Number (EIN) before a user can submit any data. It does not allow individuals to access the system with a Social Security Number. In fact, the allowance for a SSN was removed by Census in 2010 due to privacy concerns.
3. There is conflicting information on the Census website and the IRS website regarding an individual obtaining an EIN. While both agencies have guidance indicating that individuals may obtain an EIN for purposes of filing in AES, **there is no written policy or regulation to support this.** In fact, when the individual requests an EIN, they must make several assertions in the form that the purpose is for establishing a business concern. They are required to sign the form under penalty of perjury, declaring that all the information is true and correct, when in fact the individual is not establishing a business.
4. There are multiple fields in AES related to commercial exports, including port of export, type of export, license codes, and Harmonized Tariff System (HTS)/Schedule B commodity codes. Individuals generally have no knowledge

of this information and at best can only take guesses at the correct data to input. For example, the port of Los Angeles has five different codes. Which one is correct for that person's travel? For commodity codes, how is an individual supposed to understand the complexity of the numbers and pick the correct one? All this information is a common and ordinary part of commercial exports, but not for personal carries.

5. The AES system is implemented under the Foreign Trade Regulations (FTR) which carries authority for penalties for inaccurate information entered into AES, up to \$10,000. Individuals trying to use the AES system are at extremely high risk for penalty because they lack the knowledge to ensure the data is accurately entered in the electronic system. And, as described above, the system is not designed for use by individuals with personal baggage. Therefore, the risk of inadvertent violations is extremely high even with the best compliance intentions.

The BAG exception as revised would thus impose unduly burdensome requirements and compliance traps on hunters, competitive shooters, and other U.S. residents who wish to take firearms out of the country on a temporary basis for lawful purposes. According to American Hunter magazine, there are likely more than 100,000 American hunters who travel abroad every year with their firearms. Typical hunting trips can cost \$10,000 to \$25,000, or more.

Finally, the AES requirement applies only to new paragraph (e)(3) "Special provisions for firearms and ammunition." Current BAG paragraphs (e)(1) and (e)(2) regarding "Shotguns and Shotgun Shells" are not changed, and do not include a requirement for AES filing of export data. BIS has never required AES filing for temporary exports of shotguns under BAG. Until 2012, DDTC had never previously required AES filing for temporary exports of firearms.

RECOMMENDATION VI: As we proposed to DDTC and CBP in 2014, we recommend an alternate to the AES system as follows:

1. Rather than trying to force the AES system to fit the purposes of this data collection, we recommend that CBP develop a simple online interface that uses the individual's passport number as the reference number. Every person leaving or entering the US must present a passport to CBP, and CBP has an electronic system to review the individual's passport data.
2. Under the current process, individuals travelling overseas with firearms are completing the CBP Form 4457 "Certificate of Registration for Personal Effects Taken Abroad" to register their firearm for export and reentry. This form includes details regarding the property being carried as baggage, including details of the firearm (model, caliber, serial number). There have been indications that CBP is planning to implement an electronic version of this paper form. An electronic Form 4457 could be linked to the passport review system. This would allow CBP officers to see not only the individual's passport information, but also any personal property including firearms being taken out of the U.S. and for review upon re-entry to the U.S.

VII. 743.4 Conventional Arms Reporting

This section details the U.S. obligations for special reporting requirements for exports of certain items listed on the Wassenaar Arrangement Munitions List and the UN Register of Conventional Arms. Participating States of the Wassenaar Arrangement exchange information every six months on deliveries to non-participating states of conventional arms set forth in the Wassenaar Arrangement's Basic Documents. Similar, although not identical, information is also reported by the U.S. Government to the United Nations on an annual basis.

The proposed rule would “revise paragraph (c)(1)(i) and (c)(2)(i) to add ECCN **0A501.a and .b (firearms) as commodities that would require Wassenaar Arrangement reporting and United Nations reporting** under this conventional arms reporting section of the EAR . . . the reporting requirements under § 743.4(c)(1)(i) and (c)(2)(i) would be limited to exports authorized License Exceptions TMP, GOV and RPL.”

The EAR does not now require exporters of any other type of item to make any such reports to the Wassenaar Arrangement. The proposed change would thus unfairly focus additional regulatory burdens that do not now exist on the ITAR or the EAR for exporters of firearms. We do not see any policy benefits for this new obligation, particularly since the US government already would have such information and could continue making such reports as it usually does. For example, under the proposed changes to Part 758 “Export clearance requirements,” new paragraph 758.1(b)(10) requires electronic export information (“EEI”) to be filed for all exports of 0A501 .a or .b firearms in the AES system. This will include exports under exceptions such as TMP, GOV, and RPL. AES records data for every export shipment in real time and would be an instantaneous and reliable method for the U.S. Government (not individual exporters) to gather and sort such information. BIS has reporting responsibility for all exports which the agency approves by export license and therefore already has a process for reporting the required information. We believe that BIS receives daily updates of AES data which includes exports both by license and license exception, and therefore already has the information necessary to comply with the Wassenaar and UN reporting requirements as related to exports under exceptions.

Moreover, we do not believe that any of the Paperwork Reduction Act requirements have been completed for this proposed new collection and reporting obligation. We do not, for example, believe there is a sufficient description of the plan for how the data would be used or that the proposed method has been properly tested to ensure that there is no net increase in regulatory burdens. Or, if there is to be an increase in regulatory burden associated with this new requirement, it is impossible to see how the U.S. government could have come up with an accurate estimate of the new burden based on what is described in the proposed rule. Under Supplement No. 1 to Part 730, it appears that information requests related to Part 743 are included under OMB Collection Number 0694-0137 (License Exceptions and Exclusions). The proposed rule analyzed that collection number with respect to License Exception STA, but the rule did not address the impact of adding the first items to be required to be reported under section 743.4. Moreover, as described, the U.S. government is in a far better position to provide

the requested information that it would already have in its files to the international organization than would be U.S. companies.

RECOMMENDATION VII: We request that BIS delete this new reporting requirement that would impose an unnecessary burden on individual exporters. BIS could far more easily satisfy its obligations to the Wassenaar Arrangement by collecting, sorting, and presenting this information from data it receives from the AES. If BIS nonetheless wants to consider imposing such a novel burden on exporters, we ask that it publish a separate proposed rule on the topic in a manner consistent with the requirements of the Paperwork Reduction Act.

VIII. Part 758 Export Clearance Requirements

A. Delete Proposed AES Reporting Requirements

New paragraph 758.1(g)(4) (“Exports of Firearms and Related Items”) states that “For any export of items controlled under ECCNs 0A501.a or .b, or shotguns with a barrel length less than 18 inches controlled under ECCN 0A502, in addition to any other required data for the associated EEI filing, **you must report the manufacturer, model number, caliber and serial number of the exported items.**” The explanation for the change states this is “to expand the data elements required as part of an AES filing.”

We do not agree with the statement in the proposed rule on page 24180 that such additional requirements would not impose additional new paperwork burdens on exporters. Moreover, we do not believe that this new requirement is compliant with the Paperwork Reduction Act. We do not, for example, believe there is a sufficient description of the plan for how the data would be used or that the proposed method has been properly tested to ensure that there is no net increase in regulatory burdens. Or, if there is to be an increase in regulatory burden associated with this new requirement, it is impossible to see how the U.S. government could have come up with an accurate estimate of the new burden based on what is described in the proposed rule.

We understand that the proposed rule states that the new burden would “ensure law enforcement officials are able to effectively verify that firearms exports are properly authorized and in conformance with all applicable regulations.” We disagree, however, that CBP needs the additional data to verify if the export has been authorized by BIS, either by export license or license exception. CBP’s role is to verify that the shipment consists of commodities approved for export according to the license or exception, not by serial number. Moreover, we question why this data is being required for every export of firearms, and what will be done with the serial number data. In particular, our industry has concerns that aggregating serial number information in this manner could be the start of a firearm registry. None of these issues was apparently addressed in BIS’s or OMB’s PRA analysis. There are many other infirmities with the PRA analysis or the general justification for the new paperwork burden:

1. CBP has a targeted risk assessment program for identifying export shipments which warrant physical inspection. When firearm shipments are thus selected, the exporter provides the CBP officer with copies of the export documents, including packing lists with serials numbers. This is a reasonable basis for review of serial

numbers, and industry does not dispute it. However, CBP does not inspect every firearm export shipment and therefore the rationale to require such records for each shipment is unsupported.

2. Law enforcement agencies, both in the US and abroad, already have an established process with ATF to trace firearms used in crimes. The ATF Tracing Center provides assistance to all international police agencies to assist with their endeavors. Thus, we cannot see why law enforcement would need serial number records of every export shipment of firearms, at the time of export, when the majority of these shipments are never subject to review for illegal activity.
3. This requirement is only applied to firearms controlled under ECCNs 0A501.a or .b, or shotguns with a barrel length less than 18 inches controlled under ECCN 0A502. It does not apply to any other shotguns controlled under ECCN 0A502 which have been under BIS control for decades. Thus, the control is inconsistent with past practice.
4. The serial number requirement is not included in the proposed changes to the ITAR for Categories I, II and III, and therefore is not required for military items such as fully automatic firearms.
5. The AES system does not have the capability to input all the required data. New fields would be needed for each data element. In particular, the volume of firearms exported in a particular shipment can be anywhere from 10 to 1000 units. Requiring this data to be input into an electronic system would be a huge burden and would require companies to spend a massive amount of time and money to establish processes within their IT enterprise systems to input such massive amounts of data.

RECOMMENDATION VIII.A.: We strongly request that BIS delete the new requirement for reporting the manufacturer, model number, caliber and serial number of the exported items in the AES system.

B. Delete Proposed Restrictions in Sections 758.1(c)(1) and 758.10(b)(2)

The proposed change to 758.1(c)(1) would prohibit the use of BAG to export firearms controlled under ECCNs 0A501.a or .b, shotguns with a barrel length less than 18 inches controlled under ECCN 0A502, or ammunition controlled under ECCN 0A505, without the submission by individuals of data in AES. The proposed language in new paragraph 758.10(b)(2) would require non-U.S. persons exiting the U.S. to file export information in the AES system. All the arguments set forth above regarding why AES is the wrong system for individuals to use are equally applicable here. We incorporate them by reference.

RECOMMENDATION VIII.B.: We request that BIS delete the new restrictive wording added to paragraph 758.1(c)(1) and wording in 758.10(b)(2) requiring information to be filed in AES. We note that BIS has indicated that it would only include this requirement if the AES system

was appropriately revised and simplified for use by individuals. Since it is unlikely that such a change could occur prior to publication of a final rule, we request the deletion of the section.

IX. Part 762 Recordkeeping

A. Delete Redundant Recordkeeping Requirements

The proposed revision to section 762.2(a) would add a new subparagraph 11 creating a new recordkeeping requirement for “serial number, make, model, and caliber of 0A501 .a and .b firearms, and shotguns with barrel length less than 18 inches.” This new provision would create an unnecessary and redundant regulatory burden. The Gun Control Act (GCA) is the regulatory framework for records pertaining to firearms. The recordkeeping requirements include acquisition and disposition of all firearms, regardless of whether they are shipped within the US or overseas. The GCA requires all Federal Firearm Licensees (FFL’s) to maintain firearm records. In particular, the GCA requires these records to be maintained for 20 years after the date of disposition. The proposed change requiring records under the EAR is therefore redundant. Further, it could also cause confusion because the EAR record retention period is 5 years, but the GCA’s period is 20 years. In complying with the stated provisions of the EAR, companies may inadvertently violate the GCA.

RECOMMENDATION IX.A: We ask BIS to delete the new requirement for “serial number, make, model, and caliber of 0A501 .a and .b firearms, and shotguns with barrel length less than 18 inches.” Instead, we suggest the paragraph make a cross-reference to the GCA-mandated recordkeeping provisions and that compliance with these requirements constitutes compliance with the EAR’s requirements in this regard.

B. Remove Proposed Recordkeeping Requirements for Warranties

Through a proposed exception to existing recordkeeping exemptions in section 762.3(a), BIS would impose recordkeeping requirements “**for a warranty certificate issued for an address outside the US** for any firearm controlled in ECCN 0A501.a and for shotguns with barrel length less than 18 inches controlled in 0A502.” In its preamble, BIS acknowledges that this amendment “would be an **expansion of the EAR recordkeeping requirements**, but because warranty certificates are already created and kept as part of normal business recordkeeping purposes, this expansion is not anticipated to create any new or increased burden under the EAR, because it is a document that is created in the normal course of business and are records that should be easily accessible. These recordkeeping requirements would assist the United States Government because this information is important to have access to for law enforcement concerns for these types of items.” We struggle to see any understandable rationale for this requirement. Such warranties are not related to the export in any way, and a warranty certificate is not an export control document.

Moreover, warranties are issued by the manufacturer, not the exporter. Many manufacturers do not always issue specific “warranty certificates” to individuals. It is, therefore, not a record kept in the normal course of business. Most manufacturers provide warranty statements in a broad boilerplate statement included in an instruction manual, or on their website. There is thus no

way to know when that information is accessed by a foreign person or sent to “an address outside the US.” There is also the possibility that retaining such information may violate the privacy laws of other countries, such as the General Data Protection Regulation (GDPR) (EU).

RECOMMENDATION IX.B.: BIS has asked for comments on whether the public agrees with the above described changes. We do not agree to the changes and have noted that they represent increased compliance burdens for exporters under the EAR that are not present in the ITAR. BIS has not provided a coherent explanation for why the new recordkeeping burden makes sense, is related to exports, or would be of benefit to the enforcement of the export control laws. We therefore request BIS delete the proposed addition.

X. Recommendation for Effective Date of Final Rule

Throughout the reform effort and during transitions of items from the USML to the CCL, the relevant final rules for most other categories had an effective date of 180 days after publication. This gave exporters of those commodities sufficient time to reclassify their products and implement changes in their enterprise systems to become compliant with the EAR. The later effective date also allowed those companies to continue to obtain export licenses from DDTC without loss of business in the interim. The regulatory change for firearms and ammunition will affect many exporters and involve a significant number of export licenses. Most of these companies have had little exposure to the EAR and will require significant training and outreach to understand the new regulations. The extended effective date will allow these firearm and ammunition exporters sufficient time to learn and implement EAR-centric processes and procedures while still continuing to do business in the ordinary course.

RECOMMENDATION X: NSSF recommends a 180-day effective date for the final rule.

XI. Items Controlled for Firearms Convention (FC) Reasons Destined for End Use in Canada

The proposed amendments to section 742.17(f) would require licenses for the export of FC Column 1 items to Organization of American States (OAS) members, including Canada. The items affected are those controlled by ECCNs 0A501 (except 0A501.y), 0A502, 0A504 (except 0A504.f), and 0A505 (except 0A505.d). 83 Fed. Reg. at 24185. Unchanged would be the licensing policy for such items, which is that they be presumptively approved if their export is supported by an FC Import Certificate or equivalent, unless they are for a proscribed end use or end user. 15 CFR § 742.17.

Given the unique and long-standing defense trade and commercial relationships between the United States and Canada, the EAR generally does not require licenses for the export of items from the United States to Canada for end use in Canada, unless a proscribed person or end use is involved. Indeed, none of the uniquely military items that were formerly ITAR controlled that are now subject to the EAR require a license to export to Canada for end use in Canada. Under the proposed rule, however, non-military, widely available commercial FC-controlled items would have stricter licensing obligations than the same items for export to many other NATO

partners. The EAR is, thus, internally inconsistent in its licensing policies with respect to Canada.

We appreciate that BIS does not have discretion to remove completely licensing obligations for the export to Canada for end use in Canada of the shotguns and other items referenced in the proposed revisions to section 742.17(f) given the U.S. commitments to the OAS under the Firearms Convention described in the section. The U.S., however, does have discretion under the convention to define domestically what an OAS-compliant license would be.

RECOMMENDATION XI: Given that applications to export to Canada FC-controlled items will be presumptively approved if the Canadian government has issued to the importer the required possession and import permits, we ask that a proposed rule be created that would allow BIS to treat such Canadian-issued authorizations as satisfying the U.S. government's obligations under the Firearms Convention. If the Canadian government has already approved the import and the importer, there is little value-added in the United States authorizing exactly the same transaction separately. Such a change, we believe, will significantly reduce regulatory burdens -- for both exporters and the U.S. government -- associated with exports to Canada without harming national security objectives or Firearms Convention obligations. Moreover, we do not believe that the creation of such a rule would be a significant burden for BIS because BIS described several times during its weekly conference calls on the reform effort that one had already been created.

Beth Katz Public Comment Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML)

July 6, 2018

To: Office of Defense Trade Controls Policy, U.S. Department of State
Regulatory Policy Division, Bureau of Industry and Security, U.S. Department of Commerce

In Reference to **FRN 2018-10366** (State) and **83 FR 24166** (Commerce).

I am writing to express my opposition to the proposed regulatory changes published in the Federal Register on May 24, 2018, as "[International Traffic in Arms Regulations: U.S. Munitions List Categories I, II, and III](#)" (DOS_FRDOC_0001-4527) and "[Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List \(USML\)](#)" (83 FR 24166). The proposed changes raise significant concerns for me as a parent, as an American citizen and taxpayer, and as someone who has studied and wrote my graduate thesis on the international small arms trade.

As a parent of a young child, I am deeply concerned about the impact that these changes will have on both global and domestic security for the foreseeable future. The proposed changes would greatly diminish oversight of the export of semi-automatic assault weapons, high capacity ammunition clips and training on such military equipment. The suggested changes would make it more likely that these dangerous weapons will end up in the hands of traffickers, terrorists or cartels and used against US service members. This increases the likelihood for greater destabilization and conflict worldwide as well as for these weapons to be trafficked back into the U.S. for nefarious uses here. The new rule also removes the block on 3D printing of firearms. This will facilitate unregulated gun production in the U.S. and abroad by making it possible for anyone, anywhere, with access to a 3D printer to produce a lethal weapon. By effectively eliminating many means to detect firearms, background checks on domestic sales and end-use controls on international exports for such weapons, these changes could generate many preventable tragedies. These proposed changes will create a world that is less safe for my son and other children to grow up in and to live; and therefore should not be adopted.

As an American citizen, I believe that these proposed changes diminish U.S. credibility in the eyes of the international community and compromise our global leadership. The proposed changes call for transferring gun export licensing from the State Department, an agency with a mission to promote stability, conflict reduction, and human rights, to the Commerce Department, an agency with mission to promote trade. In doing this, we are retreating on our global commitment to human rights and acting as though the export of firearms is just another commodity when the impact of these weapons is far more consequential and deadly. Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research shows that the types of weapons being transferred to Commerce control, including AR-15, AK-47, and other military-style assault rifles and their ammunition, are sought out weapons used by criminal organizations in Mexico and other Latin American countries to perpetrate most of the increasing and record levels of homicides in those countries. The U.S. should not be adopting policies like the proposed changes which amplify this. Rather, we should be working collaboratively, as we have under previous administrations, to find ways to prevent and reduce firearms from being used to carry out human rights violations and crime.

As a U.S. taxpayer, I also find these proposed changes to be fiscally irresponsible. The new rule would transfer the cost of processing licenses from gun manufacturers to U.S. taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of

tracking who is manufacturing weapons would no longer apply to manufacturers of semi-automatic weapons, and the Commerce Department does not charge any fee for licensing. This means that U.S. taxpayers, such as me, will absorb the cost of reviewing applications and processing licenses rather than the gun exporters that benefit from these sales. In addition, U.S. taxpayers also will need to shoulder the costs of having to build the capacity and expertise of the Commerce Department to properly administer the proposed changes. The Commerce Department currently does not have resources to enforce export controls, even before the addition of 10,000 firearms export license applicants as a result of this rule predicted by Commerce (see Department of Commerce Budget in Brief FY2017, p. 57, <http://www.osec.doc.gov/bmi/budget/FY17BIB/AllFilesWithCharts2.pdf>). The Commerce Department's Bureau of Industry and Security's enforcement office, who would be charged to oversee the new changes, does not have staff in Latin America, Africa, or many other parts of the world and is not equipped to take the same level of preventive measures for end-use controls. In stark contrast, the State Department, who oversees these items while they reside on the USML, has developed extensive data, expertise and institutional relations to implement the Leahy Law for security assistance, which can serve as a critical foundation in both pre-license and post-shipment checks to control and verify end uses and end users. The Commerce Department does not have these resources and developing them will come at a substantial cost to U.S. taxpayers.

Finally, as someone who has studied and researched the international small arms trade, I can confidently say that greater regulation, not less as the proposed rule would enable, is needed to curb the disproportionate impact that these weapons have on fueling conflict, terrorism, and crime around the world. One particularly troubling part of the new rule is its reduction of end-use controls for gun exports. It would eradicate the State Department's Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department within State that compiles the U.S. Government's information on human rights violations, decreasing the ability to effectively stop weapons licenses from going to international human rights violators. End-use controls also are weakened by removing the registration of firearms exporters, a requirement since the 1940s. Under the current rules, registration of exporters lets the State Department check an exporter's history whenever a manufacturer or broker requests a license for a particular gun export sale. Migrating the licensing to the Commerce Department will remove new exporters and brokers of these firearms from the State Department database, losing an important part of the evidentiary trail that enables the prosecution of arms traffickers.

It is for all the reasons listed above that I urge you to reject the proposed changes and to keep the items currently listed on the State Department-administered US Munitions List (USML) intact.

Thank you for your time and consideration.

Sincerely,

Beth Katz
Omaha, Nebraska

RE: RIN 0694-AF47 (Commerce) and RIN 1400-AE30 (State)

Dear Mr. Ross and Mr. Pompeo,

Catholic Health Initiatives appreciates the opportunity to comment on the proposed rules to address the Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML). Catholic Health Initiatives (CHI) is a faith-based nonprofit health system operating in 18 states with 100 hospitals and numerous other services and facilities that span the inpatient and outpatient continuum of care. As a Catholic organization, we feel a special call to reduce violence in our communities and around the world.

While these proposed rule touches many aspects of firearm regulation, sales and oversight, CHI is particularly concerned about the transfer of weapon sale regulation from the State Department to the Commerce Department and the negative effect this may have on violence around the world. Firearms, both assault weapons and non-semi-automatic weapons, are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Catholic Health Initiatives

July 9, 2018

Rather, the rule proposes to transfer gun export licensing to the Commerce Department, whose principle mission is to promote trade.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. The types of weapons being transferred to Commerce Department control—including the AR-15, AK-47, and other military-style assault rifles and their ammunition—are among the deadliest personal-use weapons produced in the United States. We also understand they are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. The export of these weapons should be subject to more controls, not less.

We should not export American violence solely to boost economic development, competitive advantage, or other commerce-related goals. We strongly urge the Departments of Commerce and State to rescind this proposed rule.

Thank you for consideration of our comments on this important issue. If you have any questions, please contact me at 303-298-9100 or contact Laura Krausa, Director of Advocacy, at laurakrausa@catholichealth.net.

Sincerely,

A handwritten signature in black ink, appearing to read "Colleen Scanlon". The signature is fluid and cursive, with the first name "Colleen" and last name "Scanlon" clearly distinguishable.

Exports comments VPC Commerce RIN 0694-AF47

**COMMENTS OF THE VIOLENCE POLICY CENTER TO THE U.S. DEPARTMENT OF COMMERCE,
BUREAU OF INDUSTRY AND SECURITY**

RE: RIN 0694-AF47

Submitted via eRulemaking Portal

The Violence Policy Center (VPC) is a national non-profit educational organization working to reduce gun violence through research, public education, and advocacy. The VPC has a particular expertise in researching and monitoring the gun industry and we regularly issue reports and analyses regarding the industry and its products. The VPC has also done extensive research on cross-border gun trafficking.

The VPC has serious concerns regarding the rules proposed by the U.S. Departments of Commerce and State to transfer non-automatic and semi-automatic firearms and ammunition, as well as parts and related defense services currently controlled by Category I, II, or III of the U.S. Munitions List under the International Traffic in Arms Regulations (ITAR), to the control of the Export Administration Regulations (EAR). The proposed transfer would significantly weaken controls on small arms and ammunition and will result in a higher volume of export sales with less transparency and oversight. The ability to prosecute violations will also be impaired. The changes will enhance the risks that lethal weapons widely used for military purposes will end up in the hands of criminal organizations, human rights abusers, and terrorist groups.

The proposed rules treat semi-automatic assault rifles as “non-military.” But many state and non-state groups in importing countries use semi-automatic rifles in armed conflicts, causing enormous damage. U.S. troops use rifles in semi-automatic mode an overwhelming amount of the time. VPC research clearly demonstrates that the types of semi-automatic rifles, handguns, sniper rifles, large-capacity ammunition magazines, receivers, and other parts subject to the new rules are the types of weapons and accessories preferred by cross-border gun traffickers.¹ Moreover, many of the sniper rifles subject to the transfer are in use by military forces.² One particularly problematic rifle is the 50 caliber anti-armor sniper rifle that is capable of downing

¹ *An Ongoing Analysis of the Types of Firearms Illegally Trafficked from the United States to Mexico and Other Latin American and Caribbean Countries as Revealed in U.S. Court Documents*, Violence Policy Center: <http://www.vpc.org/indicted/>.

aircraft on take-off and landing and can pierce light armor.³ In addition, these rifles have been identified as a national security threat by a number of experts and entities.⁴

The devastation that semi-automatic firearms equipped with large-capacity ammunition magazines can inflict is demonstrated by their common use in mass shootings in the United States.⁵

Regarding whether the items described in the proposed rules are widely available in commercial outlets, an issue about which comment has been requested, many of the items are rapidly becoming less available in the United States. Six U.S. states and the District of Columbia prohibit retail sale of semi-automatic assault rifles. Eight states and the District of Columbia ban large-capacity ammunition magazines. Several large retail chain stores have acted to stop the sales of semi-automatic firearms and large-capacity ammunition magazines. For example, Walmart does not sell semi-automatic assault weapons. The store does not sell handguns, except in Alaska. They also do not sell large-capacity ammunition magazines.⁶

Other large retail outlets, such as Dick's Sporting Goods, have recently acted to stop the sales of semi-automatic assault weapons (which the gun industry euphemistically calls "modern sporting rifles"). Dick's is even destroying its unsold inventory of assault weapons.⁷ Finally, many countries prohibit civilian possession of semi-automatic rifles and handguns and the trend is toward prohibiting such weapons. For example, Norway is moving to ban semi-automatic firearms as of 2021. In 2011, Norway experienced one of the worst mass shootings outside of the U.S. The shooter used a Sturm Ruger Mini-14 semi-automatic rifle and a Glock semi-automatic handgun to kill 69 people at a youth camp. Both of these weapons are examples of those that will be transferred to Commerce's control under the proposed rules.

³ For more information on the capabilities of 50 caliber sniper rifles, see the Violence Policy Center's resource page: <http://www.vpc.org/regulating-the-gun-industry/50-caliber-anti-armor-sniper-rifles/>.

⁶ Walmart Statement on Firearms Policy, accessed on July 3, 2018: <https://news.walmart.com/2018/02/28/walmart-statement-on-firearms-policy>.

⁷ "Dick's Sporting Goods plans to destroy all the assault rifles it pulled off its shelves," *CNN*, April 19, 2018: <https://www.cnn.com/2018/04/19/us/dicks-sporting-goods-guns-trnd/index.html>.

Many semi-automatic rifles are also easily converted to fully-automatic firearms. Because military-style assault rifles clearly have substantial military utility, transfer of these firearms to Commerce Department control is inconsistent with the statutory framework enacted by the Congress to regulate the export of arms.

The rules will enable the production and distribution of 3D-printed firearms. When Defense Distributed founder Cody Wilson posted online instructions for 3D-printed firearms, the State Department successfully charged him with violating arms export laws since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The Commerce Department is unlikely to take similar action once such weapons are transferred to their control. Unless corrected, the new regulations run the risk of effectively condoning and enabling 3D printing of firearms in the U.S. and around the globe. This change alone could generate many preventable tragedies while changing the landscape of firearm manufacture, distribution and regulation.

The proposed rules would revise License Exception BAG to allow U.S. citizens and permanent resident aliens temporarily leaving the U.S. to take up to three non-automatic and semi-automatic firearms and up to 1,000 rounds of ammunition for such firearms for personal use while abroad (License Exception BAG). Currently, BAG applies only to non-automatic firearms. The proposed rules create a new exception for semi-automatic firearms and also revise the current rule to allow nonresident aliens leaving the U.S. to take firearms “accessories,” “attachments,” “components,” “parts,” and ammunition controlled by 0A501 or 0A505, provided that these were lawfully brought into the U.S.

The revision to the License Exception BAG is highly problematic considering that semi-automatic weapons can inflict catastrophic damage. If such a weapon is stolen or lost, there will little that can be done to recover the weapon. It will also be much easier for smugglers to take advantage of these exceptions to facilitate trafficking.

No justification is offered for changes to the current BAG framework. As described previously, semi-automatic weapons are prized by criminal organizations and the proposed change is likely to increase the risk of crime and violence.

The proposed rules would eliminate Congressional oversight for important gun export sales. Congress will no longer be automatically informed about sizable sales of these weapons. This change will limit the ability of Congress to comment on related human rights concerns, as it recently did on the Philippines and Turkey. In 2002, Congress acted to require it be notified of sales of firearms regulated by the U.S. Munitions List valued at \$1 million or more. Items moved to Commerce’s control would no longer be subject to such notification. In a September 15,

2017, letter, Senators Ben Cardin, Dianne Feinstein, and Patrick Leahy explicitly noted that this move would violate congressional intent and effectively eliminate congressional oversight.⁸

The rules reduce end-use controls for gun exports. It would eliminate the State Department's Blue Lantern program for gun and ammunition exports, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. It also would move license approval out of the department that compiles the U.S. Government's information on human rights violations, reducing the ability to effectively deny weapons licenses to international human rights violators. End-use controls also are weakened by eliminating registration of firearms exporters, a requirement since the 1940s. Registration of exporters allows the State Department to check an exporter's history whenever a manufacturer or broker requests a license for a particular gun export sale. But the transfer of licensing to Commerce will remove new exporters and brokers of these firearms from the State Department database, weakening enforcement against arms trafficking.

Gun manufacturers are extolling the new rules as an opportunity for increased profits in a climate of declining domestic sales.⁹ At the same time, the new rules would transfer the cost of processing licenses from gun manufacturers to taxpayers. Registration fees that since the 1940s have been used to offset the costs to the government of tracking weapons production would no longer apply to manufacturers of semi-automatic firearms. The government and taxpayers will absorb the cost of reviewing applications and processing licenses. Gun exporters that benefit from these sales should shoulder this cost.

CONCLUSION

The proposed rules would transfer gun export licensing to an agency – the Commerce Department – the principal mission of which is to promote trade. Firearms are uniquely and pervasively used in criminal violence around the world. Controlling their export should be handled by the State Department, which is mandated and structured to address the potential impacts in importing nations on stability, human security, conflict, and human rights.

Firearms are used to kill a thousand people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Research indicates that the

⁸ Letter to Secretary of State Rex Tillerson, September 15, 2017.

⁹ "Trump State Department Looks to Stream Line Firearms Exports & Open US Markets," *Ammoland*, May 15, 2018: <https://www.ammoland.com/2018/05/trump-state-department-looks-to-stream-line-firearms-exports-open-us-markets/#axzz5KDSkQJdz>.

types of weapons being transferred to the Commerce Department's control – including AR-15, AK-47, and other military-style assault rifles such as 50 caliber sniper rifles as well as their ammunition – are weapons of choice for criminal organizations in Mexico and other Latin American countries and are responsible for most of the increasing and record levels of homicide in those countries. The rules are certain to increase the volume of exports of these firearms. The export of these weapons should be subject to more controls, not fewer.

The proposed rules would significantly weaken export controls and oversight of many military firearms highly prized by terrorists, drug-trafficking organizations, and common criminals. Semi-automatic assault rifles, high-capacity ammunition magazines, sniper rifles (especially 50 caliber sniper rifles), and high-caliber firearms should remain on the United States Munitions List (USML).

The requirement that Congress be notified of all sales of former and USML-controlled firearms of more than \$1 million should be retained.

The provision authorizing license-free exports of semi-automatic rifles by citizens and legal permanent residents should be removed.

Respectfully submitted,

Kristen Rand

General Comment

The below comment on the proposed rules by the Departments of State and Commerce supplements the comments submitted by the American Bar Association/Security Assistance Monitor and by Amnesty International USA, which we support. Please see the attached version for complete comment, sources, and notes.

The State Department proposed rule states that those weapons that would stay on the USML are inherently for military end use, adding that the items to be removed from the USML do not meet this standard, including many items which are widely available in retail outlets in the United States and abroad. One State Department official reportedly said: We kind of refer to it as the Walmart rule. If its like something you can buy at a Walmart, why should we have control?

The Commerce Departments description of criteria for items to be moved off of the USML concludes: Thus, the scope of the items described in this proposed rule is essentially commercial items widely available in retail outlets and less sensitive military items. (p. 4) It adds that: There is a significant worldwide market for firearms in connection with civil and recreational activities such as hunting, marksmanship, competitive shooting, and other non-military activities. However, the examples given here are not from prospective importing nations, but from the United States: Because of the popularity of shooting sports in the United States, for example, many large chain retailers carry a wide inventory of the firearms described in the new ECCNs for sale to the general public. Firearms available through U.S. retail outlets include rim fire rifles, pistols, modern sporting rifles, shotguns, and large caliber bolt action rifles, as well as their parts, components, accessories and attachments.

Retail availability in the U.S. should not be a criterion, since this is not the market to which exports treated by the proposed rule will be directed. Moreover, the U.S. retail firearms market is qualitatively and quantitatively

different from nearly every market in the world: with 4.4% of the world's population, the U.S. comprises more than 45% of the world's firearms in civilian possession.

In addition, the statement neglects another significant portion of the worldwide market for firearms: criminal organizations, illegal armed groups, and armed security forces that commit human rights violations.

In many countries, retail availability of all firearms is substantially limited. In Mexico, for example, there is only one retail outlet in the entire country for the legal purchase of any kind of firearm. In the vast majority of countries, according to one of the few studies of firearms regulations, there is a presumption against civilians owning firearms unless certain conditions and requirements are met. (S. Parker, Small Arms Survey, 2011)

Many nations either do not permit or highly restrict civilian use of some or all types of semi-automatic firearms and high-capacity magazines proposed for removal from the USML, and so cannot be said to have any retail availability of these prohibited firearms. Within the United States, semi-automatic rifles and high-capacity magazines are prohibited for retail sale in six states and the District of Columbia. Certain types of handguns and certain calibers of firearms that are included in Category I are also prohibited and not available for retail purchase in some countries.

That purchase and possession of certain types of firearms and ammunition are permitted under national legislation does not necessarily indicate that these items are either widely available or feasible for most people to obtain. Many countries deeply restrict retail availability of all firearms through licensing requirements, which are often extensive and time-consuming.

States impose limitations on the retail availability, types of firearms that may be legally purchased, and licensing process for parties seeking to purchase a firearm because they recognize that guns are not like ordinary commercial items that can be purchased at a store. In many countries, legal markets for firearms blend with illegal markets in vast grey areas of stolen and diverted weapons. The potential and actual negative consequences of the ill use of such firearms are devastating. A coherent, ethical, and politically strategic approach to firearm exports would increase controls to help reduce violent harm by both state and non-state actors that will more easily acquire them under the proposed rules.

The proposed rules do not articulate any requirement for a review by State Department experts on human rights and criminal organizations. If that is the proposers' intent, the rule should state it clearly, and spell out the scope of license applications subject to such review, concurrences required, specifying from which bureaus and agencies, and the competencies of experts who shall conduct reviews.

Comment on Proposed Rules on Categories i-ii-iii by Depts. of State and Commerce
 John Lindsay-Poland, Global Exchange

The below comment on the proposed rules by the Departments of State and Commerce supplements the comments submitted by the American Bar Association/Security Assistance Monitor and by Amnesty International USA, which we support. This comment focuses on the proposed criterion of wide retail availability for firearms and munitions proposed for transfer from the USML to the Commerce Department, and includes brief comments about inter-agency review and about risks of criminal use.

The State Department proposed rule states that those weapons that would stay on the USML “are inherently for military end use,” adding that the items to be removed from the USML “do not meet this standard, including many items which are widely available in retail outlets in the United States and abroad.” (p. 5) One State Department official was quoted in a press report about the proposed rule: “We kind of refer to it as the Walmart rule. If it’s like something you can buy at a Walmart, why should we have control?”¹

The Commerce Department’s description of criteria for items to be moved off of the USML concludes: “Thus, the scope of the items described in this proposed rule is essentially commercial items widely available in retail outlets and less sensitive military items.” (p. 4) It adds that: “There is a significant worldwide market for firearms in connection with civil and recreational activities such as hunting, marksmanship, competitive shooting, and other non-military activities.” (pp. 6-7) However, the examples given here are not from prospective importing nations, but from the United States:

“Because of the popularity of shooting sports in the United States, for example, many large chain retailers carry a wide inventory of the firearms described in the new ECCNs for sale to the general public. Firearms available through U.S. retail outlets include rim fire rifles, pistols, modern sporting rifles, shotguns, and large caliber bolt action rifles, as well as their ‘parts,’ ‘components,’ ‘accessories’ and ‘attachments.’” (p. 7)

The retail availability in the United States should not be a criterion, since this is not the market to which exports treated by the proposed rule will be directed. Moreover, the U.S. retail firearms market is qualitatively and quantitatively different from nearly every market in the world: the United States, with 4.4% of the world’s population,² comprises more than 45% of the world’s firearms in civilian possession.³

In addition, the statement neglects another significant portion of the “worldwide market for firearms”: criminal organizations, illegal armed groups, and armed security forces that commit human rights violations.

In many countries, the retail availability of all firearms is substantially limited. In Mexico, for example, there is only one retail outlet in the entire country for the legal purchase of any kind of firearm.⁴ In China, firearm purchases are banned for most people, and private gun ownership is almost unheard of.⁵ In the vast majority countries, according to one of the few studies of firearms regulations, “there is a presumption against civilians owning

firearms unless certain conditions and requirements are met.”⁶

Belize, Colombia, Israel, Japan, Kenya, Turkey, and United Kingdom do not permit any civilian use of some or all types of semi-automatic firearms proposed for removal from the USML, and so cannot be said to have any retail availability of these prohibited firearms.⁷ Other nations, including Australia, Canada, Croatia, India, Lithuania, New Zealand, South Africa, Switzerland apply special restrictions to civilian possession of semi-automatic firearms, such as proof that they are needed for self-defense, and so it cannot be said that these firearms are “widely available in retail outlets” there. We emphasize that these examples are from only a selected sample of 28 countries; a full accounting of countries where there is only limited or any retail availability of semi-automatic firearms would certainly show many more.⁸ Brazil also prohibits “assault weapons” for civilian purchase, while Chile and Colombia prohibit civilian possession of semi-automatic weapons entirely.⁹

Moreover, within the United States, semi-automatic rifles and high-capacity magazines such as those proposed to be removed from the USML are prohibited for retail sale in six states and the District of Columbia.

Magazines with a capacity of more than 10 rounds are not permitted for civilians in Australia.¹⁰ Brazil, France, Romania, Slovenia, Spain, and Turkey do not permit purchase by ordinary civilians of high-capacity magazines.¹¹ DDTC policy has reportedly excluded export of high-capacity magazines except to military and law enforcement end users,¹² but nothing in the proposed rule indicates that the Department of Commerce would enact such a policy.

Certain types of handguns and certain calibers of firearms that are included in Category I are also prohibited and not available for retail purchase in some countries. In the Dominican Republic, for example, “certain firearms are considered ‘war weapons’ and can only be used by government forces, including .45 calibre pistols [and] rifles,” according a Small Arms Survey study,¹³ while Spain prohibits civilian purchase of firearms with a caliber of 20 mm or higher, which are considered to be “designed for war use.”¹⁴ More types – in some cases all types - of handguns are prohibited for civilian purchase in Belize, Canada, Colombia, Japan, Kazakhstan, the Russian Federation, the United Kingdom, and Venezuela.¹⁵

That purchase and possession of certain types firearms and ammunition are permitted under national legislation does not necessarily indicate that these items are either widely available or feasible for most people to obtain. In addition to prohibitions or restrictions on retail availability of types of firearms, many countries deeply restrict retail availability of all firearms through licensing requirements, which are often extensive and time-consuming. In India, for example, obtaining a license to acquire a firearm requires the applicant to demonstrate training in use of a gun, and often takes years.¹⁶ Japan requires gun buyers to go through 12 processes before purchasing any type of firearm.¹⁷

States impose limitations on the retail availability, types of firearms that may be legally

purchased, and licensing process for parties seeking to purchase a firearm because they recognize that guns are not like ordinary commercial items that can be purchased at a store. In many countries, legal markets for firearms blend with illegal markets in vast grey areas of stolen and diverted weapons, and of private security companies. The potential and actual negative consequences of the ill use of such firearms are devastating.¹⁸ A coherent, ethical, and politically strategic approach to firearm exports would increase controls to help reduce violent harm by both state and non-state actors that will more easily acquire them under the proposed rules.

Processes for gun exports reflect substantive priorities and as such are integral to policy. The National Sports Shooting Foundation (NSSF) claims that under the proposed rule, “Applications would go through the same interagency review process, including by the Defense Department and the State Department’s human rights and other experts.”¹⁹ However, the proposed rules do not articulate any requirement for such a review by State Department experts on human rights and criminal organizations. If that is the proposers’ intent, the rule should state it clearly, and spell out the scope of license applications subject to such review, concurrences required, specifying from which bureaus and agencies, and the competencies of experts who shall conduct reviews.

It should also be noted that Walmart does not operate in more than 100 nations (see: <https://corporate.walmart.com/our-story/our-locations> and that in the United States Walmart does not sell semi-automatic assault rifles, high capacity magazines, or even (except in Alaska) handguns. SAM-CIP Letter BIS Firearms Rule FINAL

Advancing a sustainable, just, and peaceful world

July 9, 2018

Mr. Steven Clagett
Office of Nonproliferation Controls and Treaty Compliance
Nuclear and Missile Technology Controls Division
Bureau of Industry and Security
U.S. Department of Commerce
Room 2099B, 14th Street and Pennsylvania Avenue NW
Washington, DC 20230

Re: Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML), RIN 0694-AF47

Dear Mr. Clagett,

We are writing to express our concerns about the U.S. Department of Commerce's proposed rule, published in the Federal Register on May 24, 2018, to transfer certain firearms, guns, ammunition, and related parts from the U.S. Department of State's U.S. Munitions List (USML) to the U.S. Department of Commerce's Commerce Control List (CCL) under a new 500 series designation. While we were pleased to see that the proposed rule maintained some important controls connected with the USML for the firearms moving to the CCL, we believe the proposed rule will mean more U.S. firearms will be exported with less transparency, fewer oversight mechanisms, and a weaker ability for the U.S. government to prosecute violations.

First, the transfer of certain firearms, guns, and ammunition from USML to the CCL appears to be fundamentally inconsistent with the scope of statutory authority outlined in the Arms Export Control Act (AECA). For more than three decades, the U.S. government has designated many types of firearms and guns that are proposed to move to the CCL as "Significant Military Equipment" (SME) because of their "substantial military utility or capability." According to the AECA, all defense articles designated as SME must be on the USML. While there may be more civilians using these types of weapons now than in the 1970s, most foreign militaries continue to use these types of firearms as standard issue and they continue to have substantial military utility. Moreover, the proposed rule's assertion that the firearms moving over to the CCL, including "Combat Shotguns" and

.50 sniper rifles, has “for the most part,” “civil, recreational, law enforcement, or other non-military applications” and thus deserve limited controls is highly questionable.

Second, because the term “defense article” is linked to several statutes with national security import, the removal of firearms, guns, ammunition, and certain parts from the USML means there would be many rippling implications of the transfer of items from the USML to the CCL under the AECA and the Foreign Assistance Act (FAA). The AECA is a sophisticated statutory framework that enables the United States to more effectively monitor a large volume of arms exports. The proposed transfer impacts various statutes linked to the AECA more broadly and creates ambiguity with the ability of Congress to monitor U.S. assistance to foreign countries through various notification and reporting requirements found in the AECA and the FAA. The transfer of arms to the CCL would undermine that framework.

As outlined in more detail in the below analysis, the U.S. government or the U.S. policy community would lose many key oversight tools and abilities to help prevent irresponsible or illegal firearms trafficking around the world as a result of these proposed changes. In particular, the U.S. government or U.S. policy community (Congress and the public) would have a limited ability to do the following:

- Halt or modify risky proposed firearms sales valued at \$1 million or more to countries such as to Honduras, Turkey, or the Philippines;
- Curb risky exports of pistol grips and magazine clips valued at \$500 or less to over 100 countries, including Mexico and Guatemala;
- Review proposed training on how to aim and fire a gun and other types of foreign police training to countries such as Libya or China;
- Stop nonresident aliens leaving the United States via commercial airlines from taking firearms “accessories,” “attachments,” “components,” “parts,” and ammunition;
- Better understand U.S. firearms manufacturing and ownership to identify risks within the U.S. firearms industry; and,
- Investigate and prosecute companies for failing to properly provide political contributions and marketing fees aimed at curbing corruption.

Additionally, the AECA only permits the sales of defense articles and services for specific reasons, including primarily for legitimate defense purposes.¹ Section 3 of the AECA requires the State Department to notify Congress when there is credible information that such articles or services were misused.² However, there is not a similar requirement connected with the Export Administration Regulations (EAR). The AECA also requires the State Department to publicly report on all authorized and delivered arms exports annually, which has provided Congress and the public with an essential tool to identify potentially illegal trafficking patterns and sales that are inconsistent with U.S.

¹ 22 U.S.C. § 2754.

² 2753(c)(2), <https://www.law.cornell.edu/uscode/text/22/2753>; For more information, see https://www.americanbar.org/content/dam/aba/administrative/human_rights/ABACHRAAssessmentofArmsSalestoSaudiArabia.authcheckdam.pdf

policy. However, the Commerce Department does not have this same requirement nor does it regularly provide the same level of transparency as the State Department.

We are pleased to see that the proposed rule attempts to maintain effective oversight of arms brokers by ensuring that brokers must register and seek a license. These provisions are critical in helping mitigate illegal arms trafficking to major conflict zones and transnational criminal organizations. However, we are concerned that the basis for the State Department's rules is subject to legal challenge because it is not clear that the State Department has the statutory authority to maintain brokering controls if firearms are transferred from the USML. Similarly, we are concerned about the U.S. government's statutory basis to halt arms transfers based on human rights concerns. In 2014, Congress amended the FAA to prohibit the export of Series 600 items to countries "the governments of which engage in a consistent pattern of gross violations of internationally recognized human rights."³ If the proposed rule moved forward as is, the State Department would no longer have a statutory basis for vetoing a proposed sale on human rights grounds for firearms, guns, ammunition, and related parts that move to the CCL.

Given the potential loss of so many U.S. arms export controls and likely negative impact on curbing irresponsible and illegal arms transfers, we encourage you to wait until the Government Accountability Office finishes its analysis of the risks of moving firearms from the USML to the CCL until you move forward on this proposal. If you have decided you want to move forward with moving some firearms, guns, and related parts over to the CCL, we recommend making the below changes to the proposed rule:

- Recognize that semi-automatic firearms are still a weapon of choice for foreign militaries and of significant military value and place firearms under the 600 Series list on the CCL;
- Maintain the requirement to notify Congress and the public of any proposed firearms sales that reach \$1 million or more;
- Limit companies use of the Limited Value Shipments (LVS) license exception to \$100 or severally limit the types of parts and components that are available for the \$500 threshold value;
- Expand the definition of "technology" to capture defense-service type activities that would otherwise be left unregulated such as private security contractor training to foreign police with firearms. Similarly, 3D printing should be considered technology under the EAR;
- Remove or limit the registration fee for manufactures but keep the requirement for the registration;
- Add a mechanism to the CCL that would retain the reporting requirement on political contributions and marketing fees that were paid as part of arms sales.

³ 22 U.S.C. Sec. 2304. 22 USC 2304(a) establishes that no security assistance can go to a country with consistent pattern of gross human rights. 22 USC 2304(d)(2)(C)(ii) defines security assistance to include a license of 600-series items intended for armed forces, police, intelligence or other internal security forces.

For more details on some of these concerns, we are pleased to submit the below report, which provides more details on these main concerns and recommendations. We look forward to speaking with you or any of your colleagues about these important issues. Thank you for the opportunity to submit our comments and recommendations.

Sincerely,

Colby Goodman

Section-by-Section Key Concerns on Proposed Firearms Export Rule

Congressional Notification Requirement

Proposed Change

Under Section 36(c) of the AECA,⁴ if a sale of \$1 million worth of Category I firearms is authorized for export under the ITAR, the President must formally notify Congress 30 days prior to the approval of the ITAR export authorization. Both this formal notification process and the prior informal one provides Congress with the opportunity to review these proposed sales and ensure they are consistent with U.S. law, policy, and interests. Under the current system, if Congress does not agree with the executive branch decision to license the firearms export, it may block or modify the proposed sale. If Category I items are moved to EAR controls, they will not be subject to the AECA notification requirement.

Main Concerns

In the mid 1990s, Congress began requiring the administration to notify it of proposed firearms sales of \$1 million or more because of concerns about the role firearms have consistently played in inflicting serious harm on civilians in conflict and non-conflict zones. Since then, the requirement has allowed both Congress and the public to provide important oversight of U.S. firearms exports. Over the past ten years, Congress has also halted or modified several particularly problematic proposed firearms sales. Just last year, for instance, Congress blocked the sale of semi-automatic handguns and assault rifle sales to the Philippines and Turkey because of concerns that they would be used unlawfully against civilians.⁵ As these congressional notifications are often provided to the public, they have also given the U.S. foreign policy community an opportunity to provide insights on particular risky U.S. firearms sales.

As U.S. companies continue to propose firearms sales to risky countries, it is critical for Congress to maintain its oversight on major sales. From January to December of 2017, the Trump Administration requested Congress to approve at least \$662 million in Category I firearms and ammunition exports to over 15 countries through the congressional notification process.⁶ Of these, potential firearms sales to El Salvador, Honduras, Indonesia, Mexico, Thailand, Turkey, and the United Arab Emirates raised concerns amongst the human rights community and required necessary scrutiny by Congress. In the case of Honduras, Congress had raised several questions to help ensure

⁴ 22 U.S.C. § 2776(c)

⁵ <http://www.middleeasteye.net/news/us-halts-arms-sales-erdogan-bodyguards-1467964562>;
<https://www.reuters.com/article/us-philippines-usa-rifles-idUSKBN12V2AM>

⁶ For more details see Security Assistance Monitor's factsheet, "Congressional Notifications for Proposed U.S. Commercial Firearms Exports in 2017," available at http://securityassistance.org/fact_sheet/congressional-notifications-proposed-us-commercial-firearms-exports-2017

that U.S. weapons would not be used to fire on civilian protestors. These notifications also helped U.S. civil society identify important trends in U.S. firearms sales such as in licensed production.

Recommendation

For these reasons, it is critical that the new rule continue to require the U.S. administration to notify Congress of any proposed firearms sales that reach \$1 million or more.

License Exception LVS (§ 740.3) / License Exception BAG (§ 740.14)

Proposed Changes

Under the proposed rule, U.S. companies are given new opportunities to export certain firearms parts and components without U.S. government prior approval if the net value of the shipment is at or below \$500, which is higher than the \$100 threshold under ITAR. In particular, U.S. companies can use the Commerce Department's License Exception Shipments of Limited Value (LVS) to avoid the license requirement for exports of certain firearms "parts," "components," "accessories," and "attachments", including pistol grips and detachable magazines, to over 100 countries in Country Group B.⁷ Guns and armament and related items controlled under ECCN 0A602 are also eligible for LVS with a limit of \$500 net value per shipment. Further, the rule adds a license exception under LVS for ammunition parts and components with a limit of \$100 per shipment.

The proposed rule would also revise License Exception BAG to allow U.S. citizens and permanent resident aliens temporarily leaving the United States to take up to three non-automatic *and* semi-automatic firearms under 0A501 and up to 1,000 rounds of ammunition for such firearms controlled under 0A505.a for personal use while abroad. Currently, BAG is authorized only for non-automatic firearms. The proposed rule carves out a new exception for semi-automatic firearms and revises the current framework to allow nonresident aliens leaving the U.S. to take firearms "accessories," "attachments," "components," "parts," and ammunition controlled by 0A501 or 0A505, provided that these were lawfully brought into the United States.

Main Concerns

Over the past decade, U.S. criminal prosecutions and research studies have shown how the smuggling of small numbers of firearms on a regular basis can have a large impact on gun violence in Mexico and Central America.⁸ Indeed, trafficking experts have long

⁷ See <https://www.bis.doc.gov/index.php/documents/regulation-docs/452-supplement-no-1-to-part-740-country-groups/file>.

⁸ Small Arms Survey, "Drips and Drabs: The Mechanics of Small Arms Trafficking from the United States," Issue Brief, March 2016, online at <https://www.files.ethz.ch/isn/196408/SAS-IB17-Mechanics-of-trafficking.pdf>.

argued that “small arms and spare parts are the lifeblood of the gray market.”⁹ Instead of trying to improve U.S. efforts to stop this smuggling, the proposed rule seems more aimed at limiting or complicating U.S. government efforts to stop the smuggling of U.S. firearms and relate parts. The new \$500 net value per shipment value under LVS could significantly expand the number of shipments of firearms components such as pistol grips and magazine clips that the U.S. government will not have a chance to review. Similarly, the expansion of the license exception BAG will likely make it harder for the U.S. government to stop the export of potentially problematic exports of semi-automatic firearms at the U.S. border to many countries around the world, including Mexico and in Central America.

Parts and Components Under LVS: Under the proposed changes to LVS, U.S. companies could export the following types of firearms parts and components without a U.S. license to over 100 countries, including Guatemala, El Salvador, Mexico, Somalia, South Sudan, Yemen, and the Philippines if the net value per shipment was \$500 or less:

- 1) “barrels, cylinders, barrel extensions, mounting blocks (trunnions), bolts, bolt carriers, operating rods, gas pistons, trigger housings, triggers, hammers, sears, disconnectors, pistol grips that contain fire control “parts” or “components” (e.g., triggers, hammers, sears, disconnectors) and buttstocks that contain fire control “parts” or “components;” and,
- 2) “detachable magazines with a capacity of greater than 16 rounds “specially designed” for a commodity controlled by paragraph .a or .b of this entry. “

The rule also allows companies to use the LVS for guns and armament related items under ECCN 0A602 in addition to ammunition parts, which can easily be used to make one’s own ammunition.¹⁰ As many of these parts are relatively inexpensive, especially if used, it’s possible for companies or individuals to export many items in one shipment without a U.S. license. Following common practice, firearms traffickers may also increase their number of shipments of firearms components that significantly increase lethality such as pistol grips and magazine clips to questionable clients. Taken together, the U.S. government will lose the ability to stop many types of sales to problematic destinations and end-users.

Semi-Automatic Firearms Under BAG: Over the past five years, U.S. researchers have highlighted how individuals have successfully trafficked U.S. firearms to Mexico and Central America and beyond via commercial airlines using temporary export licenses similar to the BAG license exception.¹¹ While anyone traveling on a plane needs to

⁹ William J. Lowell, Comments on Public Notice 7256 Amendment to the International Traffic in Arms Regulations: Revisions of U.S. Munitions List Category VII; and Public Notice 7257 Revisions to the USML (Feb. 7, 2011)

https://www.armscontrol.org/system/files/Lowell_Comments_ExportReform_Feb7_2011.pdf
¹⁰ <https://taskandpurpose.com/ammo-expensive-heres-make/>; <https://www.skilledsurvival.com/how-to-make-your-own-ammo/>; <https://www.offthegridnews.com/self-defense/guns-ammo/what-will-i-need-to-make-my-own-ammo/>

¹¹ Small Arms Survey, “Dribs and Drabs,” March 2016. Colby Goodman, “U.S. Firearms Trafficking to Guatemala and Mexico,” Working Paper, Woodrow Wilson Center, April 2013, online at

declare their firearm(s) to a U.S. CBP officer at the port of departure, CBP officers do not conduct a risk assessment similar to what the State or Commerce Department would do to help prevent U.S. firearms from being misused or diverted at the destination point. In addition, if a U.S. person overseas is robbed of or loses a semi-automatic firearm, there is little recourse from the United States. Nefarious actors who are cognizant of this exception could more easily facilitate semi-automatic firearm transfers abroad acting in concert with a U.S. citizen or permanent resident alien.

Not dissimilar from the points mentioned in the section on LVS, it is also troublesome that the BAG exception allows for nonresident aliens leaving the United States to take firearms “accessories,” “attachments,” “components,” “parts,” and ammunition controlled by 0A501 or 0A505. The U.S. government lacks jurisdiction over nonresident aliens while abroad. This exception will increase the number of firearms parts and ammunition that are currently allowed to be transported overseas, many of which are already contributing to epidemic levels of violence in Latin America.¹² In fact, as many as a quarter to half of all guns seized by police in Honduras, Guatemala, and El Salvador and submitted for tracing by the Bureau of Alcohol, Tobacco, Firearms and Explosives have been sourced to the United States.¹³

Recommendation

For these reasons, we believe the proposed BAG provision authorizing license-free exports of semi-automatic rifles by citizens and legal permanent residents be revised to allow the U.S. government to have more oversight before such a license exception is used. In order to allow the U.S. government to review many risky license requests of firearms components around the world, we also encourage you to limit companies use of LVS to \$100 or severally limit the types of parts and components that are available for the \$500 threshold value.

Controls on the Export of Services and 3D Printing

Proposed Change

Under the ITAR, companies must apply for a license with the State Department to export “defense services” to foreign entities. Defense services include items such as providing assistance or training to foreign persons in the design, development, manufacture, production, repair, maintenance, and operation of weapons on the USML. Companies must also request a license if they seek to provide military training to foreign units and forces. However, the Commerce Department’s CCL does not have a similar defense services rule for items moving from the USML to the CCL. Instead, EAR controls are

https://www.wilsoncenter.org/sites/default/files/US%20Firearms%20to%20Guatemala%20and%20Mexico_0.pdf.

¹² New Data Reinforces Link Between Guns, Violence in Latin America, available at

<https://www.insightcrime.org/news/brief/new-data-reinforces-link-guns-violence-latin-america/>.

¹³ American Guns Drive the Migrant Crisis That Trump Wants to Fix With a Wall, available at

<https://www.thetrace.org/2017/05/gun-trafficking-central-america-immigrant-crisis-trump-wall/>.

focused more on technology transfers. Additionally, the new rule would likely mean that the U.S. companies would no longer be prohibited from publishing 3D gun plans on the Internet.

Main Concerns

As the current rule is written, the U.S. government will likely lose oversight on many types of defense services that could pose real risks to U.S. national security interests. Today, U.S. defense companies regularly receive U.S. approval to provide over \$40 billion in defense services a year to over 100 countries.¹⁴ Under the proposed rule, however, U.S. companies may be able provide a wide range of training activities, design and development assistance, testing, and production assistance on firearms and ammunition to foreign persons without sufficient U.S. oversight. In particular, a U.S. company would likely no longer be required to obtain U.S. government approval before they provided training to foreign security forces around the world on how to aim and fire certain guns. Further, when anyone that has access to 3D printing machines is able to obtain plans on how to build a gun, this circumvents U.S. laws that seek to prevent known criminals from obtaining U.S. firearms.

Narrow Definition of Technology: As the proposed rule identifies “the EAR does not include a concept of ‘defense services’ and the ‘technology’ related controls are more narrowly focused and apply in limited contexts as compared to the ITAR.” The technology “required” for the development, production, or operation of semi-automatic firearms would be controlled. But the definition of “required” as applied to “technology” relates only to that portion of “technology” which is “peculiarly responsible for achieving or exceeding the controlled performance levels, characteristics or functions.” Therefore, training a foreign person in the United States or abroad would only require a license if the assistance involved the release of controlled technology. That means companies may be able to provide a wide range of training activities, design and development assistance, testing, and production assistance on firearms and ammunition to foreign persons without sufficient scrutiny and oversight.

Private Security Contractors: As U.S. private security contractors continue to pursue training opportunities with foreign security forces in countries such as Libya and China, it remains critical that the U.S. government maintain oversight of U.S. private security contractor activities.¹⁵ At the moment, a U.S. private security contractor seeking to sell training to foreign police units on how to aim and fire semi-automatic weapon must

¹⁴ Security Assistance Monitor, Arms Sales Database, Direct Commercial Sales Services, accessed on July 6, 2018, online at <http://securityassistance.org/data/country/arms/Direct%20Commercial%20Sales%20Services/2012/2017//Global/all>.

¹⁵ Matthew Cole and Jeremy Scahill, “Eric Prince in the Hot Seat,” The Intercept, March 24, 2016, online at <https://theintercept.com/2016/03/24/blackwater-founder-erik-prince-under-federal-investigation/>. Marc Fisher, Ian Shapira, and Emily Rauhala, “Beyond Eric Prince’s China Venture,” The Washington Post, May 4, 2018, online at https://www.washingtonpost.com/news/world/wp/2018/05/04/feature/a-warrior-goes-to-china-did-erik-prince-cross-a-line/?noredirect=on&utm_term=.15fb0693b992

obtain a license. But, the new rule would likely allow a U.S. company to avoid this license requirement if the company did not also export firearms as part of the training. It also means that some past enforcement actions, such as the deferred prosecution agreement with the private security company formerly known as Blackwater, which included violations related to the export of small arms, ammunition, and training of foreign security forces in Sudan, Iraq, and Afghanistan, could be compromised.¹⁶ The new rule could also create an unfortunate scenario where U.S. private security contractors are able to provide services to foreign security units or militias that are otherwise prohibited from receiving training through U.S. foreign security aid.

3D Printing: In *Defense Distributed v. United States Department of State*, 838 F.3d 451 (5th Cir. 2016), the Fifth Circuit determined that posting 3D gun instructions, which constituted an export of controlled technical data under the ITAR, was not an infringement on the First Amendment. But the proposed BIS rules suggest that information posted on the internet would not be subject to EAR controls. The rules state that “*the EAR includes criteria in part 734 that would exclude certain information and software from control. For example, if a gun manufacturer posts a firearm’s operation and maintenance manual on the internet, making it publicly available to anyone interested in accessing it and without restrictions on further dissemination (i.e., unlimited distribution), the operation and maintenance information included in that published operation and maintenance manual would no longer be “subject to the EAR.” (See §§ 734.3(b) and 734.7(a).)*” If information published online would not be subject to the EAR, then 3D plans for guns published online would be outside the scope of export controls under the proposed rules. We are greatly concerned about the loss of controls on 3D gun-printing plans, which has increasingly assisted bad actors in enhancing their capabilities to inflict atrocities around the world.

Recommendations

We recommend that the final rule expand the definition of “technology” to capture defense-service type activities that would otherwise be left unregulated. More specifically, it will be critical to ensure that a final rule requires U.S. companies to request a license to furnish training on the use of firearms to foreign security forces, support for design and development assistance, testing, and production assistance on firearms and ammunition. To ensure that criminal organizations do not have the capability to easily build firearms, it will be critical that design and development information related to semi-automatic firearms, including 3D printing plans for guns, be considered controlled “technology” under the EAR.

Registration Requirement for Manufacturers

Proposed Change

¹⁶ <https://archives.fbi.gov/archives/charlotte/press-releases/2012/academi-blackwater-charged-and-enters-deferred-prosecution-agreement>

The transfer of certain Category I-III items from the USML to the CCL means that manufacturers and exporters, as well as providers of defense services, of those items will no longer be required to register with the State Department's Directorate of Defense Trade Controls (DDTC) or with any U.S. government entity before engaging in manufacturing or exporting certain firearms, ammunition, and related parts and components. In other words, exporters and manufactures will not longer be subject to the U.S. government requirement under 22 C.F.R. 122.1, which states that *"any person who engages in the United States in the business of manufacturing or exporting or temporarily importing defense articles, or furnishing defense services, is required to register with the DDTC. A manufacturer who does not engage in exporting must nevertheless register."*

Main Concerns

The State Department requirement for companies and individuals to register before they engage in the manufacturing or exporting is an important tool for the U.S. government to better understand the nature of the firearms industry, including who owns and controls key items and technology of significant military value. It provides the U.S. government with valuable data on manufacturers, government contractors, and importers. While some data on exporters will still be available through Commerce Department required export licenses, not all U.S. manufacturers regularly export or are required to submit a license for export. This loss of documented evidence on firearms manufacturing could severely hamper U.S. law enforcement investigations and the prosecution of arms dealers or others found in violation of AECA.

New Types of Manufacturing: In 2016, U.S. registration for firearms manufacturing activities was deemed so important that DDTC issued specific guidance providing that the below broad range of activities constitute "manufacturing" and thus require registration. The below activities were likely added because of concerns about illicit firearms trafficking and an inability to identify some new or uncommon types of manufacturing. However, this new guidance will not apply to Category I-III items moving to the CCL.

- a) Use of any special tooling or equipment upgrading in order to improve the capability of assembled or repaired firearms;
- b) Modifications to a firearm that change round capacity;
- c) The production of firearm parts (including, but not limited to, barrels, stocks, cylinders, breech mechanisms, triggers, silencers, or suppressors);
- d) The systemized production of ammunition, including the automated loading or reloading of ammunition;
- e) The machining or cutting of firearms, e.g., threading of muzzles or muzzle brake installation requiring machining, that results in an enhanced capability;
- f) Rechambering firearms through machining, cutting, or drilling;
- g) Chambering, cutting, or threading barrel blanks; and
- h) Blueprinting firearms by machining the barrel.

Company Acquisition Data: DDTC registrants are required to notify the State Department within five days of the effectuation of a transaction if the registrant is either a target or a buyer in an acquisition. If a foreign buyer is acquiring a DDTC registrant, a notification must be provided to DDTC 60 days prior to the transaction's effectuation. One of the reasons these notifications are critical is to understand who owns and controls manufacturers of items and technology that could be used to harm U.S. foreign policy interests and, in the case of foreign buyers, pre-notification allows the government to take action and ask questions if there are concerns with a non-U.S. company owning a manufacturer or exporter of controlled items.

Recommendation

While some U.S. companies may make the argument that the registration fee (\$2,250 a year for most exporters) is an economic burden, establishing a threshold for annual revenues could easily solve this issue. If a company does not meet this threshold, their registration fee may be waived. If the proposed rules go into effect, we recommend that the U.S. government establish a registration requirement for manufacturers of the items that are transferring from the USML to the CCL, including the 2016 DDTC guidance, in order to provide for the transparency and accountability needed to identify risk and support U.S. law enforcement investigations.

Reporting Requirements on Political Contributions and Fees

Proposed Change

Finally, the transfer of certain Category I, II, and III items from ITAR to EAR control will mean the loss of the reporting requirements outlined in 22 C.F.R. §130. ITAR's Section 130 requires exporters to report payment of certain political contributions, fees, and commissions related to the sale of defense articles and services to the armed forces of a foreign country or international organization to the DDTC. These reporting requirements were implemented to address concerns about the growing use of agents, advisers, and consultants to obtain business in international defense trade.

Section 130.9 mandates that license applicants disclose to the DDTC political contributions in an aggregate of \$5,000 or more and fees or commissions in an aggregate of \$100,000 or more that the applicant or its vendors have paid or agreed to pay related to the sale for which the license is requested. The same disclosure requirements are imposed upon suppliers, which the regulation defines as "any person who enters into a contract with the Department of Defense" for the sale of defense articles or defense services valued in an amount of \$500,000 or more.¹⁷ Section 130.10 requires that applicants and suppliers furnish detailed information related to the sale (such as the total contract price and the name and nationality of each foreign purchaser) and its related political contributions, fees, or commission to the DDTC. Section 130.12 requires vendors to disclose to the applicant or supplier any political contributions, fees, and commissions paid in relation to the sale. Finally, section 130.14 imposes strict recordkeeping

¹⁷ See 22 C.F.R. §130.7.

requirements on each applicant, supplier, and vendor, requiring each to maintain records of any information it furnished or obtained in compliance with Section 130 for at least five years following the date of the report submitted to the DDTC. As the proposed rule will move certain Category I, II, and III items from ITAR control, Section 130 disclosures will no longer be required when obtaining licenses to export those items.

Main Concerns

In many countries around the world, corruption is rampant within their arms procurement systems, as foreign officials seek to steal funds from their national budgets for their personal gain. In Nigeria, this type of corruption helped hollow out the military and made it more difficult for them to effectively combat Boko Haram.¹⁸ In response to similar types of concerns, the U.S. Congress adopted the above reporting requirements to help the U.S. government stop bribery and other fraudulent schemes within the international arms trade. However, this is still a challenging task. According to an earlier Commerce Department report, the United States became aware of "significant allegations of bribery by foreign firms in 294 international contract competitions valued at \$145 billion."¹⁹ Under the proposed rule, the Commerce Department would limit its ability to obtain useful information on U.S. defense companies and prosecute bribery.

Transparency: Section 130 reporting requirements encourage transparency within international defense trade and provide U.S. law enforcement with a useful tool to stop corrupt arms deals. At the moment, Section 130 disclosures are an important information-gathering tool through which the government gains access to useful data about arms trade transactions. Information such as the identities and countries of foreign purchasers and the recipients of donations to foreign governments and campaigns have political and diplomatic uses that extend beyond the arms industry. The loss of required Section 130 disclosures when obtaining licenses to export USML Category I, II, and III items means that the pool of useful data the government can access will become smaller. Just as the access to this data has benefits beyond the arms industry, the decrease in accessible data will have negative repercussions beyond the arms industry.

Prosecutions and Compliance Systems: The requirement that U.S. companies disclose payments made to solicit, promote, or secure the sale of defense articles or services to the armed forces of a foreign country or international organization is an effective anti-bribery and anti-corruption mechanism. The same can be said for the reporting requirements imposed upon suppliers. While U.S. companies may expectedly choose to avoid notifying the U.S. government of fees and contributions that could be considered bribery, U.S. law enforcement have used the provisions to pursue U.S. prosecutions against major defense companies. In 2010, for example, BAE Systems pleaded guilty and paid a \$400 million fine to the United States after being caught in a scandal to cover up, among other items,

¹⁸ Transparency International, "Weaponizing Transparency: Defense Procurement Reform as a Counterterrorism Strategy," May 2017, online at http://ti-defence.org/wp-content/uploads/2017/05/Weaponising_Transparency_Web.pdf.

¹⁹ Paul Holden, "Indefensible: Seven Myths that Sustain the Global Arms Trade," online at <https://projectindefensible.org/>.

payments made to “marketing agents” to help it secure arms contracts with Saudi Arabia. The company failed to disclose any fees paid to the agents.²⁰ The requirement is also a useful tool to encourage U.S. companies to have stronger compliance systems to identify and stop corruption.

Recommendation

In order to maintain important transparency and anti-corruption mechanisms on U.S. firearms sales, the U.S. government would benefit by adding a mechanism to the CCL that would retain the reporting requirement of Part 130.

²⁰ U.S. Department of Justice, “BAE Systems PLC Pleads Guilty and Ordered to Pay \$400 Million Criminal Fine,” March 1, 2010, online at <https://www.justice.gov/opa/pr/bae-systems-plc-pleads-guilty-and-ordered-pay-400-million-criminal-fine>.

General Comment

RE: Comments on Proposed Rule RIN 0694-AF47 -- Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML)

Vista Outdoor Inc., (Vista) is a leading global designer, manufacturer and marketer of consumer products in the growing outdoor sports and recreation markets. We serve these markets through our diverse portfolio of well-recognized brands that provide consumers with a range of performance-driven, high-quality and innovative products, including sporting ammunition and firearms, outdoor products, outdoor cooking solutions, outdoor sports optics, hydration systems, golf rangefinders, and accessories. We serve a broad range of end consumers, including outdoor enthusiasts, hunters and recreational shooters, professional athletes, as well as law enforcement and military professionals.

The majority of Vista brands exported that require BIS or DDTC authorizations are: Federal Premium, CCI, Speer ; Firearms: Savage Arms, Bushnell, BLACKHAWK!, Night Optics, all which will be directly impacted by the proposed rules changes. As requested in the proposed rule contained in Federal Register Notice, 83 FR 24166, May 24, 2018, Vista respectfully submits the following comments in the attached file "Comments on proposed rule RIN 0694AF47."

Sincerely,
Vista Outdoor Inc.

RE: Comments on Proposed Rule – RIN 0694-AF47 -- Control of Firearms, Guns,
Ammunition and Related Articles the President Determines No Longer Warrant
Control Under the United States Munitions List (USML)

Dear Mr. Clagett;

Vista Outdoor Inc., (Vista) is a leading global designer, manufacturer and marketer of consumer products in the growing outdoor sports and recreation markets. We serve these markets through our diverse portfolio of well-recognized brands that provide consumers with a range of performance-driven, high-quality and innovative products, including sporting ammunition and firearms, outdoor products, outdoor cooking solutions, outdoor sports optics, hydration systems, golf rangefinders, and accessories. We serve a broad range of end consumers, including outdoor enthusiasts, hunters and recreational shooters, professional athletes, as well as law enforcement and military professionals.

The majority of Vista brands exported that require BIS or DDTC authorizations are: Federal Premium®, CCI®, Speer®; Firearms: Savage Arms™, Bushnell®, BLACKHAWK!®, Night Optics®, all which will be directly impacted by the proposed rules changes. As requested in the proposed rule contained in Federal Register Notice, 83 FR 24166, May 24, 2018, Vista respectfully submits the following comments:

Specific Comments

I. ECCN 0A501 – Firearms (except 0A502 shotguns) and related commodities as follows (See List of Items controlled)

A. Note 1 to 0A501 – Rationalize Controls Over Antique Firearms and Muzzle Loading Black Powder Firearms

The proposed note states, “Antique firearms (i.e. those manufactured before 1890) and reproductions thereof, muzzle loading black powder firearms except those designs based on centerfire weapons of a post 1937 design, BB guns, pellet rifles, paint ball and all other air rifles are EAR99 commodities.”

I. Antique Firearms

The Note defines antique firearms as “those manufactured before 1890 and reproductions thereof.” Under the current ITAR, antique firearms are controlled under USML Category I(a), however license exemption 22 CFR § 123.17(b) allows exports of “firearms covered by Category I(a) if manufactured on or **before 1898**, or replicas.” BIS’s proposed rule will require licensing of various antique rifles that are currently exported under an exemption.

Comment: We request BIS change the date in the definition of antique firearm in Note 1 from 1890 to 1898 to be consistent with the ITAR exemption.

II. 0A502 Shotguns; complete trigger mechanisms; magazines and magazine extension tubes; complete breech mechanisms; except equipment used exclusively to treat or tranquilize animals, and except arms designed solely for signal, flare, or saluting use.

A. License Exception LVS

ECCN 0A502 does not include any list-based license exceptions. The export of, for example, 0A501 trigger or magazine would be eligible for License Exception LVS but the export of a 0A502 trigger or magazine would not. Currently the proposed rule would control low-value parts and components in 0A502 that would be eligible for LVS exports under 0A501.

Comment: To provide consistent controls and exceptions for like items please allow License Exception LVS for 0A502 parts and components proposed for 0A501 for the same types of items, such as shotgun trigger mechanisms, magazines, and magazine extensions.

Suggested modifications:

- i. Change the ECCN heading to “Shotguns and related commodities as follows (See List of Items controlled), except equipment used exclusively to treat or tranquilize animals, and except arms designed solely for signal, flare, or saluting use.”
- ii. Include in the List of Items Controlled new subparagraphs to separately list breech mechanisms, and the remaining components (e.g., “including complete trigger mechanisms; magazines and magazine extension tubes”) with a corresponding Reason for Control which allows for use of exception LVS to the same extent as proposed for 0A501.

III. 0A504 Optical sighting devices for firearms (including shotguns controlled by 0A502); and “components” as follows (see List of Items Controlled)

A. Make License Exception LVS Available for 0A504.g Items

The proposed 0A504.g (“Lenses, other optical elements and adjustment mechanisms”) does not allow for the use of License Exception LVS.

Comment: to align the availability of the exception for similarly significant items on 0A501, Vista requests that License Exception LVS be available for 0A504.g components (e.g. optical sighting device knobs), which are insignificant relative to the other items in 0A501.

IV. 0A505 Ammunition as follows (see List of Items Controlled)

A. Remove 0A018 and Transfer Controls to 0A505

As detailed in the background section of the proposed rules, BIS provides that all firearms, ammunition and related commodities will be consolidated into a new 500 or 600 series of entries and other similar items would be consolidated to the same areas on the CCL, in order to easily identify items for the exporter. Retaining 0A018 would be counter intuitive to what the essence and spirit of consolidating the like items to the same area.

Comment: We request that all commercial firearm, ammunition, and related items be in one of the series of new 500 series ECCNs (specifically the 0A505) and not left in the -018 area

B. Allow for Use of License Exception LVS

Proposed ECCN 0A505 includes license exception LVS of \$100 for subparagraph .x “parts” and “components.” The LVS exception is limited to \$100 net value per shipment related to the parts and components of ammunition listed on the CCL.

Comment: Vista requests the value of the LVS exception as it related to ammunition parts and components be raised to \$500 to match that allowed for firearm components.

V. Part 758 Export Clearance Requirements

A. Delete Proposed AES Reporting Requirements

New paragraph 758.1(g)(4) (“Exports of Firearms and Related Items”) states that “For any export of items controlled under ECCNs 0A501.a or .b, or shotguns with a barrel length less than 18 inches controlled under ECCN 0A502, in addition to any other required data for the associated EEI filing, **you must report the manufacturer, model number, caliber and serial number of the exported items.**” The explanation for the change states this is “to expand the data elements required as part of an AES filing.”

While we do understand the concern and requirement to verify firearms are exported under the correct authorization this proposed rule would be an undue burden on Vista and our U.S. industry competitors, there are already numerous mechanisms and assessment programs in place with other regulatory agencies that monitor the export of firearms, a requirement such as this would not be consistent with prior control.

Comment: We strongly request that BIS delete the new requirement for reporting the manufacturer, model number, caliber and serial number of the exported items in the AES system.

VI. Recommendation for Effective Date of Final Rule

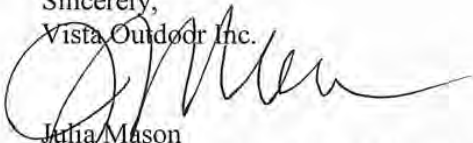

Throughout the reform effort and during transitions of items from the USML to the CCL, the final rules for other categories had an effective date of 180 days after publication.

Comment: Vista recommends a 180-day effective date for the final rule.

Thank you for the consideration and opportunity to provide comments to the proposed rules. Vista commends the joint effort among the Bureau of Industry and Security, Directorate of Defense Trade Controls, and other reviewing agencies in this endeavor and we look forward to the final rules being released.

Vista would be happy to respond to any questions or concerns, or provide additional information, please contact Julia Mason via phone (571) 343-7005 or via email at itoshootingsports@vistaoutdoor.com.

Sincerely,
Vista Outdoor Inc.

Comments re: ITAR Amendment - Categories I II, and III; EAR Amendment - RIN 0694-AF47

Jeff Abramson

July 9, 2018

I have worked in the nonprofit sector for more than a decade in efforts to promote more responsible trade in conventional weapons and find these proposed regulatory changes to be irresponsible and dangerous. They continue the wrong-minded approach of the Trump administration to treat weapons as any other trade commodity, threatening to undermine long-term global security and true U.S. national security interests. While my comments below are as an individual concerned U.S. citizen, they are informed by my work as a senior fellow at the Arms Control Association, coordinator of a global network of professionals engaged on these issues –the Forum on the Arms Trade--, and former leader within the international Control Arms campaign that championed the creation and now implementation of the Arms Trade Treaty.

In addition to these comments, I commend to reviewers the comments by experts listed by the Forum on the Arms Trade, including: Colby Goodman, William Hartung, Christina Arabia; Adotei Akwei (on behalf of Amnesty International USA); and John Lindsay-Poland, which delve into many of these points in much greater detail.

Specific concerns include:

Loss of Congressional oversight

In 2002 Congress amended its notification threshold so that it would be informed of potential commercial sales of firearms under USML category I when they were valued at just \$1 million, as opposed to \$14 million for other major weapons sales. Such notifications have been instrumental in forestalling unwise sales, including last year to Turkey and the Philippines. No similar statutory requirement of congressional notification exists for most arms sales under the CCL, meaning Congress would lose its oversight role on these weapons.

Public reporting should be improved, not weakened

The public gains some insight into the transfer of weapons via Congressional notifications, and also through the State Department's 655 report and Blue Lantern investigations report. Those reports could provide much more detail, such as the number of specific weapons involved and other data, rather than broad categorical details (655 report). Commerce reporting provides even less data, with similar reports covering around 20 countries per year. We deserve better transparency, not worse. If this transfer of authority moves forward, the Commerce department should be required to improve its reporting.

Non-sensical to no longer consider these military weapons/defense articles

The transfer of regulatory authority to the Commerce Department is claimed to be wise because these weapons no longer "provide the United States with a critical military or intelligence advantage or, in the case of weapons, are inherently for military end use," and further because many "are widely available in retail outlets in the United States and abroad."

Applying this general approach--taken from the larger export reform initiation--falls apart when we are looking at firearms and their ammunition. These weapons are and should be controlled because a

significant amount of violence that occurs, including against U.S. military and law enforcement personnel, is inflicted by small arms. Research indicates that the types of weapons being transferred to Commerce control—AR-15s and AK-47 style assault rifles and their ammunition—are “weapons of choice” of drug trafficking organizations in Mexico and other Latin American countries. Many can also be easily converted to fully automatic weapons, which will remain under USML control. U.S. military members often operate their fully-automatic-capable weapons in a semi-automatic or less-than-automatic mode. Plus, many sniper rifles to be moved to Commerce control are in U.S. military use.

In addition, in many of the countries where these weapons are likely to be marketed, they are considered military weapons and tightly controlled. As currently proposed, they would also remain on the US Munitions Import List (USMIL), which is proper. Why they would therefore not remain on a similar export list is illogical.

Being commercially available in the United States is not a good indicator of whether these weapons merit the oversight of the State Department, which is better tasked with weighing non-commercial concerns. Nor is it proper to consider these weapons somehow safer than others on the USML.

Upsetting norms on human rights as relates to the arms trade

The United States maintains strong laws against the provision of arms where certain human rights abuses are of concern (even if we do not always live up to those laws). Some of those laws may not apply to items in the 500 series. And although the State Department will be consulted in licensing decisions, it is difficult to see how this new approach would strengthen the ability of DRL and others concerned about human rights to forcefully insert human rights into arms sales decisions.

At a time where the global community must make the arms trade more responsible, these proposed changes would make its largest arms dealer, the United States, appear less responsible and less concerned about the human rights implications of the arms trade.

Making 3-D printing easier is dangerous

It is unfathomable how allowing untraceable 3-D printing of firearms serves U.S.-recognized goals to combat illicit trafficking of firearms. Our country has agreed to support the Program of Action (PoA) on small arms and light weapons and the International Tracing Instrument (ITI), has signed accords on arms transfers and tracing in the Americas, and argued for why these efforts are so important. The United States also is the world’s largest donor, as I understand it, to helping countries build their ability to trace weapons, secure weapons stockpiles, and to destroy those stocks when warranted. Yet, this transfer of authority to Commerce appears to open the door to unfettered 3D printing, which threatens to undermine nearly all those efforts.

Overall

At a fundamental level, U.S. arms are not like any other commodity and should not be treated as such. These are first and foremost killing machines. The over-emphasis on economic security threatens to jeopardize higher priorities, including peace and security concerns. If more weapons flow to countries with poor human rights records, norms around responsible weapons use and transfer will be harder to build and uphold.

Re: Safari Club International Comments on Proposed Amendment to the International Traffic in Arms Regulations: Revision of U.S. Munitions List Categories, I, II and III, Docket RIN 1400 AE30, DOS-2017-0046; and Proposed Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML), RIN 0694-AF47, Docket No. 111227796-5786-01.

Dear Sirs:

Safari Club International (SCI) submits these comments in support of the U.S. Department of State's proposed amendments to the International Traffic in Arms Regulations (ITAR) to revise Categories I, II, and III of the U.S. Munitions List (USML) to describe more precisely the articles warranting export and temporary import control on the USML. SCI also supports the Department of Commerce, Bureau of Industry and Security's proposed determination that these items no longer warrant control under the U.S. Munitions List (collectively referred to as "proposed regulations").

SCI does not support the proposed regulations' finalization and implementation of a modified procedure for the temporary export of firearms and ammunition by individuals who wish to travel outside the U.S. for recreational hunting and shooting purposes. The procedure requires travelers to use the Automated Export System (AES) to register their personal firearms and ammunition. This is an inappropriate and unworkable system for the individual who wishes to temporarily export his/her firearms. As an alternative, SCI requests that the proposed regulations be modified so that they delete the AES registration requirement and formalize and codify the Form 4457 process to ensure its consistency and use by all Customs and Border Protection (CBP) officials.

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 2 of 6

Safari Club International

Safari Club International, a nonprofit IRC § 501(c)(4) corporation, has approximately 50,000 members worldwide, many of whom are U.S. residents who travel with their firearms for hunting and recreational shooting around the world. They are individuals, not businesses, who seek only to bring their own property with them when they travel and return to the U.S. with that same property. Their activities are legal and are regulated by the countries they visit to hunt and shoot.

The Origin of the AES Registration Requirement

The export of firearms is controlled under the ITAR, which is administered by the U.S. Department of State, Directorate of Defense Trade Controls (DDTC). ITAR regulations have historically included an exemption under 22 CFR §123.17(c) allowing U.S. persons to temporarily export without a license up to three nonautomatic firearms and not more than 1,000 cartridges. This exemption is widely used by hunters and other sportsmen, who travel overseas with firearms to be used for sporting and other legal purposes. To use the exemption, the U.S. person must declare the firearms and/or ammunition to CBP, carry the firearms as part of their baggage, and not transfer ownership while abroad.

In 2011, DDTC published a Federal Register notice of proposed rulemaking that principally revised the exemption related to personal protective equipment, but also included a requirement that those traveling with firearms register through the Automated Export System (AES): “The person. . . presents the Internal Transaction Number from submission of the Electronic Export Information in the Automated Export System per §123.22 of this subchapter....” 76 Fed. Reg. 16353, 163534 (Mar. 23, 2011).

The system required those registering to provide an Employer Identification Number (EIN), available only to commercial enterprises. The registration system also involved procedures far too complicated and burdensome than necessary for individuals seeking only to travel with their personal equipment. Because the registration system imposed registration obligations that would have forced hunters and shooters to make false representations to the Internal Revenue Service, jeopardized their ability to obtain permits to import the wildlife they successfully hunted, and imposed burdensome obligations unnecessary and inappropriate for non-commercial importers, CBP agreed to postpone the implementation of the registration requirements and to continue the use of Form 4457 as the mechanism to facilitate temporary firearms export. Even that solution presented problems. Due to the inconsistencies in the way that CBP personnel issued the forms, U.S. residents have encountered difficulties in taking their firearms to foreign countries (e.g. South Africa) that attribute much greater significance to Form 4457 than does the U.S.

Collection of Data Through AES Registration is Inappropriate

Without good reason, the proposed regulations would reactive the AES registration requirement for individuals seeking to temporarily export their firearms and ammunition.

Consistent with the ITAR requirements previously applicable to temporary exports of the firearms and associated ammunition covered by this rule, [Bureau

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 3 of 6

of Industry and Security (“BIS”)] is proposing to modify § 758.1 of the EAR to make clear that exporters would continue to be required to file Electronic Export Enforcement (EEI) to the Automated Export System (AES) for transactions involving such firearms and associated ammunition that are otherwise authorized pursuant to License Exception BAG.

83 Fed. Reg. 24174. The purpose of the registration system is not to facilitate the temporary export and reimport of firearms and ammunition. According to CBP, the collection of export data through the registration is designed to help with the “compilation of the U.S. position on merchandise trade” and is an “essential component of the monthly totals provided in the U.S. International Trade in Goods and Services (FT900) press release, a principal economic indicator and a primary component of the Gross Domestic Product.” <https://www.census.gov/foreign-trade/aes/aesdirect/AESDirect-User-Guide.pdf>

The government has no need to collect this data. The data, provided by individuals who wish to temporarily export and then re-import the same personally owned equipment, has nothing to do with the “U.S. position on merchandise trade” or the “Gross Domestic Product.”

The only purpose for the collection of data from individual hunters who travel with their firearms is likely to enable the government to maintain records on these individuals and their legal activities abroad. In the proposed regulations, the BIS acknowledges that the intention of the AES filing system was to “track such temporary exports of personally-owned firearms and ammunition.” SCI strongly opposes this attempt to “follow” and retain records of the individuals who travel with their firearms for hunting purposes. These individuals have taken no actions meriting the government’s desire or need to collect and maintain data on their activities. The government should remove the requirement to collect such data.

The Proposed Regulations Recognize Flaws in the Registration System

The proposed regulations provide the public with the opportunity to comment on whether CBP has been able to remedy the problems identified when CBP first attempted to activate and implement the new requirement. The drafters also condition the reactivation of the AES registration requirement on CBP’s success in remedying the problems that plagued the introduction:

Whether and how BIS includes this requirement in a final rule would be based on whether CBP is able to update its processes, and other agencies as needed, to allow for individuals to easily file EEI in AES by the time a final rule is published. If CBP is not able to do so, then the final rule may direct exporters to continue to use CBP’s existing process, which is the use of the CBP Certification of Registration Form 4457, until a workable solution is developed or CBP suggests an alternative simplified solution for gathering such information for temporary exports of personally-owned firearms and ammunition. BIS will also take into consideration any public comments submitted on this aspect of the proposed rule regarding imposing an EEI filing requirement in AES, as well as

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 4 of 6

comments on the current practice of using the CBP Form 4457, as well as any other suggestions on alternative approaches for tracking such information.

83 Fed. Reg. 24174. AES registration should not be required as CBP has not remedied the problems that plagued the initial attempted implementation of the system.

The AES Registration System Requires Individuals to Provide False Information to the Internal Revenue Service

The AES registration system continues to require persons temporarily exporting firearms or ammunition to present “the Internal Transaction Number from submission of the Electronic Export Information in the Automated Export System.” The AES system requires an EIN before a user can submit any data. The Census Bureau administers the AES system, and their website still includes the following FAQ:

The Internal Revenue Service (IRS) site states that an Employer Identification Number (EIN) is for use in connection with business activity only. It further states, do not use your EIN in place of a Social Security Number. The information provided by the Census Bureau and the IRS is conflicting.

The IRS publication titled “Understanding Your EIN” which is located on their webpage (<http://www.irs.gov/pub/irs-pdf/p1635.pdf> [external link]) states that “...Employer Identification Number (EIN) is for use in connection with business activity only, do not use your EIN in place of a Social Security Number”.... However, for the purposes of registering or filing in the AES you can and should use your EIN. While it is not specifically stated, an EIN can be obtained for government reporting purposes when a person does not own a business.”

<https://www.census.gov/foreign-trade/regulations/ssnfaqs.html>. The Census Bureau site expressly tells individual exporters to ignore the IRS’s instructions and to misrepresent themselves as businesses, in order to obtain an EIN. The IRS site contains no instructions providing such an exception.

The Census guidelines instruct individuals to select “Sole Proprietorship” as the “type of legal structure applying for an EIN,” which is explained by IRS as: “sole proprietor includes individuals who are in business for themselves, or household employers.” The individual is further required to select “started a new business” as the reason why the sole proprietor is requesting an EIN. For an individual seeking to travel overseas with their firearms, this information is confusing, false and entered only to obtain the EIN.

As nothing has changed to remedy this problem since the AES registration requirement was originally imposed, the regulations should not include this requirement.

The AES Registration System is Designed for Commercial Operations and Is Overly Complicated for the Individual Exporter

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 5 of 6

Despite the years that have passed since CBP's attempt to require individuals to register through the AES system for the temporary export of their firearms, the agency has not made meaningful progress in reducing the overly complicated process for registration. The system is designed for businesses whose repeated use of the system merits the time and patience required for registration. The online AES Direct Users' Guide (which contains no reference to individuals, temporary export, or firearms) is a 39-page manual that an individual would be required to learn in order to register with the system. The registration mechanism is unnecessarily burdensome and complicated for the private individual who does not wish to participate in commercial trade but merely wants to temporarily take his own firearm with him outside the U.S. for a recreational hunt or shoot.

Individuals Identifying Themselves as a Commercial Enterprise Could Jeopardize Their Ability to Import Legally Hunted Animals

The requirement that individual hunters obtain an EIN, recognized by the IRS for business purposes only, could potentially jeopardize the ability of hunters to import some sport-hunted trophies from abroad. The U.S. Fish and Wildlife Service (FWS) prohibits the importation of many sport-hunted species for commercial purposes. A hunter who registers as a business for the purpose of leaving the country and exporting the firearms he plans to use to hunt outside the United States, risks the FWS prohibiting the hunter from importing his trophies and otherwise penalizing the hunter.

The AES Registration System Does Not Replace the Use of Form 4457

As mentioned above, the proposed regulations did not intend the AES registration requirement to replace CBP Form 4457 for the temporary export and reimport of personally owned firearms. Even with the AES registration requirement, temporary exporters of firearms and ammunition will still need to obtain and complete Form 4457 and display it upon re-entry into the U.S. to prove that they did not acquire the firearms abroad. Because (1) the AES registration requirement and its purpose of tracking the activities of law-abiding hunters and recreational shooters are neither necessary nor appropriate for the temporary export activities of hunters and shooters, and (2) these individuals will continue to need to obtain and display Form 4457, the logical solution would be to abandon the AES registration requirement, retain the Form 4457 practice, and improve the mechanisms for issuing the latter.

Future Use of Form 4457 Needs to Reflect the Greater Significance of the Document Outside the U.S.

While CBP has used Form 4457 as primarily a mechanism for determining whether the firearm being imported into the U.S. is the same property the individual exported when he or she left the country, other governments attribute greater significance to the document.

South Africa, for example, treats the form as a pseudo license of a U.S. resident traveling with a firearm. South African police have conditioned import of firearms into their country on the U.S. resident's possession of what South Africa considers to be a valid Form 4457. In 2017, this led

SCI Comments on Proposed Regulations Regarding Temporary Export of Firearms
July 9, 2018
Page 6 of 6

to problems for hunters traveling to South Africa when the CBP began issuing Form 4457s with already expired expiration dates. Although CBP explained that the agency attributes little meaning to the form's expiration date, South African officials considered the forms expired and prohibited hunters from entering the country with their firearms due to the apparent expired appearance of the forms.

The problem was exacerbated by different offices of CBP issuing different versions of the form, which also did not match the form available from CBP's website. After representatives of SCI and other organizations engaged in numerous discussions on the issue with CBP personnel, CBP adopted a temporary solution of issuing new forms with a future expiration date. CBP needs to adopt a more permanent solution that addresses the significance of the form in other countries, such as issuing forms without any expiration date.

SCI's Recommended Resolution and Revision of the Proposed Rules

SCI recommends that the drafters delete the AES registration requirement entirely for individuals and make it clear that registration is not required for those who wish to temporarily export their firearms from the United States. No tracking of the legal activities of these hunters and shooters should be conducted and no compilation of data about these individuals should be permitted. Instead, the drafters should formally codify the use of Form 4457 for individuals and should identify a single consistent standard for the form that contains no date that could be interpreted or misinterpreted by anyone as an expiration date.

Thank you for the opportunity to comment on these proposed regulations, and in particular to advocate for the removal of a process that should not be applied to individuals who wish only to temporarily export their firearms in order to engage in legal activities outside of the United States. If you have any questions or need anything further, please contact Anna Seidman, Director of Legal Advocacy Resources and International Affairs, aseidman@safariclub.org.

Sincerely,

Paul Babaz

RE: Docket Nos. DOS-2017-0046, BIS-2017-0004

ITAR Amendment -- Categories I, II, and III and Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control under the United States Munitions List (USML)

This comment is submitted on behalf of Giffords and Giffords Law Center ("Giffords") in response to the Proposed Rules published by the Departments of State and Commerce on May 24, 2018 regarding the classification and administration of exports of certain firearms and ammunition. The Proposed Rules are complex and would represent a dramatic change in the regulatory structure governing firearm exports. We are concerned that the Proposed Rules may not adequately address our national security, foreign policy, international crime, or terrorism threats. In sum, we are concerned about potential loss of life. We also believe the Proposed Rules do not adequately address the need for transparency so Congress and the public may understand the impact of these Rules on potential weapons exports.

Giffords is committed to advancing common-sense change that makes communities safer from gun violence. Operating out of offices in San Francisco, New York, and Washington, DC, our staff partners with lawmakers and advocates at the federal, state, and local levels to craft and enact lifesaving gun safety laws, participate in critical gun-violence-prevention litigation, and educate the public on the proven solutions that reduce gun violence.

THE PROPOSED RULES APPEAR DRIVEN BY THE INTERESTS OF THE GUN INDUSTRY

Even the National Rifle Association (NRA) admits that the Proposed Rules were drafted with "the goal of increasing U.S. manufacturers' and businesses' worldwide competitiveness." These Rules are "designed to enhance the competitiveness of American companies in the firearms and ammunition sectors," allowing firearms and ammunition "to be subject to a more business-friendly regulatory climate."¹

We are concerned that the Proposed Rules elevate the desire of American gun manufacturers to compete with international arms dealers over the danger that exported firearms will contribute to international gun crime and violence. The United States must not prioritize gun industry profits over human lives.

THE PROPOSED RULES WILL DRAMATICALLY CHANGE THE LAW, RISKING NEW LOOPHOLES

We are concerned that the Proposed Rules, by shifting firearms and ammunition from the United States Munitions List (USML) to the Commerce Control List (CCL), would weaken oversight over exports of these items. As even the NRA has acknowledged, "items on the USML controlled under ITAR are generally treated more strictly," whereas regulation under the CCL "is more flexible." The NRA has also admitted that license applications for items on the USML are subject to "more stringent vetting" than items on the CCL.²

The Departments of State and Commerce, in drafting the Proposed Rules, have made some efforts to ensure that exports of firearms and ammunition will still be subject to oversight. But the dramatic nature of the proposed changes, and the complexity of the Proposed Rules raise serious concerns about hidden loopholes. Some areas of potential concern include:

- Congressional notification and the methods for Congress to disapprove of proposed firearm exports;
- The extent to which the Commerce Department monitors the end-users of its products; and the extent to which Congress and the public have access to information about the results of this monitoring;
- The online posting of designs for the production of firearms, and their use in the 3D printing of untraceable firearms;
- Firearms training provided to foreign security forces;
- The reporting of political contributions by gun exporters and related entities;
- The Commerce Department's bandwidth to properly oversee these exports; and
- The regulation of brokers who act as middlemen in firearms transactions, and the threat that firearms will be diverted by these middlemen to violent ends.

¹ National Rifle Association, *Trump Administration's Proposed Rulemakings a Win-Win for America's Firearms Industry*, *National Security*, <https://www.nra.org/articles/20180525/trump-administration-s-proposed-rulemakings-a-win-win-for-americas-firearms-industry-national-security>

² *Ibid.*

According to the State Department's Proposed Rules, "The Department of Commerce estimates that 4,000 of the 10,000 licenses that were required by the [State] Department will be eligible for license exceptions or otherwise not require a separate license under the EAR." This statement seems to directly contradict the statement in the Commerce Department's Proposed Rules that "BIS would require licenses to export, or reexport to any country a firearm or other weapon currently on the USML that would be added to the CCL by the proposed rule." The Commerce Department later clarifies, "The other 4,000 applicants may use license exceptions under the EAR or the "no license required" designation, so these applicants would not be required to submit license applications under the EAR." While we recognize that other forms of oversight may be available, this dramatic difference in the number of licenses raises our concern.

We are also particularly concerned that these changes will result in an increase in the number of untraceable firearms in circulation. As 3D printing technology becomes more widely available, the likelihood that it may be used to construct operable firearms that are exempt from serialization requirements increases. Under current law, the proliferation of 3D printed firearms is held in check by the Fifth Circuit's decision in *Defense Distributed v. U.S. Dep't of State*,³ which upheld the State Department's decision that the posting of online data for the 3D printing of firearms fell within the USML. The Proposed Rules would throw that determination into question.

Inadequate gun safety laws cost human lives. When gun purchasers are not properly vetted and laws against gun trafficking are not properly enforced, guns often fall into the wrong hands and are used to perpetrate horrendous crimes and violence. The U.S. experiences this loss of life on a daily basis, with over 90 people killed each day. We do not wish to see a similar effect on an international level from the weakening of our laws regarding gun exports.

THIS CHANGE LACKS SUFFICIENT CONGRESSIONAL NOTIFICATION REQUIREMENTS

We have not seen anything in the Proposed Rules that would continue Congressional notification requirements for any of the Category I firearms that are being moved to the CCL. There are several types of sales controlled under the Arms Export Control Act that require Congressional notification. Under current law, a certification must be provided to Congress prior to the granting of any license or other approval for transactions involving the export of a firearm controlled under Category I of the USML in an amount of \$1 million or more.⁴ Congress then has the ability to enact a joint resolution prohibiting the export, which would prevent the State Department from licensing the sale. Congress generally is given 15 days or 30 days to review the transaction before a license can be granted, depending on the items being exported and the

³ 838 F.3d 451 (5th Cir. 2016).

⁴ See 22 U.S.C. § 2776, 22 C.F.R. 123.15(a)(3).

country to which it is being exported. While there are Congressional notification requirements for certain products that are controlled under the CCL, it seems that such notification requirements would not be as broad that as under the USML.

Congress should continue to receive advance notification of transactions involving firearms and to have the opportunity to prohibit these exports when appropriate. The Proposed Rules should be strengthened to protect Congress's authority in this area.

THE CHANGE MAY RESULT IN LESS TRANSPARENT END-USE MONITORING

We are concerned about a possible reduction in the monitoring of the end-users of exported firearms and publicly available information about this monitoring. The State Department currently monitors the end-users of firearm exports through its Blue Lantern program. Public reporting of Blue Lantern information is mandatory⁵ and there are readily available statistics about the results. While the Commerce Department also conducts end use monitoring, there does not appear to be as fulsome a public reporting requirement for these end use checks as under the Blue Lantern program.

The Proposed Rules do not discuss end use monitoring of the items being moved to the CCL. It is reasonable to assume that these items will fall under the general Bureau of Industry and Security end use check program. This end use check program is not as well-publicized or as formal as the Blue Lantern program, and only a very small percentage of exported items are reviewed. If the Proposed Rules move forward, this program must be strengthened to address the need to monitor the end-users of exported firearms and provide the public with information about the results.

THIS CHANGE IGNORES THE MILITARY NATURE OF MANY FIREARMS

The Proposed Rules are based on an assumption that automatic firearms are designed for and used by the military, and semiautomatic firearms are not "inherently military." This is inaccurate. Consequently, we question the President's determination that semiautomatic firearms and ammunition no longer warrant control under the USML.

In fact, members of the U.S. armed forces routinely use firearms in semiautomatic mode in combat conditions, and the designs of many semiautomatic firearms are inherently military. Assault rifles like the AR-15 were originally designed for military use. Earlier models included a selective fire option that allowed service members to switch easily between automatic and semiautomatic modes. The military included the option to fire in semiautomatic mode because military combat sometimes requires use of a firearm in

⁵ 22 U.S.C. §§ 2785, 2394, 2394-1a

semiautomatic mode. Shooting in semiautomatic mode is more accurate and hence more lethal.⁶ In fact, some members of the military use the semiautomatic mode exclusively.

The fact that some gun enthusiasts “enjoy” shooting these weapons and have labeled this activity “modern sport shooting” or “tactical shooting” does not change the design or purpose of these firearms or the danger they pose in civilian hands. The horrendous rise in mass shootings our country has suffered and the frequency with which these firearms are used in these shootings testify to this danger.

Military-style semiautomatic firearms were used to perpetrate the tragedies that occurred in an elementary school in Newtown, Connecticut, at a music festival in Las Vegas, Nevada, at a workplace in San Bernardino, California, in a movie theatre in Aurora, Colorado, and at a high school in Parkland, Florida, among others. Because of the dangerous nature of these weapons, D.C. and seven states, including the populous states of California and New York, ban them.⁷ Because of the military nature and serious lethality of these weapons; they belong on the USML.

THERE ARE ALTERNATIVES TO THE PROPOSED RULES THAT HAVE NOT BEEN EXPLORED

The real concern that seems to be driving this significant change in the way the U.S. government regulates firearms exports is that firearms and ammunition manufacturers are currently required to register with the State Department and pay a registration fee. According to the NRA, “Any business that manufactures an item on the USML, or even just a part or component of such an item, also has to register with the State Department and pay an annual fee, which is currently set at \$2,250. This registration is required even if the manufacturer has no intent to ever export the items. ... Manufacturers of items on the CCL, or their parts or components, do not have to pay an annual registration fee to the Commerce Department.”⁸

The registration fee appears to be the NRA’s primary concern with the current system for regulating the export of firearms and ammunition. The simple solution to this problem might be to waive the fee for manufacturers who do not, in reality, export these items. Waiving the fee would relieve industry of this “burden” without undoing the important policy choices made by the State Department in the regulation of these exports or requiring the Commerce Department to “reinvent the wheel” with respect to these regulations. While we would not necessarily support this proposal (it might shift the costs of manufacturer

General Comment

To Whom It May Concern,

I am writing to strongly oppose Pres. Trump's May 24, 2018 proposal of a new rule that would move the oversight of the export of firearms from the US State Dept to the US Commerce Dept. This is a matter of national security and appropriately is the role of the US State Dept. While this move might raise more money for particular businesses, it would increase the threat of international crime and terrorist crimes. I further oppose the loosening of regulations that keep Americans safe and prevent guns getting into the hands of terrorists.

Respectfully submitted,

Jeannine Coyne

ATTN: Mr. Richard E. Ashooh
Assistant Secretary for Export Administration

SUBJECT: RIN 0694-AF47, Request for Comments Regarding Control of Firearms, Guns, Ammunition and Related Articles the President Determines No longer Warrant Control Under the United States Munitions List.

Dear Mr. Ashooh:

Northrop Grumman Corporation wishes to thank the Department of Commerce (DOC) for the opportunity to submit comments in review of the Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML). In response, we provide the following recommendations:

General: We recommend the DOC define “firearm” in harmonization with the USML.

EAR §740.11 – Governments, international organizations, international inspections, under the Chemical Weapons Convention, and the International Space Station (GOV):

Note 2 to paragraph (b)(2) – the phrase “or other sensitive end-users” is vague and ambiguous. We recommend deletion or enumeration of specific types of entities ineligible for the exception.

EAR §740.14 – Baggage (BAG):

§740.14(c)(1) – Recommend revising to say “Owned by, or for the exclusive use of, the individuals (or by members of their immediate families) or by crew members of exporting carriers on the dates they depart from the United States;”

- EAR §740.1(c)(1) “Limits on eligibility” currently states that the items must be “owned by” the individuals. The criteria currently in the exemption located in ITAR §123.17(c)(3) is related to the person’s “exclusive use,” so we recommend revising the language in EAR §740.14(c)(1) so the exception may not be interpreted as being more restrictive than the current ITAR exemption criteria.

ECCN 0A501:

To avoid redundancy and duplication, we recommend revising the LVS entry as follows: “LVS: \$500 for 0A501.c, .d, and .x, \$500 for 0A501.e if the ultimate destination is Canada.”

Paragraph 0A501.x: As currently proposed, paragraph .x would apply to parts, components, accessories, and attachments specifically designed for a commodity classified anywhere on the USML. We recommend revising as follows:

“Parts” and “components” that are “specially designed” for a commodity classified under paragraphs .a through .c of this entry or USML Category I and not elsewhere specified on the USML or CCL.

ECCN 0A502: Rather than having the items controlled contained in the ECCN heading, we recommend enumerating separate sub paragraphs for the different reasons for control for size for the different size shotguns. Breaking down to this lower level will allow companies to record much easier the classification in an automated system and apply proper controls without having to continually reference back to technical data or notes.

- .a Shotguns with a barrel length less than 18 inches
- .b Shotguns with a barrel length 18 inches to less than 24 inches
- .c Shotguns with a barrel length greater than or equal to 24 inches
- .d Complete trigger mechanisms; magazines and magazine extension tubes; complete breech mechanisms;

Note: this entry does not control equipment used exclusively to treat or tranquilize animals, and arms designed solely for signal, flare, or saluting use

ECCN 0A505:

Paragraph 0A505.a: Recommend revising paragraph .a to include ammunition for firearms controlled in USML Category I that may not otherwise be captured, as follows:

Ammunition for firearms controlled by ECCN 0A501 or USML Category I and not enumerated in paragraph .b, .c, or .d of this entry or in USML Category III.

Paragraph 0A505.d: Recommend adding clarifying language to this paragraph on whether it also controls “dummy rounds” for medium caliber firearms as it only references “blank ammunition” for small caliber firearms. If this is not intended to control inert dummy ammunition please clarify this category to include that.

0A505 Related Controls: Recommend deleting “combat shotguns.” The proposed revision to USML Category I only covers fully automatic shotguns, which is already referenced in the “Related Controls” section.

ECCN 0B602: Recommend adding clarifying language on examples of specific tooling that have been included in the transfer from the Department of State to the Department of Commerce or, clarifying this in the final rule. For example, provide clarification by including a note stating that this includes boresights and units made specifically for testing purposes.

Administrative: We recommend adopting a delayed effective date of 180 days for rules revising entire categories of the USML and moving items to the CCL.

Should clarification or subsequent technical discussions be necessary, please contact either Steve Headley at james.headley@ngc.com, (703-280-4806), or myself at thomas.p.donovan@ngc.com (703-280-4045).

Sincerely,

Thomas P. Donovan

RE: RIN 0694-AF47 (Commerce) and RIN 1400-AE30 (State)

Dear Mr. Ross and Mr. Pompeo,

Trinity Health values the opportunity to comment on the proposed rules to address the Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML). Trinity Health is one of the largest multi-institutional Catholic health care delivery systems in the nation, serving diverse communities that include more than 30 million people across 22 states. Trinity Health includes 93 hospitals as well as 109 continuing care locations that include PACE, senior living facilities, and home care and hospice services. We are called by our Catholic faith to preserve the sanctity of life, and are working to reduce violence in our communities and around the world.

The proposed rule referenced above addresses many aspects of firearm regulation, sales and oversight, however Trinity Health is especially concerned about the shift of weapon sale regulation from the State Department to the Commerce Department. Our concern stems from the risk we perceive about how this regulatory change could increase the amount of violence caused by weapons around the world. All forms of firearms are used extensively in criminal violence around the world. We believe the world is better served by their export being handled by the State Department, which is required and organized to consider the probable impacts in importing nations on stability, human security, conflict, and human rights. We have great concern about the proposed transfer of the regulation of gun exportation licensing from the State department to the Commerce Department, whose principle mission is to stimulate trade.

Every day around the world firearms are used to kill a thousand people in acts of organized crime, political violence, terrorism, and human rights violations. The proposed rule would transfer the regulation around the sale of weapons – including AR-15, AK-47 and other military-style assault rifles and their ammunition – to the Commerce Department control. These are among the deadliest personal-use weapons produced in the United States, and it is our understanding that they are weapons of choice for criminal organizations in Mexico and other Latin American countries that are responsible for most of the increasing and record levels of homicides in those countries. We believe that the export of these weapons should be subject to greater regulation, not less.

We believe that the Department of Commerce is effective at advancing the interests and revenues of private businesses in our country, which contributes to a strong economy. However, we believe that firearms and ammunitions should be be viewed as a commodity that should benefit from reduced regulatory oversight. Boosting economic development and competitive advantage at the expense of increased violence including loss of life is

unconscionable to us. We strongly urge the Departments of Commerce and State to rescind this proposed rule.

Thank you for consideration of our comments on this important issue. If you have any questions, please feel free to contact me at wellstk@trinity-health.org or 734-343-0824.

Sincerely,

A handwritten signature in cursive script that reads "Tonya K. Wells". The signature is written in dark ink and is contained within a rectangular box.

Subject: RIN 0694-AF47; Control of Firearms, Guns, Ammunition and Related Articles the President Determines No Longer Warrant Control Under the United States Munitions List (USML)

Dear Mr. Clagett:

The purpose of this letter is to provide comments to the proposed rule to amend the *Export Administration Regulations* (EAR) to control those items identified to no longer warrant control under United States Munitions List (USML) Category I - Firearms, Close Assault Weapons and Combat Shotguns; Category II - Guns and Armament; and Category III - Ammunition/Ordnance U.S. Munitions List (USML), which the Bureau of Industry and Security (BIS) published in the *Federal Register* on May 24, 2018 (RIN 0694-AF47; 83 FR 24166).

The F.A.I.R. Trade Group ("F.A.I.R.") is a nonprofit organization dedicated to protecting the interests of the firearms and ammunition import and export communities. F.A.I.R. works with many U.S. government agencies, including the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), the U.S. Department of State, Directorate of Defense Trade Controls (DDTC), and the Department of Commerce, Bureau of Industry and Security (BIS) to provide solutions to the concerns of F.A.I.R. members. Our membership includes importers and exporters of firearms, ammunition, and other defense and dual-use articles who rely on licenses issued by ATF, DDTC, and BIS. Many members also hold Type 07 or Type 10 licenses as manufacturers of firearms. Members provide equipment to domestic law enforcement agencies and the U.S. military who require such items to carry out their public safety and national security missions and sell the articles they import to distributors for general commercial sale. A number of our members also produce firearms and ammunition that are exported to foreign governments for their national defense, consistent with the foreign policy of the United States.

F.A.I.R. welcomes the opportunity to provide comment on the proposed revisions to the EAR to capture those items moving from USML Categories I, II, and III. We applaud the continuing efforts by BIS and DDTC to revise the USML so that its scope is limited to those defense articles that

1775 I STREET, N.W., SUITE 1150, WASHINGTON, DC 20006

Mr. Clagett
RIN 0694-AF47
July 9, 2018
Page 2 of 6

provide the United States with a critical military or intelligence advantage or are inherently for military end use, and to remove those items that are widely available in retail outlets in the United States and abroad.

Overall, the proposed revisions to the EAR and USML Categories I, II, and III are a positive move to a more rational control of firearms and ammunition, and related parts, components, accessories, and attachments. The transition of certain items to the control of the EAR will serve to right-size license requirements while still maintaining necessary oversight of exports of these items. Additionally, by moving such items to the EAR, many domestic manufacturers who do not conduct exports will be relieved of the significant financial burden of registering under the ITAR.

We provide the following comments for BIS consideration, and are available should BIS or DDTC require additional information or wish to discuss our comments further:

1. **Implementation Period.**

As noted in the proposed rule, BIS has adopted a delayed effective date of 180 days for previous rules revising entire categories of the USML and moving items to the CCL. BIS has requested comments from industry as to whether this implementation period should be applied to the revised Categories I, II, and III.

Recommendation: Split implementation period. We wish to support the continued delayed effective date of 180 days for those industry members who need make changes to IT systems, technology controls plans, and other business processes necessary to implement the rule. However, there will be a number of domestic companies who, for example, do not engage in the business of exporting but engage in certain gunsmith activities or manufacture firearms parts and components for firearms that transition to the EAR who will wish to immediately implement the new rules in order to be relieved of the financial burden of ITAR registration. Therefore, we recommend DDTC allow for a split implementation period to allow those companies whose entire operations transition to the EAR to immediately shift to those controls while allowing those companies whose operations either remain under the ITAR or are now split between the EAR and the ITAR adequate time to make necessary changes to their businesses. There is precedent for a split implementation period as it was done in the *Federal Register* notice implementing of revisions to USML Category XI and corrections to USML Category VIII (See 79 FR 37536).

2. **Transition Firearm Suppressors (Silencers) to the CCL.**

DDTC's proposed rule indicates that "[USML Category I] Paragraph (e) will continue to cover silencers, mufflers, sound suppressors, and specially designed parts and components." The proposed rule further indicates that its objective, after the proposed revisions, is to capture only those articles in USML Categories I, II, and III that provide the United States with a critical military or intelligence advantage, or are inherently for military end use. The items proposed for transition to the EAR do not meet this standard, "including many items which *are widely available in retail outlets in the United States and abroad* [emphasis

Mr. Clagett
 RIN 0694-AF47
 July 9, 2018
 Page 3 of 6

added].” Firearm suppressors (silencers) do not provide a critical military or intelligence advantage and are not inherently for military end use. Moreover, the hardware and associated technology is widely available throughout the world. Therefore, based on the litmus test identified in the proposed rule, firearm suppressors (silencers) should not be listed on the USML and should be more appropriately controlled on the CCL in the EAR.

Recommendation: Remove Firearm suppressors (silencers) from USML Category I(e) and add them as a controlled item under ECCN 0A501.

3. **Use of “Combat Shotguns”.**

DDTC proposes to revise USML Category I(d) to read as follows: “*(d) Fully automatic shotguns regardless of gauge.” This proposed revision removes the words “combat shotguns.” While we welcome this change due to the long-standing confusion over this undefined term, the words “combat shogun” are used in the proposed revisions to the EAR, specifically in the Related Controls of proposed ECCN 0A502, which reads: “This entry does not control *combat shotguns* [emphasis added] and fully automatic shotguns. Those shotguns are “subject to the ITAR.” The Related Control to ECCN 0A502 does not go on to provide a definition for “combat shotgun.” The lack of definition and the removal of the reference in the revised USML Category I(d) causes confusion as to what type of firearm is being referenced.

Recommendation: Remove the reference to “combat shotguns” in ECCN 0A506 and have the Related Control to reflect the language used in the ITAR. The Related Control would read as follows: “*This entry does not control fully automatic shotguns regardless of gauge. Those shotguns are “subject to the ITAR.”*”

4. **Automated Export System.**

Currently, when exporting firearms, there is no requirement to enter serial numbers of firearms to be exported into the Automated Export System (AES). However, in the BIS proposed rule, there is a proposal to expand the data elements required as part of an AES filing for these items to include serial numbers, make, model and caliber. This requirement is overly burdensome and will exponentially lengthen the time required for filing AES entries. Contrary to the proposed rule, this is not a mere “carrying over” of existing CBP filing requirements for items transferred from the USML to the CCL. The cited reference to information Department of Homeland Security currently collects under OMB Control Number 1651-0010 (CBP Form 4457, Certificate of Registration for Personal Effects Taken Abroad) applies only to personal firearms temporarily exported. However, the proposed rule would apply to all exports of items controlled under ECCN 0A501.a or .b and shotguns with a barrel length less than 18 inches controlled under ECCN 0A502. Consequently, there is a significant change to the information being collected and to the burden hours as a result of this proposed rule.

Mr. Clagett
 RIN 0694-AF47
 July 9, 2018
 Page 4 of 6

Recommendation: Remove the expansion of data elements required as part of an AES filing for firearms. The serial numbers, make, model and caliber of firearms exported, as well as the reference to the export vehicle (e.g., export license, exception) will be maintained by the exporter as part of its acquisition and disposition records required under the Gun Control Act and ATF regulations (27 C.F.R. Pt. 478, Subpart H), which are the same records currently maintained for firearm exports subject to the ITAR. Therefore, there is no loss of oversight or information by transitioning these items to the EAR and thus no need for adding data fields to AES entries. This is not required under the ITAR, and therefore should not now be required under the EAR.

5. **ECCN 0A501**

The BIS proposed rule states in “*Related Controls*” that magazines with a capacity of 50 rounds or greater are “subject to the ITAR.” However, the proposed USML Category I(h)(1) references only magazines and drums with a capacity *greater than* 50 rounds (emphasis added).

Recommendation: Revise ECCN 0501 “*Related Controls*” so that the capacity round description is consistently with USML Cat. I(h)(1).

6. **ECCN 0A501.d.**

This paragraph includes a reference to “complete breech mechanisms” with no further explanation or note to define the terms. It is unclear what would constitute a complete breech mechanism that is distinct from other parts specifically identified in paragraph .c.

Recommendation: Revise ECCN 0A501 .d to include a definition or explanation of what constitutes a “complete breech mechanism,” and to ensure there is no redundancy with any of the parts referenced in paragraph .c.

7. **ECCN 0A501.y.**

The proposed rule explains this paragraph would cover such items as scope mounts or accessory rails, iron sights, sling swivels, butt plates, recoil pads, bayonets, and stocks or grips that do not contain any fire control “parts” or “components.” The paragraph indeed lists such items in specifically enumerated subparagraphs .y.1 - .6. Does this mean the .y paragraph controls only those items enumerated in the following subparagraphs .1-.6, or does the umbrella language in .y. serve to capture other parts, components, or attachments that are not specifically enumerated in subparagraphs .y.1 - .6., and not elsewhere specified (such as magazines for less than 16 rounds) ? In other words, does the .y. paragraph itself serve as a catch-all for “parts”, “components”, “accessories” and “attachments”?

Recommendation: Revise paragraph .y by replacing the period at the end of the paragraph with the phrase “including” or “as follows:” so as to clarify whether .y is limited to the enumerated subparagraphs, or itself is a control paragraph in which

Mr. Clagett
 RIN 0694-AF47
 July 9, 2018
 Page 5 of 6

items can be controlled. 0A501.y would read as follows: *“Specific ‘parts,’ ‘components,’ ‘accessories’ and ‘attachments’ ‘specially designed’ for a commodity subject to control in this ECCN or common to a defense article in USML Category I and not elsewhere specified in the USML or CCL, as follows [or including]:”*

8. **ECCN 0A502.**

The proposed rule states that this ECCN would control both the shotguns currently on the USML that are to be added to the CCL (barrel length less than 18 inches) and the shotguns and the enumerated “parts” and “components” currently controlled in ECCN 0A984 (barrel length 18 inches or greater). However, the items included in the ECCN header are separated by semicolons and there is no clear statement that the parts and components listed in the header are specific to shotguns. For example, because it is not clear that the enumerated items are specific to shotguns, there could be confusion as to whether 10 round magazines are controlled in ECCN 0A502, ECCN 0A501.y., or would such items fall to EAR99?

Recommendation: Revise ECCN 0A502 to specify the parts and components enumerated in the ECCN header are SHOTGUN parts and components. We also recommend defining or explaining what constitutes “complete breech mechanism” (see comment for ECCN 0A501.d above).

9. **ECCN 0A505.**

The proposed rule states that ammunition parts and components would be eligible for license exception LVS with a limit of \$100 net value per shipment. This is a reduction in value compared to the ITAR license exemption currently available under 22 C.F.R. § 123.16(b)(2), which is capped at \$500. It is unclear why the transition to the EAR would result in a reduction in the license exception value limit.

Recommendation: Revise ECCN 0A505 to increase the value limit for the LVS license exception for ammunition parts and components in paragraph .x to \$500.

10. **ECCN 0A606.**

The DDTC proposed rule states that “the articles currently controlled in [Category II] paragraph (f), engines for self-propelled guns and howitzers in paragraph (a), will be on the CCL in ECCN 0A606.” However, there are no proposed corresponding changes to ECCN 0A606 in the BIS proposed rule.

Recommendation: Revise ECCN 0A606 to clearly identify that engines for self-propelled guns and howitzers are controlled therein.

Mr. Clagett
RIN 0694-AF47
July 9, 2018
Page 6 of 6

11. **§ 758.10 Entry clearance requirements for temporary imports.**

The proposed rule fails to take into consideration temporary imports by nonresident aliens who are subject to ATF regulations under 27 C.F.R. § 478.115(d). Although the license exception BAG references ATF's jurisdiction with these types of imports, proposed section 758.10 is silent, except for ATF's regulation of *permanent imports* (paragraph (2)).

Recommendation: Add language to 758.10(a)(2) carving out from the entry clearance requirements for temporary imports by nonresident aliens who temporarily import firearms under the provisions of 27 C.F.R. § 478.115(d).

12. **§ 762.2 Records to be retained.**

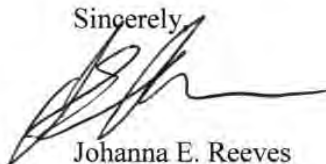

The proposed rule indicates that BIS wishes to make changes to EAR recordkeeping requirements for firearms being moved to the CCL. Specifically, BIS proposes to "add a new paragraph (a)(11) to specify the following information must be kept as an EAR record: Serial number, make, model, and caliber for any firearm controlled in ECCN 0A501.a and for shotguns with barrel length less than 18 inches controlled in 0A502." This additional recordkeeping requirement is unnecessary as it is duplicative of the information that is required to be retained in a company's ATF bound books pursuant to the Gun Control Act and ATF regulations. In other words, the information that BIS seeks to retain is already being maintained by companies under ATF rules and regulations.

Recommendation: Remove the proposal to add paragraph (a)(11).

* * * * *

F.A.I.R. thanks the Departments of State and Commerce for the opportunity to participate in the regulatory revision process. We hope that our comments assist the government in reducing jurisdictional ambiguities and clarifying the articles that will remain subject to the ITAR. For your information, we also provide a copy of the comments submitted in response to the DDTC proposed rule. Should you have any questions, or require additional information as you review public comments received, please do not hesitate to contact me at 202-587-2709 or execdir@fairtradegroup.org.

Sincerely

Johanna E. Reeves
Executive Director

I oppose this rule change. I'm very concerned that it will lead to greater accessibility of guns for people who shouldn't have them. No more loss of human life PLEASE!

General Comment

Firearms are a matter of security not of commerce. Let the state department handle matters of security and the sales of firearms rather than transferring that oversight to commerce.

On May 24, the Trump Administration formally proposed a new rule that would loosen regulations over gun exports, potentially increasing the risk that dangerous weapons may end up in the hands of international criminals. The proposed rule would dramatically change the regulatory structure for firearm exports. The proposed rule is complex and appears to be largely driven by the interests of industry. We are concerned that the proposed rule may not adequately address our national security, foreign policy, international crime, terrorist threats, or the need for transparency so Congress and the public may understand the impact of these rules and potential firearm exports. We are also concerned that the proposed rule fails to recognize the inherently military nature of many of the relevant firearms. Rather than moving forward with the proposed rule, the Administration should consider other alternatives to better balance the important interests at stake.

Borderview comments on BIS Proposed Rule

July 9, 2018

Submitted at www.regulations.gov – Docket BIS-2017-0004, and by Email: steven.clagett@bis.doc.gov

Mr. Clagett et. al.,

BORDERVIEW appreciates the opportunity to comment on the long-awaited transition of firearms and related items from the jurisdiction of the Department of State to the Department of Commerce. We have closely followed the efforts since the early days of the Obama administration to complete this phase of Export Control Reform, and applaud the publishing of these proposed rules.

Broadly speaking, we are very supportive of the proposal and would like to underscore the well-laid justifications made in the 'Background' section of the proposed rule, and furthermore in the related ['Myths vs. Facts' release](#) posted on the Department of Commerce website. BORDERVIEW looks forward your publishing of the Final Rule and completion of these longstanding and bipartisan efforts to simply our nation's export control infrastructure to better control the most military-sensitive items, while maintaining appropriate controls on Dual Use items such as firearms.

After careful review of the Proposed Rules, we offer the following comments and recommendations. In particular, we are most concerned about a number of facets of the proposed rule which add new and additional burden, above and beyond that which has historically been imposed by the ITAR and without proportionate benefit to industry or government. We will identify which comments below are as such.

1. Eliminate Proposed § 758.1(g)(4) – Expanded Data Elements for EEI filing in AES.

The proposed rules would add required AES data elements of "manufacturer, model number, caliber and serial number" for all exported firearms (to proposed § 758.1(g)(4)). Perhaps most concerning to us as a leading international firearm logistics firm are these burdensome, redundant and unnecessary additional data collection requirements. While it may seem like a relatively simple requirement, we see several problems with imposing this new data collection, and little if any benefit over the existing requirements, particularly with respect to serial number reporting.

First, this adds a new and significant burden over the longstanding requirements, and one which would require exporters to invest significant time and financial resources in re-programming software and AES interfaces, or in repeated and cumbersome manual data entry. Rather than “reducing the procedural burdens and costs of export compliance” as is the stated intent of the proposed rule, this new requirement is one that does just the opposite. As we’ll explain below, we believe this new burden is imposed *without* providing any real improvement in the U.S. Government’s ability “to enforce export controls for firearms appropriately” or “to make better use of its export control resources.”

surprisingly simple.[™]

The explanation given for this new requirement in the Proposed Rule is that the "requirement would ensure law enforcement officials are able to effectively verify that firearms exports are properly authorized and in conformance with all applicable regulations." However, as explained below, we believe this change would affect no substantive improvement in this regard.

Serial Number data element in EEI filing in AES

Serial numbers are generally *not* listed on an export license issued by BIS (except in the rare case they are entered by the applicant at the time of application, which is not required and would be unusual). Therefore, the presence of serial numbers in an AES filing would not assist law enforcement in verifying that items being exported on a given shipment match the items on the related export license. For example, an AES filing noting a Serial Number of "ABC123XYZ" for a given rifle would provide no assistance in matching that particular rifle to the associated export license which does not list the serial number. Furthermore, it should be noted that attempting to address this reality by requiring firearm serial numbers to be listed on export license applications would contradict the very nature of the BIS licensing philosophy – allowing commodity-based predictive license quantities for use over a set time.

Another concern about the mandated electronic collection of serial number data for exported firearms is that it would amount to a de facto electronic government Registry of all exported firearms. Congress has, for many years and in many forms, prohibited the creation of a federal firearms registry. Specifically, the Firearms Owners Protection Act codified this intent of Congress in 18 U.S.C. § 926(a)(3), which states:

“No such rule or regulation prescribed after the date of the enactment of the Firearms Owners Protection Act may require that records required to be maintained under this chapter or any portion of the contents of such records, be recorded at or transferred to a facility owned, managed, or controlled by the United States or any State or any political subdivision thereof, nor that any system of registration of firearms, firearms owners, or firearms transactions or disposition be established. Nothing in this section expands or restricts the Secretary's authority to inquire into the disposition of any firearm in the course of a criminal investigation.”

To the extent that such a registry may aid law enforcement in the necessary function of tracing firearms, it should be noted that an effective system already exists through the ATF's National Tracing Center (NTC). The NTC relies primarily on the required records kept by Federal Firearms Licensees (FFLs), which already include the data elements of manufacturer, model designation, caliber and serial number, among others. As all U.S. commercial firearm exporters would be FFLs, this data is already kept in a proven system. To require it separately here would be unnecessarily duplicative and burdensome, without additional benefit.

surprisingly simple.[™]

Other additional data elements in AES (manufacturer, model number, caliber)

Existing regulations in both the FTR and EAR already require that the item description entered in the AES filing conforms to that shown on the license. Thus, the explicit addition of required data elements of "manufacturer, model number (and) caliber" would provide no further to ability for law enforcement to "effectively verify that firearms exports are properly authorized."

The Foreign Trade Regulations state for 'Commodity description', "If the shipment requires a license, the description reported in the EEI shall conform with that shown on the license." (15 CFR 30.6(a)(13))

The Export Administration Regulations state for 'Exports under a license', "...you must report on the EEI filing to the AES...an item description identical to the item description on the license." (15 CFR 758.1(g)(1))

Therefore, adding new required data elements would be unnecessarily duplicative and burdensome. Exporters are already required to enter data into AES in such a way that it can be matched to the export license by law enforcement verifying a shipment. If there has been a problem with exporters not doing this in the past and thus impeding law enforcement verification, it would be best addressed by educating on and enforcing the existing requirements of the FTR and EAR, rather than adding a new and duplicative information collection requirement specific only to firearms.

Furthermore, like serial numbers, all of these proposed data elements are already kept by Federal Firearms Licensees under the provisions of the Gun Control Act (GCA), and are accessible to law enforcement as needed.

Finally, if after consideration of our comments herein BIS decides to proceed with proposed § 758.1(g)(4) to include model, the wording "model number" should be changed to simply "model", or "model designation (if assigned)" instead. Only a fraction of firearm models are "numbers", while many others are names, and some do not have model designations assigned at all. ATF recognizes this in their Regulations which refer simply to "model", or in some cases "Model Designation (if assigned)."

CBP changes to AES as requested by BIS

The proposed rule notes that such a proposed requirement would only be included in the final rule "if CBP has made such data easily enterable in AES." As explained above, multiple regulations already require the data to be entered in such a manner that law enforcement can match it to the export license.

Yet, if BIS can work with CBP to affect one needed change to the AES, we would suggest allowing a much higher number of characters in the 'Commodity Description' field, which is currently limited to 45. This character count limit is likely a driving factor in any past verification issues experienced which may have compelled BIS to propose adding new data elements.

*surprisingly simple.*TM

Exporters are already required to report all of the following within the 45-character 'Commodity Description' field for licensed items:

- "item description must be stated in Commerce Control List (CCL) terms" (15 CFR 758.1(g));
- "fully state the name of the commodity in terms that can be identified or associated with the language used in Schedule B or HTSUSA (usually the commercial name of the commodity), and any and all characteristics of the commodity that distinguish it from commodities of the same name covered by other Schedule B or HTSUSA classifications" (15 CFR 30.6(a)(13));
- "If the shipment requires a license, the description reported in the EEI shall conform with that shown on the license." (15 CFR 30.6(a)(13));
- "When exporting under the authority of a license, you must report on the EEI filing to the AES ... an item description identical to the item description on the license." (15 CFR 758.1(g)(1)).

As you can imagine, meeting even one of these requirements can use 45 or more characters (especially the "item description *identical* to the item description on the license" requirement). Therefore, simply allowing a much higher number of characters in this field (e.g. 200+) would allow exporters to include all of the required information to meet regulatory compliance requirements, and likely solve many issues. (BIS' SNAP-R system allows up to 1,440 characters for each Export Item's technical description, thus to truly enforce the EAR requirement of identical AES description reporting, it should be 1,440+).

Applicability to Temporary Exports / Imports under TMP

One note to all of this is that such a requirement of mandatory serial number reporting in AES might make sense only for Temporary Exports and Imports under TMP in particular, to allow re-import procedures to be followed and verified. However, the requirements proposed in new § 758.10(b)(1)(ii) and § 740.9(b)(5)(iv)(B) already cover this by requiring serial numbers as part of a complete list to be submitted to CBP at the time of import and/or export.

However, it should be noted that if a firearm is shipped under TMP for repair and then found to need replacement under RPL, then the serial number(s) of re-imported / re-exported items would be different than those originally reported to CBP. Perhaps the final rule could address this by providing certification language for such cases, e.g. "Serial # _____ on this shipment is a one-to-one replacement of defective serial # _____ under the authority of RPL. In accordance with the EAR, no further shipments will be made of the defective item already replaced under RPL."

Paperwork Reduction Act analysis

In the Paperwork Reduction Act (PRA) Requirements analysis in the proposed rule, we note a couple of concerns. The PRA analysis rightly states (emphasis added): "The proposed rule would include a

surprisingly simple.[™]

requirement that, for *all* exports of items controlled under ECCNs 0A501.a...the exporter provide to CBP the serial number, make, model, and caliber for *each* firearm being exported."

However, the analysis goes on to say "The Department of Commerce is carrying over the existing CBP filing requirements for items transferred from the USML to the CCL." We are not aware of any existing CBP or ITAR requirement for explicit reporting of these data elements within AES, and believe this is a new requirement and new information collection.

Further, the analysis goes on to say "The Department of Homeland Security currently is collecting these data elements for firearms "subject to the ITAR" under OMB Control Number 1651-0010 (CBP Form 4457, Certificate of Registration for Personal Effects Taken Abroad). There is no change to the information being collected or to the burden hours as a result of this rule." Again, we believe this is a new collection and not the same as the existing OMB-approved collection referenced. Specifically, CBP Form 4457 is only used for temporary exports, whereas this proposed rule would require these data elements to be reported for *all* firearm exports. As such, in reality there will be a very substantial increase to the burden hours and a new collection as a result of the proposed rule if published as written.

Even when only considering temporary exports recorded on the CBP Form 4457, explicitly requiring the listed data elements is different than the instrument itself which merely requests "Description of Articles", leaving the format up to the exporter and CBP to record in such a way as will allow their proper identification upon re-import.

Note: these PRA-related comments have also been submitted directly to the designated contact at OMB in accordance with the directive in the proposed rule, but should nonetheless be considered and addressed by BIS in their final rule.

2. Change the proposed cut-off year for 'Antique' firearms to match U.S. law, current ITAR, and thus avoid adding additional burden in this rule.

For domestic purposes, U.S. law defines antique firearms (in the Gun Control Act, 27 CFR § 478.11) as those "manufactured in or before 1898". For import purposes, Customs uses the same definition. For export purposes, the same definition and cut-off year has long been used (in the ITAR, 22 CFR 123.17(b)). However, without explanation, this proposed rule would significantly alter the definition of antique firearms by eliminating nine important years of manufacture. In this sense, the proposed rule as written is significantly more burdensome than the ITAR. We export many antique firearms made in the early-to-mid 1890's, such as early Winchester Model 1886, 1892 and 1894 rifles or early Colt Single Action Army revolvers. Under current law, these do not require an export license but can be shipped under exemption. However, changing this definition to "in or before 1890" would significantly and negatively change this, with no added national security benefit. The firearms manufactured in the 1890's do not pose a security threat to our Nation and are merely collector's pieces.

surprisingly simple.[™]

The lack of any explanation on this significant change in the proposed rule makes it seem almost as if it were a mistake or simple typo. It is our hope that this is the case and that the final rule will align this definition with U.S. domestic, import and historical export law instead of creating a new definition of its own. On the other hand, it seems that this change may be an attempt to align the proposed rule with the Wassenaar Arrangement definitions. If indeed this is the case, we still argue that aligning instead with existing U.S. law ("in or before 1898") is the best policy here, to avoid adding additional burden in this rule and to stay consistent with longstanding U.S. definitions of antique firearm. If however for some reason Commerce Department must align with the Wassenaar, then the proposed rule as written is still wrong. The Wassenaar Arrangement Munitions List uses the 1890 cut-off year for handguns, but actually uses "manufactured earlier than 1938" for antique rifles ([page 175, ML1.a, Note a,b](#)) and shotguns (page 176, ML1.b, Note a). Therefore, if aligning to Wassenaar, the year for rifles must be changed to "in or before 1938" and a similar definition of non-controlled antique shotguns must be added to 0A502.

Even if not aligning to Wassenaar in the final rule, we do request that the final rule adds a definition and cut-off year for antique shotguns to 0A502, ideally the same "in or before 1898" under other U.S. law. It does not make sense to have such a definition of antique rifles and handguns to allow for export of such items without a license but not have such a definition for antique shotguns. Shotguns are arguably already less military sensitive (thus their long-time inclusion as a dual use item on the EAR rather than on the ITAR). So, to allow for export of a handgun made in 1889 without a license but require a full export license for a sporting shotgun made in the same year does not make sense. This could be accomplished by simply adding a "Note 1 to 0A502" stating such. Or, if the existing "Note 1 to 0A501" is meant to include antique shotguns (it does not explicitly leave them out and states "antique firearms" generally), then it should be made more clear to this end.

3. Align availability of LVS at \$500 to 0A502 shotgun-related items.

ECCN 0A501 allows a list based license exception for LVS at a \$500 threshold for 0A501.c, .d, and .x (and including .e if the ultimate destination is Canada). We greatly appreciate this being brought over from the comparable exemption(s) in the ITAR, and understand the justification for simplifying to a net \$500 value (vs. 'wholesale' value under the ITAR).

However, ECCN 0A502 for shotguns does not allow for LVS at any amount for comparable items. While we recognize that many small shotgun parts are not listed and thus EAR99, the proposed rule would control shotgun trigger mechanisms, magazines and magazine extension tubes more stringently than comparable parts for 0A501 rifles and handguns. For example, a \$45 two-round extension tube for a Remington 870 shotgun ([such as this item](#)) would require an export license, while a case of 0A501.d rifle magazines worth \$450 could be exported without a license under LVS.

surprisingly simple.™

Thus, we suggest aligning availability of LVS at \$500 to 0A502 shotgun-related items. Since these parts are currently listed in the ECCN 0A502 heading, the heading could be changed to “Shotguns and related commodities (See List of Items controlled)...” then under the “List of Items Controlled” enumerate the items to include “complete trigger mechanisms”, “magazines”, and “magazine extension tubes” with corresponding reasons for control allowing LVS for such items to the same \$500 limit as for 0A501 items.

4. Align dollar value threshold of LVS for 0A505 ammunition components to \$500.

We greatly appreciate the inclusion of 0A505.x ammunition components in the LVS exception for that ECCN. However, we find the \$100 limit to be low in many instances. Typically, to justify the cost of an international shipment, an order for such items is usually between \$100 to \$500. Per-unit cost of items such as unprimed brass can also be relatively high, particularly for specialty items likely to be sourced for a small shipment. For example, a recent shipment of Norma USA .470 Nitro Express reloading brass was \$5.44 per piece. They come in boxes of 25, so just two small boxes are worth \$272. Thus such a shipment would require a license if the LVS threshold is kept at \$100. We request that it be aligned to the other related LVS thresholds for firearms-related items at \$500 for consistency and usability.

5. Define 'Complete Breech Mechanism' (for 0A501 and 0A502).

The ITAR has long used the term “complete breech mechanism” without any definition to guide industry as to the meaning of this non-standard terminology. As this proposed rule continues to use this term, we request that a definition be provided. Over the years we have received varying definitions from representatives of DDTC. Our attempt to obtain an official written definition by means of an Advisory Opinion request was directed to instead be submitted as a request for an item-specific Commodity Jurisdiction. The most clear definition we’ve received to date is something comparable to a “complete bolt” or “complete bolt carrier group.”

To the extent that what is meant by “Complete Breech Mechanism” may possibly be covered by the enumerated items in 0A501.c, it could possibly even be deleted altogether. However, presuming that something additional is meant by this term being kept in a separate 0A501.e (and in the heading of 0A502), a definition is required for industry to properly comply with the proposed rules.

6. Add License Exception ‘Servicing and replacement (RPL)’ as a valid purpose for a temporary import under new § 758.10.

License exception RPL (§ 740.10(b)) allows for ‘Servicing and replacement’ including overhaul and reconditioning, so long as it does not change the basic characteristics (e.g. accuracy, capability, performance, or productivity) of the commodity. This is similar to comparable ITAR temporary import license exemption found at 22 CFR 123.4(a)(1).

surprisingly simple.[™]

So, it is our understanding that a firearm could be sent from a foreign sender to a United States party for servicing – a temporary import. However, the new § 758.10 “Entry clearance requirements for temporary imports” do not address the potential use of RPL for this purpose. Specifically, proposed § 758.10(b)(1)(i) requires a statement to CBP certifying “...This shipment will be exported in accordance with and under the authority of License Exception TMP.” However, if it was going under RPL rather than TMP, this statement would be a false certification.

7. Clarify the classification of Combination Guns.

From time to time we deal with firearms known as “combination guns”. Such firearms have at least one rifled barrel and at least one smoothbore barrel (generally a shotgun style barrel). While our reading of the proposed rules would leave us to believe 0A501 is the best fit for such items, we suggest that BIS add clarity on their proper classification.

This could be accomplished by changing the heading of ECCN 0A501 to instead read “0A501 Firearms (including combination guns, but excluding 0A502 shotguns) ...”. Or, a “Note 2 to 0A501” could be added to the bottom of that ECCN to read something like “Combination guns (those with at least one rifled barrel and at least one smoothbore barrel) are controlled by this ECCN.” Alternately, if they should instead be classified under 0A502 or otherwise, this should be clearly noted in the final rule.

8. Clarify that new § 758.10 requirements do not apply to temporary imports under the provisions of ATF Form 6 NIA (27 CFR 478.115(d)).

The proposed rules appropriately add §740.14(e)(4) to clarify that nonresident aliens leaving the United States may export 0A501 firearms and ammunition that they imported under the provisions of 27 CFR 478.115(d). However, the new § 758.10 “Entry clearance requirements for temporary imports” appears to apply to *all* temporary imports at the time of temporary import.

As the requirements of § 758.10 should not apply to nonresident aliens temporarily importing firearms under the separate provisions of the ATF, this should be clarified in the final rule. Wording to this effect could be added to § 758.10(a), ‘Scope’, whether within the body of (a) or as a new subparagraph (3). This would eliminate confusion wherein CBP may attempt to enforce the provisions of § 758.10 on nonresident aliens bringing firearms into the U.S. with an approved ATF Form 6 NIA for a hunting trip or shooting competition.

If this was not an oversight but rather the intent of BIS that § 758.10 would apply to such nonresident aliens, we strongly urge BIS to reconsider their position. Much like the challenge of the AES filing requirement for personal firearms being temporarily exported, requiring foreign persons to follow commercial procedures for temporary import and re-export (including AES filing) would be extremely cumbersome. New § 758.10 should not apply to such cases, and it should be made clear as such.

*surprisingly simple.*TM

10. Clarify whether 0A501.y includes only the specific enumerated y.1 through y.6, or all “specially designed” “parts,” “components,” “accessories” and “attachments”.

ECCN 0A501.y lists six specific types of specially designed “parts,” “components,” “accessories” and “attachments” in various sub-paragraphs y.1 through y.6. However, the .y paragraph is not clear whether these are the only items controlled under .y, or if others not enumerated are included. While we do not believe this is intended to be a ‘catch-all’ like .x, it is not as clear as the .y sections of other ECCNs which tend to use the wording “as follows” when applicable preceding an enumerated list.

For example, a set of fiber-optic sights for a pistol are not “iron sights” as listed in y.3, but may be “specially designed” “attachments.” Would such an item be controlled under .y? Even though Controls only apply to .y for UN and AT purposes, whether such non-enumerated “attachments” require AES filing, etc. for most countries depends on the clarification of this .y sub-paragraph.

11. Explicitly clarify the classification of detachable firearm magazines with capacity ≤ 16 rounds.

Another potential “attachment” item that would benefit from explicit clarification in this regard is detachable magazines for 0A501 firearms with a capacity of less than or equal to 16 rounds. While 0A501.d explicitly lists magazines with a capacity of greater than 16 rounds, common magazines with a lesser capacity are sure to be one of the most shipped items related to firearms.

We have already heard varying interpretations from highly reputable firms within the industry as to whether such magazines would be controlled. For example, those who interpret such magazines as an “attachment” (they are not necessary for the operation of a firearm, but do enhance their usefulness), and who understand the .y paragraph to only include those specifically-enumerated items (see above), have stated that such magazines are EAR99. On the other hand, those who interpret .y to include all “specially designed” “attachments” in addition to those specifically enumerated, believe that such magazines are controlled under .y and require AES filings regardless of destination.

To eliminate this confusion, a “Note” could be added to the bottom of the ECCN, such as “Note 3 to 0A501: Detachable magazines with a capacity of less than or equal to 16 rounds “specially designed” for a commodity controlled by paragraph .a or .b of this entry are classified as “attachments” and are EAR99 commodities.”

12. Eliminate duplicative new § 762.2(a)(11) recordkeeping requirement.

Proposed new § 762.2(a)(11) would add as an EAR record the “serial number, make, model and caliber for any firearm controlled in ECCN 0A501.a” and for certain shotguns. However, the Government already requires such records to be kept under the provisions of the Gun Control Act (GCA). Thus, the requirement that exporters maintain such as an EAR record is unnecessarily duplicative and

burdensome. Under the time-tested provisions of the GCA, the government already has access to such records for inspection as needed.

Proposed Effective Date of Final Rule

We suggest that BIS implement a split effective date for the Final Rule, as was done for the 2014 final rule in 79 FR 37535. In the case of the proposed rule now at hand, many companies will require the full 180 days to make changes to their internal systems and classification matrixes. As such, a 180 day effective date should be allowed for such companies. On the other hand, smaller companies who are most burdened by the registration costs and other requirements of the ITAR, will be more agile and able to switch over earlier. For example, gunsmiths who do no exporting but are currently required to register and pay related fees to DDTC would benefit greatly from an immediate (or very short) effective date of the final rule. To the extent possible, a split effective date (immediate / 180 days) would be advisable.

Regardless of the effective date published in the final rule, we respectfully request that BIS and DDTC complete their review of comments and publish a Final Rule as soon as is reasonably possible. Given the long-awaited nature of these rules, prompt publishing of the Final Rule after appropriate review and consideration of all comments would be greatly appreciated and beneficial to both industry and government.

Summary and Conclusion

While we have raised a number of important concerns specific to the implementation of this proposed rule, we wish to emphasize again our overall support of the transition of these items from the ITAR to the EAR. The justification provided is clear and absolutely sensible. Regardless of recent politicization of the issue by some in Congress and the media, this has truly been an historic bipartisan effort over many years, starting in the earliest days of the Obama administration and now coming to fruition under the current administration.

On a separate but related note, BORDERVIEW also requests the publishing of BIS' already-drafted 'shotgun rule' to allow the Canadian IIC to act as the export authorization for shotguns to Canada.

BORDERVIEW looks forward to your publishing of the Final Rule after careful review of our enclosed comments, and those of other impacted parties. Please do not hesitate to contact me with any questions.

General Comment

I strenuously object to the proposed rule to transfer regulation of firearms exports from the State Department to the Department of Commerce. The State Department is best equipped to handle this role. It is vitally important for the United States to restrict sales of firearms to oppressive regimes and prevent them to falling into the hands of terrorist and organized crime groups. Given the emerging tensions and uncertainties in international relations, firearm exports require increased regulation as military devices, not less.

Please keep arms regulations under the DOS to keep the world a safer place. Unregulated arms sales will increase violence in the world therefore increasing immigrants seeking asylum, such as those from central America. The commerce dept is focused on sales and profits and isn't the appropriate organization to regulate arms sales.

General Comment

I think moving control of international firearms sales from the State Dept. to the Dept. of Commerce would be a huge mistake, especially because Congress would be out of the loop and this could have serious complications for the international community. The Dept. of Commerce's job is to promote sales with no regard to the possible consequences, therefore I strongly oppose this change.

General Comment

I want to express my strong opposition to switching the oversight of firearms sales to buyers in other countries from the State Department to the Department of Commerce. At least under State Department authority Congress is notified of such sales and can choose to block there for national security reasons even to countries with blatant human rights violations. The proposed change will likely make it easier for terrorists, criminal gangs and other dangerous organizations to get their hands on these weapons. As far as I can tell, the only people who will benefit from this change are the firearms manufacturers and the criminals who will be able to get firearms more easily.

General Comment

The approval of gun sales outside the US concerns me.

These guns may be used in acts of organized crime, political violence, terrorism, and human rights violations as well as an n crimes against American citizens.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The Commerce Department does not have adequate staffing to enforce regulation and monitoring. Moreover, enforcement of regulation in other domains would prove nearly impossible.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The U.S. State Department focuses on safeguarding our nation whereas the U.S. Commerce Department focuses on promoting American business. Clearly the concern of firearms in the wrong hands is of fundamental concern to the State Department, whereas the Commerce Department would only want to sell more arms abroa. We must insist that the security of our nation take precedence over the profits of some arms providers.

Firearms exports are rightly classified as military" and blocking sales of large batches of firearms to foreign countries is a reasonable control to prevent the unleashing of weapons into the hands of those who could cause serious harm to human rights, international relations, or even our own national security. Further, commercial export of large caches of American guns and ammunition could make it too easy for firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents to obtain enough weapons to wreak havoc around the world. These are serious concerns.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. Exporting firearms should be subject to more controls, not less! The Commerce Dept. is NOT ready or able to maintain the stringent controls and oversight that is needed to keep weapons trade restricted enough to handle export licensing, shipment inspections, and other appropriate restrictions on the types, quantities, and categories of firearms exports.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere.

This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

It would remove the State Departments block on the 3D printing of firearms.

When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Also...

More guns against America is more guns against America, no matter how thinly or big you slice it for

Republicans or for Democrats. Even the Trump administration should realize how destructive and dangerous this really is.

Hi - I believe that firearm sales outside of the US need to be monitored by the State Department and not by the Commerce Department. The State Department has many more resources worldwide to track large sales and shipments and to keep Congress up to date with any concerns. The Commerce Department does a great job monitoring the areas it is responsible for, but worldwide sales of American firearms should not be one of its responsibilities. Can you tell if a shipment or large sale went to Russia or Spain?? To Iraq or ISIS??? The State Department can.

Thank you for listening!

General Comment

Why would we switch the regulation of firearms exports from the State Department to the Commerce Department? Our government should not be in the business of promoting lethal firearm sales around the world. We should reducing

We must limit firearms exports to oppressive regimes, not encourage them. We must strengthen safeguards that help keep organized crime and terrorist organizations from obtaining weapons, not weaken them.

Why would our government eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them?

One good example of the danger of unregulated gun sales is the rampant smuggling of guns across the Mexican border. The vast amount of weapons easily available across the boarder, sourced from unregulated American gun shows has turned Mexico into a killing field. We do not need to promote the same death and destruction in other parts of the world by removing licensing requirements for brokers.

And removing the State Departments block on the 3D printing of firearms BY transferring the authority to the Department of Commerce is simply ridiculous.

General Comment

Do not remove the responsibility of regulating firearms for export from the State Department and move it to the Commerce Department. The State Department has a multi-layer oversight system with licensing and multiple inspections firmly in place, and the Commerce Department does not have the resources to provide the same protections. Moving the regulation of firearms exports to the Commerce Department would make the world a much more dangerous place. Do not allow the Commerce Department to take the responsibility of regulating firearms exports away from the State Department, which is handling the responsibility effectively.

I oppose switching the regulation of firearms exports from the Sate Department to the Commerce Department. Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This is an all around bad idea that would make everyone less safe.

I oppose moving the regulation of overseas gun sales from the State Department to the Commerce Department. Guns are for killing people. They are not commodities to be sold like soybeans. They are ugly, killing machines. They should NOT be treated as if they were harmless merchandise. Why are we as a nation promoting killing?

General Comment

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.

This would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them. There is no reason to remove these requirements. Also, it would remove licensing requirements for brokers, increasing the risk of trafficking. Finally, it would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less! Just watch the newly released video of the police department in Las Vegas being too scared to take out the gunmen on October first. They knew they were far out gunned. They know how dangerous and deadly guns are. Fifty-eight died, while the police were right in the building completely aware of where the shots were coming from. They did not stop the killing. Laws need to do more to better protect unarmed citizens, everyday.

General Comment

I am strongly opposed to the proposal to change the regulation of firearm sales from the state department to the department of commerce. A move like this would likely destabilize many other countries and places in the world by providing easier access to firearms with fewer regulations on who can purchase them and for what purpose. Firearm sales outside of the US are military deals and should be regulated and controlled tightly. I believe the state department is better equipped and prepared to provide this regulation than the commerce department.

Howdy,

Switching the responsibility for overseeing weapons sales from the State Dept to the Commerce Dept is a bad idea for these reasons:

- a) It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- b) It would remove licensing requirements for brokers, increasing the risk of trafficking.
- c) It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The world is dangerous enough. We don't need this change.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The U.S. Commerce Department is focused on promoting American business, not on safeguarding the nation, which is the responsibility of the U.S. State Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

General Comment

Thank you for considering this important concern. Currently, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

It is essential that this rule not be changed as it will not benefit national security or international relations and it will make the world a more dangerous place.

Public Comment 1034. Individual. Sean Kelly. 7-4-18

Submitter Information

Name: Sean Kelly

General Comment

I strongly oppose shifting firearms oversight from the State Department to the Commerce Department. Streamlining and encouraging the sale of firearms, and reducing inspections and enforcement, is solidly AGAINST the interests of the U.S.:

Internationally, high firearm availability correlates strongly with high firearm violence and fatalities. Making firearms more available WITHIN the U.S. by putting less scrutiny on shipments is the OPPOSITE of what we need to do in a climate of increasing criminal shooting acts.

Many of the most pressing international crises, from conflict in the middle east to the migration crisis from Central America, are fueled by violence utilizing American-made weapons. By making it easier to get American firearms abroad, we are only jeopardizing our OWN national interests.

While it is ultimately impossible to outright prevent individuals from acquiring information to design and/or manufacture firearms and components via 3D printing techniques, it is senseless to remove existing barriers to doing so. More firearms of questionable quality in the hands of more people with questionable training is an absolute recipe for disaster.

General Comment

This rule change will transfer regulation of foreign arms from the State Department to the Commerce Department - which does not have the resources necessary to keep track of these sales. This would be a major threat to our national security and fuel instability in other countries - increasing migration to the US. This rule needs to be rejected immediately.

General Comment

Firearms are dangerous and exist only to kill. They should be less available to all and certainly not exported for pure profit motives. People die daily from their existence. Making money off of the death of innocents is horrendous.

General Comment

The NRA only cares about making a buck. This switch could and most likely would benefit terrorist groups being funded by corrupt countries.

If the NRA gets their wish, all the countries weve unjustifiably attacked, who with good cause now hate us are certain to have top of the line weapons to kill us with.

General Comment

Arms sales need to be even more restricted and regulated, not less. US arms sales are contributing to massive terrorism and human rights abuse because of our loose oversight.

.The American people are sick of the control the NRA has over the legislators who swore to protect and uphold the will of the American people. The NRA is and operates as a criminal syndicate with the republican party as it's paid agent in congress.

General Comment

I strongly OPPOSE changing the classification of selling firearms to foreign countries that would switch such sales from the US State Dept. to the US Commerce Dept.

Selling weapons to other countries is not selling a commodity, like wheat; it is selling lethality and this needs the continued oversight of the State Dept.

I oppose any rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. I believe this would be an extremely dangerous, causing arms sales to vastly increase internationally, with serious implications for our national security.

If this change were made, firearms exports to oppressive regimes would be facilitated, safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons would be removed, and the violence that destabilizes countries and causes mass migration would be fueled!

Please oppose this terrible proposal, and help keep our country safe.

General Comment

It is INSANE to sell guns to everyone and not expect them to be turned on us! Please do NOT loosen the rules for firearms export, just to allow for greedy Corporate Profit.

Right now, firearms exports are classified as military (as they should be). This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

I oppose this rule change that would switch the regulation of firearms export from the US State Dept to the US Commerce Dept.

Controlling gun sales to foreign countries is important to countering terrorism, and for ensuring national safety. The US Commerce Dept does not have sufficient resources to regulate these foreign sales adequately. That responsibility should remain with the US State Dept.

I do not want the handling of export licenses of semiautomatic assault rifles and other powerful military style firearms moved from the U.S. State Department to the U.S. Commerce Department. Regardless of how profitable the sales of more US made weapons would be to our firearms manufacturers, producing and selling more weapons to more nations of our violent planet would ultimately undermine US safety and security. Criminals and terrorists would use these additional weapons to prey upon Americans and our friends abroad and in our own country. There are already too many weapons loose in the world already. I am a retired US Army combat veteran, and I served to protect my country and our allies and friends, not to promote the profits of GREEDY multi-national corporations. Furthermore, our arms industry should be completely nationalized in order to produce necessary weapons and military equipment for our forces and those of our allies at lower cost and remove the profit motive for selling weapons of war.

General Comment

Do not change policies to the commerce dept !!!! It is all about \$\$\$ and not safety. Guns kill in the wrong hands. This is not good. The world is evil enough without providing firearms to bad individuals. It is more than obvious. Too many people in office care more about how much money can be made in business transactions than the world wide safety of people and animal lives.

Every day someone in government is ripping apart government policies and trying to undo protections. Elected officials need to listen to the public and not the big greedy corporations.

Really sad that our American government can't even balance their own budget and continually waste so much money to the point of debt in the trillions of dollars.

Safety is not what the NRA and the gun industry are concerned with. It's sales. They don't care who shoots who, they only see their profit margin going through the roof. The only problem is there are already too many guns out there already. The only positive here is American weapons tend to jam more often than European and Asian weapons, so the American profit margin probably won't be as high as they would like. To that end, the American manufacturers will undoubtedly whine like babies about unfair competition. American manufacturers don't focus on efficiency, but rather mega sales; whereas, European and Asian manufacturers strive for efficiency. During WW2, the Luftwaffe had Rheinmetall design and build a 30MM cannon for their fighters that could take down a bomber with 5 to 7 rounds outside of the range of our 50 calibers and they did it. Bomber crews called it the Jackhammer and it terrified them. A Soviet Sergeant named Kalishnikov acquired a German machine gun on the Eastern front and made some modifications. It was used in the early part of the Korean Conflict and the Army wasn't concerned. After Shenyang got it and put a sealed receiver group in it, our Armed Forces became very concerned over this new weapon, that was to become the most widely used a popular weapon in the world today, the AK-47. Don't expect American weapons to replace that anytime soon.

We will keep speaking out and speaking out we will. Our schools are no longer safe why is that? We need to feel safe outside of our homes. People don't want to live in fear anymore. There is way to much shootings going on in America and that is not good. Whatever happened to safety first? Whatever happened to respect and common sense? Whatever happened to morals and values? Do tell? We all would like to know that now. This has gone on long enough now so changes need to be made to make our schools feel safe again. These families of victims are upset, angry and frustrated on how gun control is going. What laws we do have do not work anymore. Guns are not toys. Guns are dangerous. Criminals and guns don't mix. To many innocent lives have been taken. The NRA is not what it use to be. We are disappointed in our government and lawmakers. We don't feel safe anywhere anymore. Children don't feel safe in schools anymore. To many guns out there. There are no gun laws and people can do whatever they want why is that? How are we suppose to feel safe? How are our children suppose to feel safe? This all has gotten way out of control. We are feel upset, angry and frustrated. Why are you letting the NRA get away with this? We are looking out for the families that lost loved ones from these shootings. We all would like answers now. We all would like the truth now. We don't live in a safe America anymore. We need laws that work. We need strict gun laws now. To many shootings going on. No one seems to care anymore why is that? We will keep making noise until things change. People need to feel safe in parking lots, churches, play grounds, malls, stores, movie theatres, parks and anywhere else we are at. This has been a huge issue now. Nothing is being done to protect families, schools and everyday people. We all would like to know where these guns are coming from. Is this to much to ask?

General Comment

I am appalled at the idea of removing regulation of firearms exports, which would be the practical effect of having the Commerce Department "regulate" firearms sales. This opens the door to gun purchases by terrorists and repressive regimes, with no congressional oversight. Selling weapons to terrorists is a dumb way for gun manufacturers to make a buck, but obviously that's all they care about.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

Firearms are not mere commodities and the Commerce Department is unequipped to properly control their movement.

General Comment

The situation in the US is not normal, compared to all the other industrialised nations, it is almost primitive. the fact you have to have a gun in the US reflects on the US being an unsafe and unstable country. more guns is not an answer, rather just adding to the escalating problem of gun violence and gun deaths in the US. This problem is partly due to the accessibility of massive numbers of firearms in the US but also the mentality of the US population. The imperialistic nature of the US is also ingrained in the mentality of its own population, not just the government. it is generally manufactured fear, fear the is used to justify many things in the US. It is definitely a cultural thing. The 2nd amendment is constantly being misrepresented as well. thx

Trump & the NRA want to sell more guns, especially exports. They want it to be easier to export guns.

Guns are lethal weapons & are dangerous. There should be more regulations & controls, not less.

Therefore, I oppose the rule change that would switch the regulation of firearm exports from the US State Department to the US Commerce Department. The Commerce Dept is ill-equipped to handle the process.

General Comment

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. This transfer does almost nothing for the citizen while creating opportunity for industrial profit for the firearms industry and NRA. It also removes Congressional ability to oversee and help regulate fire arms sales.

Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey. Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

This rule change must be opposed and defeated for the safety of all people both in the US and the world.

General Comment

I am very concerned with proposed legislation to change the control of exporting firearms from the State Department to the Commerce Department. Some of the egregious effects would be:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.

It would remove licensing requirements for brokers, increasing the risk of trafficking.

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the glob

Most Sincerely

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

The State Department focuses on safeguarding our nation while the Commerce Department focuses primarily on promoting business.

In the case of firearms, safety should come first and foremost. The potential to move more weapons in the hands of additional dangerous people and regimes must be considered and immediately addressed. This is the first and easiest step to avoid that situation. Oppose the rule change!

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. It is clear that one of the reasons Mexico is having so many problems is because of the outflow of American firearms to the country. This rule change will facilitate the process in Mexico and other countries leading to more crime and more immigrants fleeing to the US:.

So now the NRA is trying to dictate foreign policy for our government and what to sell overseas. That is just how arrogant they are and how much they think they control this administration and Congress. This overreach by an organization that has grown into one that tries to control governments from the local to the national has to be stopped before they become the puppet master of our country. We can't allow an organization whose sole purpose is to put lethal weapons into the hands of as many people as possible to dictate policy to our leaders. Allowing increased exporting of assault weapons overseas just means that more insurgents will be using those weapons against us, our military forces and our allies forces, causing that many more deaths and injuries. Is that what you want to be known for? Allowing those young men to die or be wounded unnecessarily just to benefit one organization's lust for power? I can only hope not.

General Comment

I strongly oppose the above proposed rule. Having lived in the Caribbean for 23 years, I have seen what the influx of illegal weapons has done to destabilize governments. If anyone can buy these legally, we will exacerbate our contribution to the violence that is sending immigrants out of their homes into our country as a last resort for finding safety.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration.[4]

Here are more details on how the rule change would make the world a far more dangerous place:

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]

It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

This change should never take place.

Thank you, Mary Kuck

I had been under the impression that this administration was against foreign terrorists and foreign criminals who could hurt American citizens. Deregulating weapons sales to foreign buyers makes America less safe. Part of the mess in Afghanistan was because they had weapons we sold them when we were trying to take out the USSR. Then voila, Taliban!

Because we have legal gun ownership in this country, we have a very active market for guns and American-made weaponry is very high quality. Do we really want it to be easy for those weapons to get in the hands of the next Osama bin Laden?

Oh, I see. Obama killed bin Laden, therefore bin Laden must not have been that bad, and we should encourage more terrorists to continue erasing Obama's legacy. Because MAGA means Make America Vulnerable Again, right?

I am extremely. extremely opposed to moving oversight of export of weapons from the State Department to the Commerce Department. Given the situation in our own country and the situation in Mexico and Central American countries due to lax regulation on firearms in our country, this is exactly the wrong move in that it would enable the acceleration of gun violence. I strongly urge you to resist this move. We are at a time when more effective regulation on firearms is critical. We are not at a point where making more money on guns could possibly be beneficial to anyone other than the manufacturers. Please resist this change!

General Comment

I oppose the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

Switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

The rule change would make the world a far more dangerous place because:

1. It would eliminate the State Departments Blue Lantern program which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
2. It would remove licensing requirements for brokers, increasing the risk of trafficking.
3. It would remove the State Departments block on the 3D printing of firearms and enable 3D printing of firearms in the U.S. and around the globe.

Firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

We dont need more guns in the world or in the United States. We need more oversight to make sure the wrong people dont obtain guns and ammunition.

Why are we helping the US gun industry [NRA] with this proposed change? They should not be the ones to benefit at the incredible expense of innocent peoples safety.

This is morally wrong and unethical. Please do not make the rule change. Do not be beholden to the NRA and the gun industry just because they want to fill their pockets with the profits from the sales. Think of the innocent people who would be impacted adversely.

Firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations. They should be subject to more controls, not less!

General Comment

I oppose moving the regulation of firearms exports from the State Department to the Commerce Department. Doing so would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents such as organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration. This change is not in the best interest of our people, or anyone's people.

One detail about the change: the removal of the ban on the 3D-printing of firearms is simply not acceptable.

Please reject this change.

I am writing to implore you to prevent the rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. The United States should be a beacon of light for freedom and justice in the world, not a global supplier of weapons to increase brutality and human suffering. The U.S. Commerce Department should not be responsible for spreading murderous weapons around the world, which will undoubtedly end up being used cruelly against innocent people and likely against Americans as well.

General Comment

I oppose switching the regulation and exportation of any and all arms from the U.S. Department of State to the Department of Commerce. Such a move would enable the criminal elements in a society to exert even greater power over the law-abiding populations and increase person-to-person crime anywhere such guns are sold.

We must deal with the current problems we have in this country with daily senseless gun deaths and mass shootings and not export our arms and ammunition to other nations. In addition, we would be providing arms to criminal or terrorist elements that also wish us harm, and greater violence against our troops or people abroad would likely be carried out.

The U.S. State Department is much better suited to continue this role than the Commerce Department, which would seek profits for gun manufacturers anywhere and everywhere.

Please oppose this change and continue to carefully regulate any sale and export of guns and ammunition.

Thank you.

General Comment

Our family (from Ohio) opposes the proposed rule change to transfer firearms export regulations from the State Department to the Commerce Department. This is unnecessary government fiddling, and dangerous for America. Being driven by business interests (including the NRA and those who profit from arms sales), there is no reason for doing this that would be in the interest of the US or our security -- both national and international. The Commerce Department is ill-equipped to handle arms exports, making the US vulnerable to traffickers, criminals, and terrorists, and poorly or unregulated arms exportation could also lead to instability elsewhere, eventually building negative backlash for our country. (We already see the mass-migration problems formed partly from some of our foreign policies which now we can learn from or anticipate -- this is such a case.) There is simply no reason to make this change (except for profit for a small cadre of people), and many, many reasons not to do so that (which benefit the entire country). In sum, this is reckless and unnecessary, and it would create cost to American taxpayers for infrastructure changes that would be profligate and irresponsible.

General Comment

I oppose this rule change that would move the regulation of the export of firearms from the State Department to the Commerce Department. These weapons are military weapons and should remain that way. This move would eliminate the State Department's inspection program and public reporting. It would also remove licensing requirements for brokers which would very likely cause more trafficking, and it would remove the State Department's block on 3D printing of firearms. Congress would also have no oversight ability under this move. Therefore, the world would be less safe. I see this rule change as benefiting gun manufacturers only--there is no other benefit to this change. Keep the regulations where they belong--with the State Department.

oppose the proposed rule change that would declassify firearms as military and move the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department. Firearms are weapons, no matter how much organizations may want to call guns sport accessories , and are used to kill people. Moving the regulation of firearms exports from the State Department to the Commerce Department would make firearms exports to dangerous and autocratic regimes easier, remove safeguards that help keep agents like organized crime and terrorist organizations from getting weapons, and further fuel violence that destabilizes countries and causes mass migration. Firearms and weapons exports need more controls and export licensing requirements, not less. Government should not sell out to dangerous business interests that work against public safety interests. I Oppose this proposal.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business).[1] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries.[2] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.[3]

Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration

It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.[5]
It would remove licensing requirements for brokers, increasing the risk of trafficking.[6]

It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.[7]

General Comment

Moving the handling of export licenses of semiautomatic assault weapons and other firearms from the U.S. State Department (to the U.S. Commerce Department is a truly dumb idea. Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries. With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

This appears to be a move by the gun manufacturers to sell more guns with less oversight. I'm strongly opposed to this.

I oppose the rule change that would switch the regulation of firearms export from the State Dept. to the Commerce Dept. I believe the State Dept. better protects the American people, whereas the Commerce Dept. wants to aid businesses in selling as many guns as possible, regardless of where and to whom.

General Comment

The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department to the U.S. Commerce Department. This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

Here are more details on how the rule change would make the world a far more dangerous place:

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms. When Defense Distributed founder Cody Wilson posted online instructions for how to 3D print weapons, the State Department successfully charged him with violating arms export laws, since his open-source posting made it possible for anyone with access to a 3D printer, anywhere, to produce a lethal weapon. The rule switch would remove this block, effectively enabling 3D printing of firearms in the U.S. and around the globe.

Guns are an epidemic. Guns are a daily act of terrorism. Guns are a direct threat to our democracy. These facts require direct and significant action immediately. I am only able to support legislators and the parties they are members of that support aggressive gun regulation legislation.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

General Comment

We already have endured many instances in which our firearms were used by foreign nationals to kill our troops. We have also witnessed our firearms being used by terrorists, drug traffickers and extremist regimes to take innocent lives.

Although they haven't done a stellar job of safeguarding our soldiers or civilian populations, the Department of State must maintain control of international firearms sales, and foreign firearms sales must remain classified as "military" ... the Department of Commerce has no resources to even begin to measure the monumental risks involved in weapons export.

No matter how many people support this change, it must not be made.

I oppose this rule change that would switch the regulations of firearms export from the U.S. State Department to the U.S. Commerce Department.

I cannot believe this is even being considered. Guns and firearms are dangerous. They are used to kill people every day around the world in acts of organized crime, political violence, terrorism, and human rights violations.

If anything we need MORE oversight and controls, not less!

I write today to state my opposition to moving the regulation of firearms exports from the State Department to the Commerce Department.

Such change would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and contributes to mass migration.

- It would eliminate the State Departments Blue Lantern program, in place since 1940, which carries out hundreds of pre-license and post-shipment inspections and publicly reports on them.
- It would remove licensing requirements for brokers, increasing the risk of trafficking.
- It would remove the State Departments block on the 3D printing of firearms, effectively enabling 3D printing of firearms in the U.S. and around the globe.

The State Department has shown itself to be well equipped to perform this strategically important function. Together with Congress, it is in a unique position to thus protect this great nation from harm to national security that can result from large batch firearms sales to foreign countries.

There is nothing broken that could possibly be fixed by the moving the regulation of firearms exports from the State Department to the Commerce Department.

I received this disturbing message from MomsRising.org in my email. I agree with this organization about this:

"The NRA and gun manufacturers want guns everywhere, for everyone, not just here in the United States, but around the world. They are pushing hard for a rule change that would move the handling of export licenses of semiautomatic assault weapons and other powerful firearms from the U.S. State Department (focused on safeguarding our nation) to the U.S. Commerce Department (focused on promoting American business)...] This transfer of authority would open new floodgates for arms sales internationally, with serious implications for our national security.

"HERES THE LOW DOWN: Right now, firearms exports are classified as military. This is why they are under the regulation of the State Department, and why Congress can block sales of large batches of firearms to foreign countries...] With the rule change, Congress would no longer be automatically informed about sizable weapons sales that it could stop in the name of national security, even to countries where there are serious human rights concerns, such as the Philippines and Turkey.

"Meanwhile, the Commerce Department just does not have the resources to adequately enforce export controls. Its Bureau of Industry and Security does not have staff everywhere. This means that firearms traffickers, organized crime, terrorist organizations, and other violent and dangerous agents would face far fewer hurdles to obtaining large caches of American guns and ammunition.

"The bottom line is that switching the regulation of firearms exports from the State Department to the Commerce Department would facilitate firearms exports to oppressive regimes, remove safeguards that help keep extra-legal agents like organized crime and terrorist organizations from obtaining weapons, and further fuel violence that destabilizes countries and causes mass migration."

PLEASE, for the sake of America and the rest of the world, OPPOSE this rule change!

General Comment

I am strongly opposed to the unbridled commercialization of weapons sales. Our national security must not be bypassed by weapons manufacturers and arms dealers intent on boosting their sales wherever they can find buyers. It is bad enough right now, but removing the last vestige of US Dept of State control means uncontrolled flows of military weapons to the highest bidder.

Profits are not the only factor to consider here. Our national security, and security of our citizens around the world, are at stake. Keep international traffic in arms under the control of the U.S. Department of State.

Sincerely,
Linda Novenski

General Comment

This RULE would DESTROY any control of arms sales by Agencies(Congress,State Department,etc.) and hand off this responsibility to an agency(Commerce), that has MEAGER ABILITY, INSUFFICIENT PERSONNEL , and a mind set 180 degrees in opposition to NATIONAL SAFETY! "IF they have the cash..they get the guns.." this would be their maxim..a formula any GANGSTER, revolutionary, terrorist, etc. would love! Totally UNACCEPTABLE!

Please do not make this change! We need more oversight
Of gun trafficking not less. Do we really want to unleash
3D printed guns in the world? Do we really want to allow
Guns to be sold to oppressive governments? Sounds like
Oliver North learned nothing from his Iran contra days.
Look our president has continually expressed sympathy
And alignment its brutal dictators: kim jung un, Duarte,
And Putin to name a few. This is not what Americans
Want to be known for. We stand for freedom. Please do
Not take this action.
